# 1 SAFETY PRECAUTIONS

## 1.1. GENERAL GUIDELINES

1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

### 1.1.1. LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
  2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between  $1\Omega$  and  $5.2\Omega$ .
- When the exposed metal does not have a return path to the chassis, the reading must be  $\infty$ .

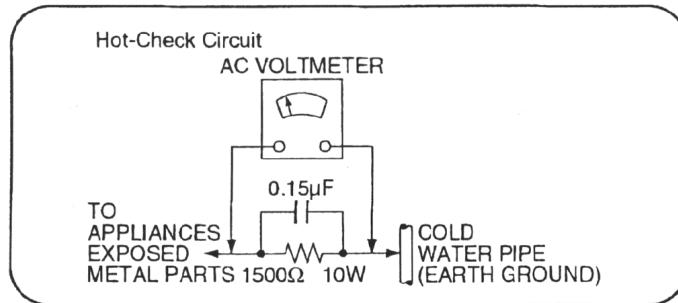

Fig. 1

### 1.1.2. LEAKAGE CURRENT HOT CHECK (See Figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a  $1.5k\Omega$ , 10 watts resistor, in parallel with a  $0.15\mu F$  capacitor, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in Figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

## 2 Caution for AC Mains Lead

### (For "EB" area code model only.)

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5-ampere and that it is approved by ASTA or BSI to BS1362.

Check for the ASTA mark  or the BSI mark  on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover, the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local dealer.

#### **CAUTION!**

IF THE FITTED MOULDED PLUG IS UNSUITABLE FOR THE SOCKET OUTLET IN YOUR HOME THEN THE FUSE SHOULD BE REMOVED AND THE PLUG CUT OFF AND DISPOSED OFF SAFELY.

THERE IS A DANGER OF SEVERE ELECTRICAL SHOCK IF THE CUT OFF PLUG IS INSERTED INTO ANY 13-AMPERE SOCKET.

If a new plug is to be fitted, please observe the wiring code as shown below.

If in any doubt please consult a qualified electrician.

#### **IMPORTANT**

The wires in this mains lead are coloured in accordance with the following code:

Blue: Neutral

Brown: Live

As these colours may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured Blue must be connected to the terminal which is marked with the letter N or coloured Black or Blue.

The wire which is coloured Brown must be connected to the terminal which is marked with the letter L or coloured Brown or Red.

**WARNING: DO NOT CONNECT EITHER WIRE TO THE EARTH TERMINAL WHICH IS MARKED WITH THE LETTER E, BY THE EARTH SYMBOL  OR COLOURED GREEN OR GREEN/YELLOW.**

**THIS PLUG IS NOT WATERPROOF—KEEP DRY.**

#### **Before use**

Remove the connector cover.

#### **How to replace the fuse**

The location of the fuse differ according to the type of AC mains plug (figures A and B). Confirm the AC mains plug fitted and follow the instructions below.

Illustrations may differ from actual AC mains plug.

1. Open the fuse cover with a screwdriver.

Figure A

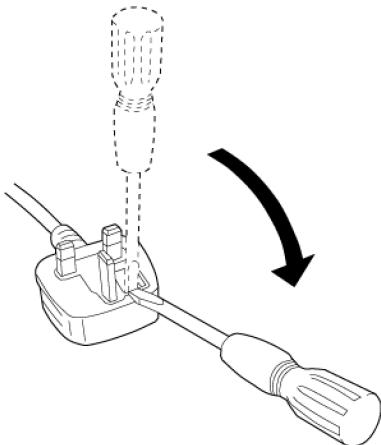

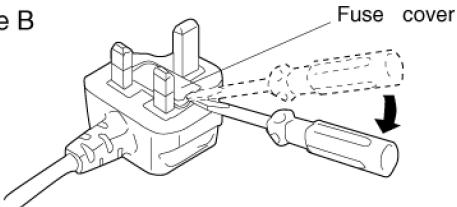

Figure B

2. Replace the fuse and close or attach the fuse cover.

Figure A

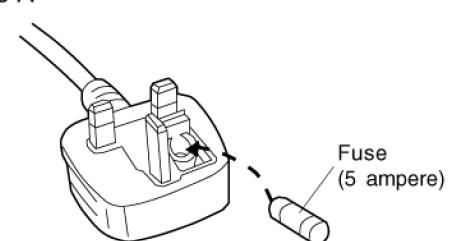

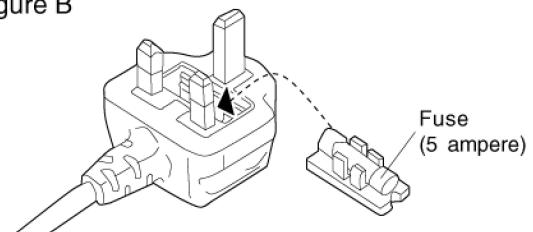

Figure B

### 3 Before Repair and Adjustment

Disconnect AC power, discharge Power Supply Capacitors C707, C717, C718 and C924 through a  $10\ \Omega$ , 10 W resistor to ground. DO NOT SHORT-CIRCUIT DIRECTLY (with a screwdriver blade, for instance), as this may destroy solid state devices.

After repairs are completed, restore power gradually using a variac, to avoid overcurrent.

- Current consumption at AC 230-240 V, 50 Hz in NO SIGNAL mode should be ~400 mA.

### 4 Protection Circuitry

The protection circuitry may have operated if either of the following conditions are noticed:

- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.

If this occurs, follow the procedure outlines below:

1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

**Note :**

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

### 5 Handling the Lead-free Solder

#### 5.1. About lead free solder (PbF)

**Distinction of PbF P.C.B.:**

P.C.B.s (manufactured) using lead free solder will have a PbF stamp on the P.C.B.

**Caution:**

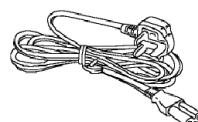

- Pb free solder has a higher melting point than standard solder; Typically the melting point is 50 - 70°F (30 - 40°C) higher. Please use a high temperature soldering iron. In case of soldering iron with temperature control, please set it to  $700 \pm 20^{\circ}\text{F}$  ( $370 \pm 10^{\circ}\text{C}$ ).
- Pb free solder will tend to splash when heated too high (about 1100°F/600°C).
- When soldering or unsoldering, please completely remove all of the solder on the pins or solder area, and be sure to heat the soldering points with the Pb free solder until it melts enough.

## 9 Self Diagnosis Display Function

This unit is equipped with the self diagnosis display function, which alarms faulty operation with error code. Use this function during servicing.

### 9.1. Automatically Displayed Error Codes

An error code automatically appears on the display (LCD) when faulty operation is detected. Refer to Fig. 9.1.

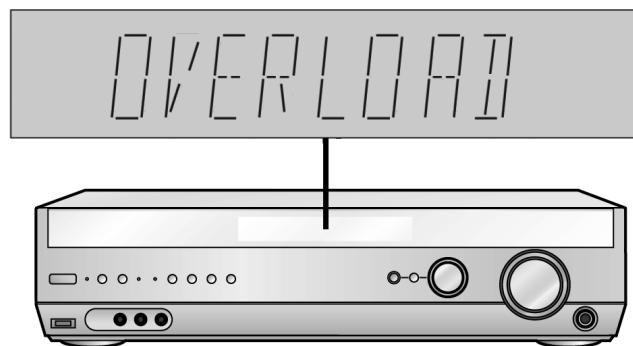

Fig. 9.1

### 9.2. Display Details

Refer to the following table.

LCD display	Symptom	Cause and Remedy
OVERLOAD	Speaker short, amplifier failure Humidity protection activated	Speaker short and failure in power amplifier, pre-amplifier circuits. Check for faulty parts and replace with new parts if necessary.
F70	Communication error between sub micro-processor and its peripheral LSI	Failure sub-micro processor and its peripherals LSI. Check for faulty parts and replace with new parts if necessary.
F76	When the power is turned on, the unit power automatically turns off; the power cannot be turned on.	Failure in the power circuit system of the unit. This may happen when the direct current electricity is supplied to speaker terminals. Check for the above and replace with new parts if necessary.

### 9.3. Returning to Normal Display

Press the POWER button on the unit to exit the function. The power is turned off.

### 9.4. Overload/Shutdown Detection Internal Condition

It detects OVERLOAD, POWER MALFUNCTION with [THRM\_DET], [SHORT\_DET] and [DC\_DET] input port. It detects the following condition depending on the input of the port as below table.

(H: DC ± 5V / L: DC ± 0V)

PROT			Detection of malfunction	Display and operation
SHORT_DET	THRM_DET	DC_DET		
H	L	H	Normal	-----
L	L	H	Speaker Short, Malfunction of Amplifier	[OVERLOAD] / POWER OFF
L	H	H	Detection of THERMAL PROTECTION	
-	-	L	Detection of POWER MALFUNCTION	[F76] / POWER OFF

### 9.5. Overload/Thermal Detection Display

When overload is detected, automatic POWER OFF will occur. But if any key on the remote control other than the [POWER] key is pressed before that (including the [HELP] key), the scroll display will show [SWITCH\_OFF\_POWER]. Then, 1 second after display of message, [OVERLOAD] will be shown on the scroll display.

# 10 Voltage Measurement and Waveform Chart

## Note:

- Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard.

Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.

- Circuit voltage and waveform described herein shall be regarded as reference information when probing defect point because it may differ from actual measuring value due to difference of Measuring instrument and its measuring condition and product itself.

- The voltage value and waveforms are the reference voltage of this unit measured by DC electronic voltmeter (high impedance) and oscilloscope on the basis of chassis. Accordingly, there may arise some error in voltage values and waveforms depending upon the internal impedance of the tester or the measuring unit.

**Importance safety notice :**

Components identified by  mark have special characteristics important for safety. Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used. When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

**Caution !**

IC, LSI and VLSI are sensitive to static electricity.

Secondary trouble can be prevented by taking care during repair.

- Cover the parts boxes made of plastics with aluminium foil.
- Put a conductive mat on the work table.
- Ground the soldering iron.
- Do not touch the pins of IC, LSI or VLSI with fingers directly.

The circuit diagram illustrates a complex feedback system involving four operational amplifiers (QR6101, QR6102, QR6151, QR6152) and associated components. The connections are as follows:

- Top Left:** QR6101 is configured as a non-inverting amplifier with a gain of 1 + R6121/R6122. Its output is fed into the non-inverting input of QR6102.
- Top Right:** QR6102 is configured as a voltage-controlled voltage source. Its output is fed into the inverting input of QR6101 and the non-inverting input of QR6151. It also provides a feedback path through R6123 and C6123 to the inverting input of QR6101.
- Middle Left:** QR6102's output is also fed into the inverting input of QR6151. QR6151 is configured as a non-inverting amplifier with a gain of 1 + R6171/R6172. Its output is fed into the non-inverting input of QR6152.
- Middle Right:** QR6151's output is fed into the inverting input of QR6152. QR6152 is configured as a voltage-controlled voltage source. Its output is fed into the inverting input of QR6151 and the non-inverting input of QR6101. It also provides a feedback path through R6173 and C6173 to the inverting input of QR6151.
- Bottom Right:** QR6152's output is fed into the inverting input of QR6101. A diode D6124 (B0ACK000005) is connected between the output of QR6102 and the inverting input of QR6101.
- Right Side:** A large feedback loop is formed by D6124, R6124, R6125, and D6125 (B0ACEM000009). This loop also includes R6174 and R6175, which provide additional feedback paths to the inverting inputs of QR6101 and QR6151 respectively.
- Capacitors:** Various capacitors (C6122, C6123, C6171, C6172, C6173) are used for AC coupling and filtering.

# 18 Parts Location and Replacement Parts List

Notes:

- Important safety notice:

Components identified by  mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardent (resistors), high-quality sound (capacitors), low noise (resistors), etc are used.

When replacing any of these components, be sure to use only manufacturer's specified parts shown in the parts list.

- The parenthesized indications in the Remarks columns specify the areas or colour. (Refer to the cover page for area or colour)

Parts without these indications can be used for all areas.

- Capacitor values are in microfarads ( $\mu\text{F}$ ) unless specified otherwise, P= Pico-farads ( $\text{pF}$ ), F= Farads.

- Resistance values are in ohms, unless specified otherwise, 1K=1,000 (OHM).

- The marking (RTL) indicates that the Retention Time is limited for this items. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of a availability is dependent on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

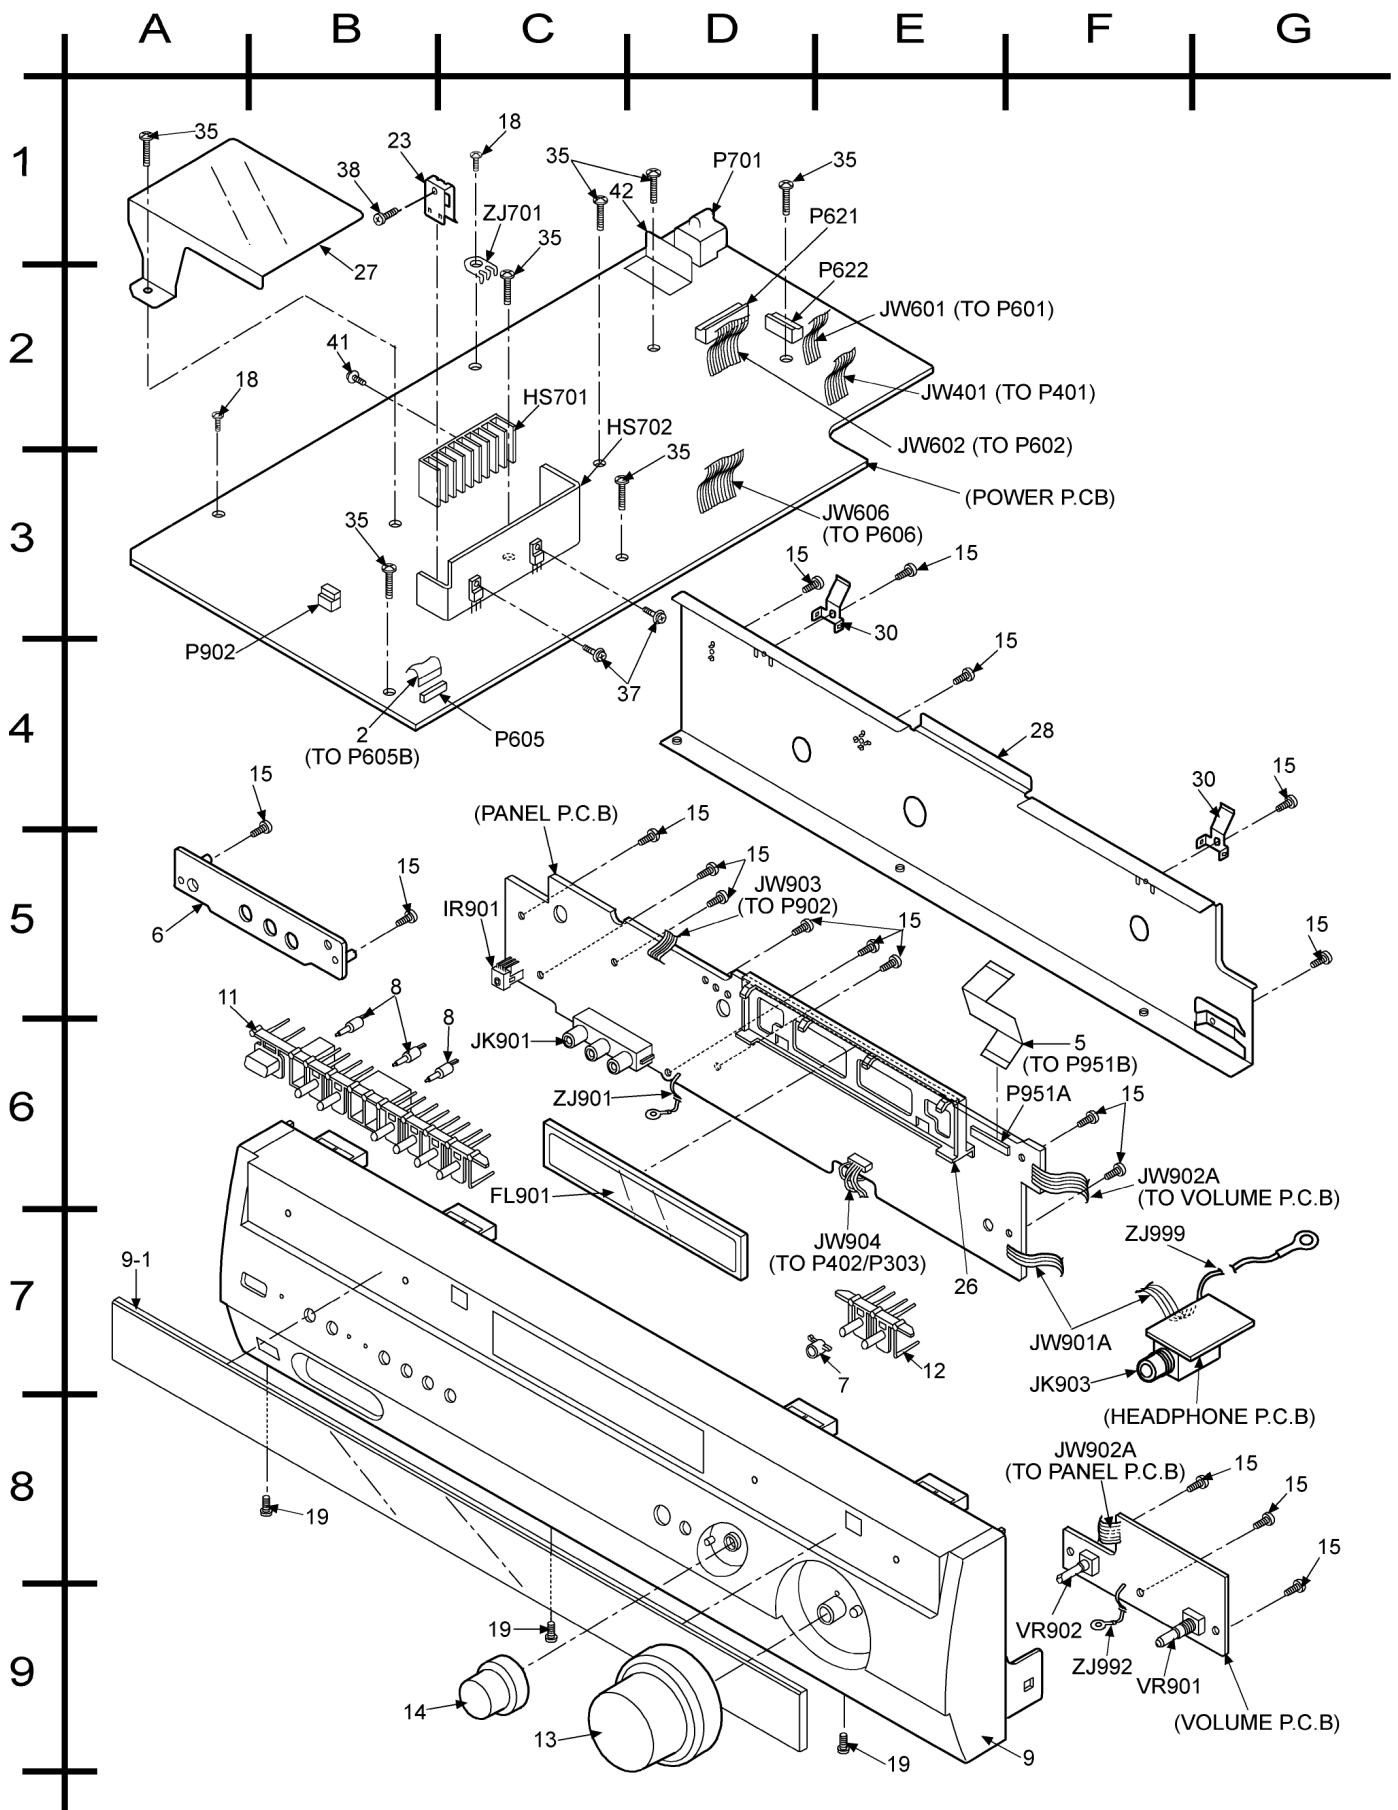

- [M] Indicates in the Remarks columns indicates parts supplied by **PAVCSCG**.
