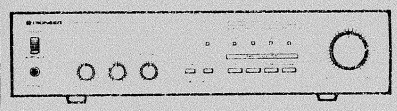
Service Manual



STEREO AMPLIFIER

A-110

MODEL A-110 COMES IN THREE VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Power requirement	Export destination
HE	AC220V, 240V (switchable)	European continent
HB	AC220V, 240V (switchable)	United Kingdom
HEZ	AC220V, 240V (switchable)	West Germany

- This service manual is applicable to the HE, HB and HEZ types.
- As to the HB and HEZ types, please refer to pages 12–16.

1. EXPLODED VIEWS AND PARTS LIST

NOTES:

- *Parts without part number cannot be supplied.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *For your parts Stock Control, the fast moving items are indicated with the marks ★★ and ★.*
  ★★ GENERALLY MOVES FASTER THAN ★
  This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*

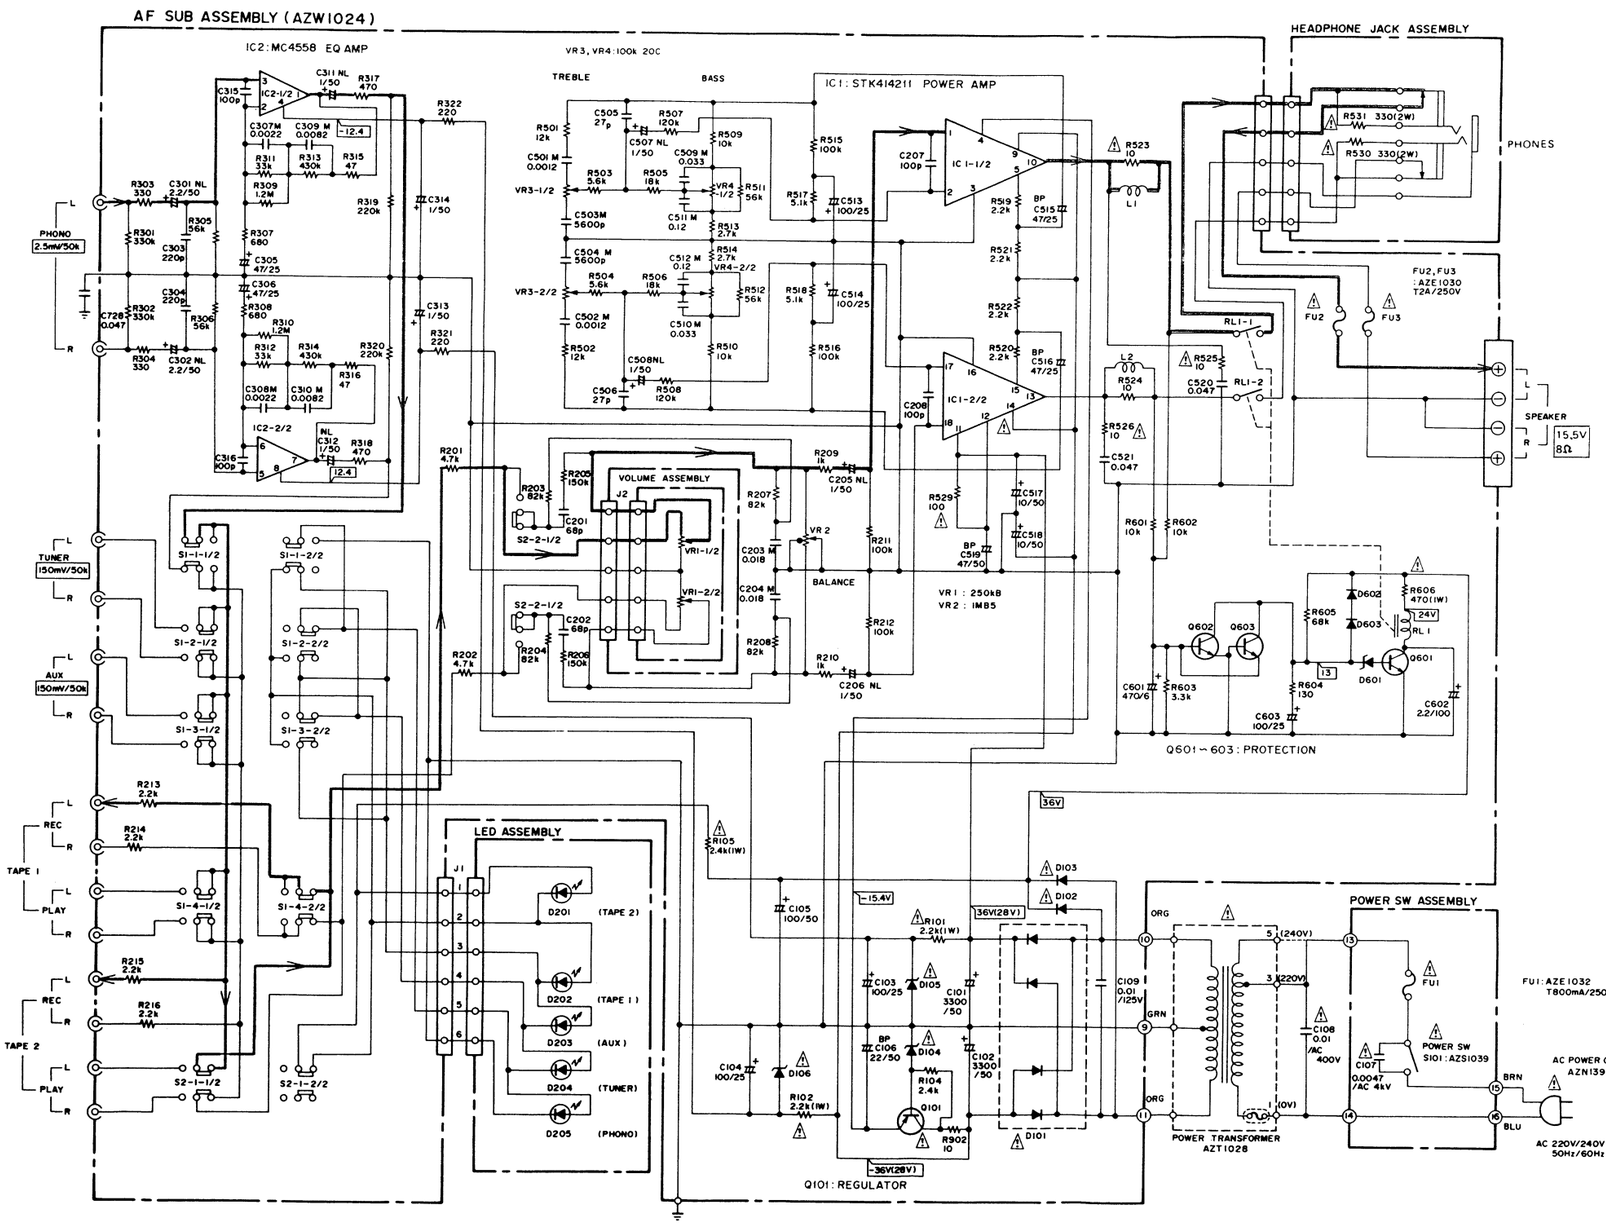
NOTE:
The indicated semiconductors are representative ones only. Other alternative semiconductors may be used and are listed in the parts list.



1. RESISTORS:
Indicated in Ω, ¼W, ½W; ±5% tolerance unless otherwise noted k: kΩ, M: MΩ, (F): ±1%, (G): ±2%, (K): ±10% (M): ±20% tolerance

2. CAPACITORS:
Indicated in capacity (μF)/voltage (V) unless otherwise noted p: pF
Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE, CURRENT:
▭: Signal voltage at (30W + 30W/8 ohm) out (1kHz)
▱: DC voltage (V) at no input signal
Value in ( ) is DC voltage at rated power.
⇦mA: DC current at no input signal

4. OTHERS:
➡: Signal route.
⊘: Adjusting point.
The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
※ marked capacitors and resistors have parts numbers.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

Line voltage can be changed with the following steps.

1. Disconnect the AC power cord.
2. Remove the top cover.
3. Change the connection of the power transformer primary taps.
4. Stick the line voltage label on the rear panel.

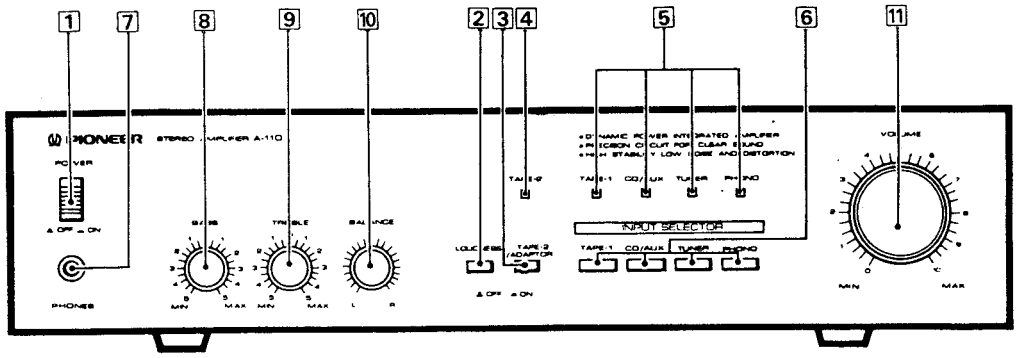
10. FRONT PANEL FACILITIES



1 POWER switch

Press to turn power to the unit ON and OFF.

2 LOUDNESS switch

Press to activate the loudness function when listening to music at a low volume: the low and high tones will be emphasized to render sounds rich in power and fullness even at low volume levels.

3 TAPE 2/ADAPTOR switch

Press when using a second tape deck or other adaptor equipment, such as a graphic equalizer, that has been connected to the unit by means of the TAPE 2/ADAPTOR terminals on the rear panel.

4 TAPE 2/ADAPTOR indicator

Illuminates when the TAPE 2/ADAPTOR switch is ON.

5 Function indicators

Illuminate to show which function is currently active, i.e. which function switch has been pressed.

NOTE:
The TAPE 1 indicator will illuminate when none of the INPUT SELECTOR switches has been pressed.

6 INPUT SELECTOR switches

PHONO: Press when you want to listen to records on a turntable.

TUNER: Press when you want to listen to AM or FM radio broadcasts with a tuner.

CD/AUX: Press when you want to listen to the sound from a CD player or other component, such as a TV, connected to the CD/AUX terminal.

TAPE 1: Press when you want to listen to tape playback from a tape deck.

7 PHONES jack

When using headphones, insert their plug into this jack.

NOTE:
Don't forget to turn the volume down before listening to headphones: turning the volume up too high can result in serious damage to your ears.

8 BASS tone control

Use to adjust low frequency range tones. The center position is the flat (normal) position. Rotating this knob to the right will cause low-frequency tones to be emphasized, while rotating it to the left will cause them to be suppressed.

9 TREBLE tone control

Use to adjust high frequency range tones. The center position is the flat (normal) position. Rotating this knob to the right will cause high-frequency tones to be emphasized, while rotating it to the left will cause them to be suppressed.

10 BALANCE control

Use to adjust the volume balance between the left and right speaker channels. This knob should normally be left in the center position and is generally used only when the sound from one speaker is louder than the sound from the other. In such cases, turn the knob in the opposite direction of the louder speaker to achieve uniform volume from both speakers.

11 VOLUME control

Use to adjust the volume level; rotating it clockwise increases the volume. No sound will be emitted when set to the "0" position, and maximum volume will be output when set to the "10" position.
