# SAFETY INFORMATION

A

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

■ Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

## WARNING

B This product may contain a chemical known to the State of California to cause cancer, or birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

C

### CAUTION

This product is a class 1 laser product classified under the Safety of laser products, IEC 60825-1:2007.

**CLASS 1 LASER PRODUCT**

D58-5-2-2a\_A1\_En

D

### IMPORTANT

THIS PIONEER APPARATUS CONTAINS LASER OF CLASS 1.  
SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUCTED PERSON.

### Laser Pickup specifications and Laser characteristics

For CD	Wave length (typ) : 790 nm Operation output : 4 mW CW, Class 1 Maximum output : Class 1 (Under fault condition)
--------	---

E

### Additional Laser Caution

#### 1. Laser Interlock Mechanism

The position of the switch (S1702) for detecting loading completion is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch is not in LPS1 terminal side (when the mechanism is not clamped and LPS1 signal is high level.)

Thus, the interlock will no longer function if the switch is deliberately set to LPS1 terminal side.

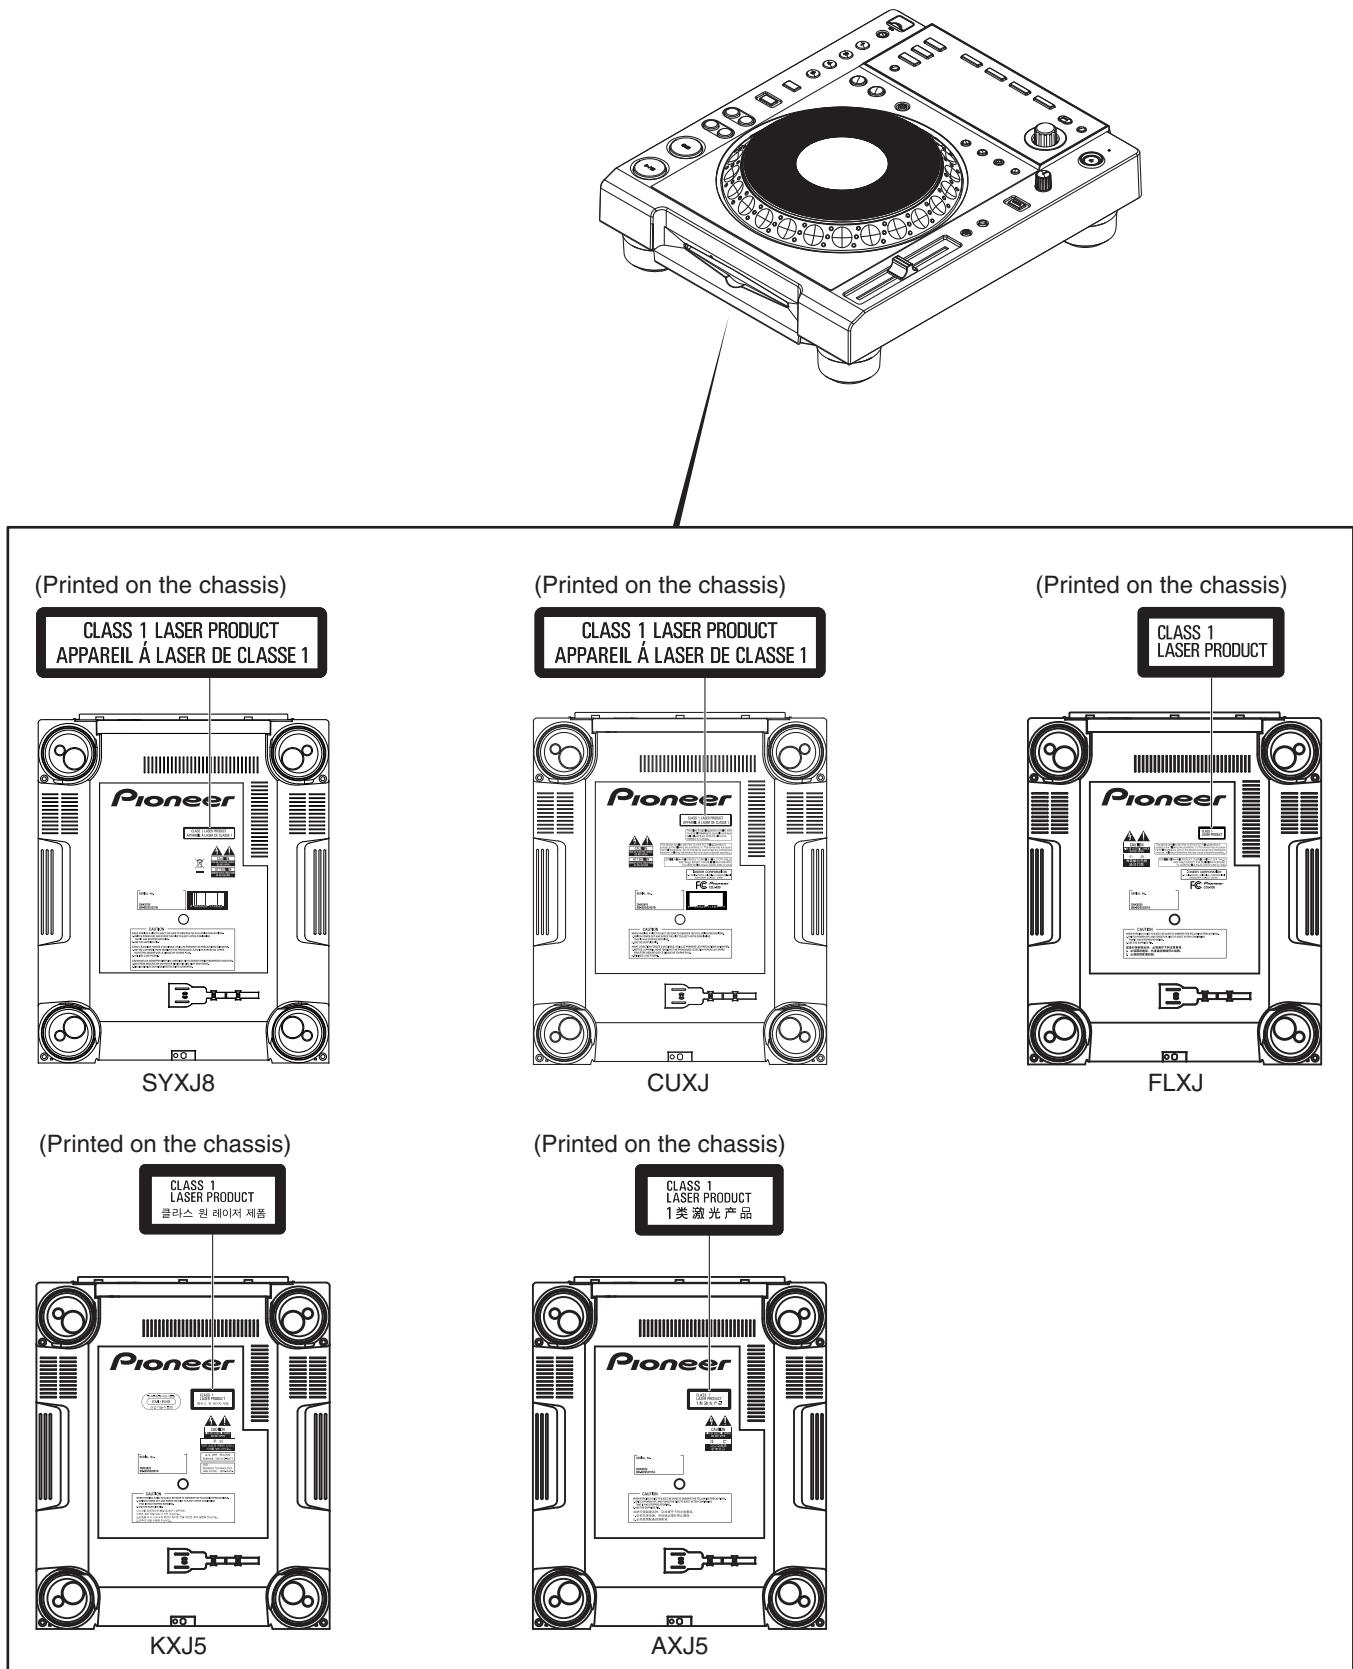

(if LPS1 signal is low level).

In the Service mode the interlock mechanism will not function. Laser diode oscillation will continue, if pin 41 of TC94A15FG (IC201) on the MAIN Assy is connected to GND, or else the terminals of Q201 are shorted to each other (fault condition).

2. When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

F

## LABEL CHECK

A

## [Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.  
Please be sure to confirm and follow these procedures.

### 1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.  
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.  
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.  
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.  
Please pay attention to your surroundings and repair safely.

### 2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.  
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

E

### 3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.  
Make sure the proper amount is applied.

### 4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

### 5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

# 1. SERVICE PRECAUTIONS

## 1.1 NOTES ON SOLDERING

- A
- For environmental protection, lead-free solder is used on the printed circuit boards mounted in this unit. Be sure to use lead-free solder and a soldering iron that can meet specifications for use with lead-free solders for repairs accompanied by reworking of soldering.
  - Compared with conventional eutectic solders, lead-free solders have higher melting points, by approximately 40 °C. Therefore, for lead-free soldering, the tip temperature of a soldering iron must be set to around 373 °C in general, although the temperature depends on the heat capacity of the PC board on which reworking is required and the weight of the tip of the soldering iron.

Do NOT use a soldering iron whose tip temperature cannot be controlled.

- B
- Compared with eutectic solders, lead-free solders have higher bond strengths but slower wetting times and higher melting temperatures (hard to melt/easy to harden).

The following lead-free solders are available as service parts:

- Parts numbers of lead-free solder:
  - GYP1006 1.0 in dia.
  - GYP1007 0.6 in dia.
  - GYP1008 0.3 in dia.

C

## 1.2 ABOUT POWER SUPPLY MONITORING

This unit always monitors for power failure and will shut itself off immediately after an error is detected. If an error is generated, the STANDBY LED will flash after the unit shuts itself off. After the unit shuts itself off because of an error, unplug the AC power

- D
- cord and wait 1 minute before turning the unit ON by pressing the STANDBY/ON key.
  - Repair the unit, according to "5.5 ABOUT POWER SUPPLY MONITORING."

E

F

## 2. SPECIFICATIONS

### 2.1 SPECIFICATIONS

Power requirements.....	AC 220 V to 240 V, 50 Hz/ 60 Hz (SYXJ8)	A
	AC 120 V, 60 Hz (CUXJ)	
	AC 110 V to 240 V, 50 Hz/ 60 Hz (FLXJ)	
	AC 220 V, 60 Hz (KXJ5)	
	AC 220 V to 240 V, 50 Hz/ 60 Hz (AXJ5)	
Power consumption.....	21 W	
Power consumption (standby).....	0.4 W	
Main unit weight.....	2.3 kg	
Max. dimensions.....	305 mm (W) x 105.5 mm (H) x 364.4 mm (D) (12 in. (W) x 4.2 in. (H) x 14.3 in. (D))	
Tolerable operating temperature.....	+5 °C to +35 °C (+41 °F to +95 °F)	
Tolerable operating humidity.....	5 % to 85 % (no condensation)	

#### Analog audio output (AUDIO OUT L/ R)

Output terminal.....	RCA terminal	
Output Level.....	2.0 Vrms (1 kHz)	
Frequency response.....	4 Hz to 20 kHz	
S/ N ratio.....	115 dB	
Total harmonic distortion.....	0.003 %	

#### USB downstream section (USB)

Port.....	Type A	
Power supply.....	5 V/ 500 mA or less	

#### USB upstream section (USB)

Port.....	Type B	C

## 2.2 USABLE DISCS AND USB DEVICES

### A About discs

This unit can play the discs shown below.

Type	Mark <sup>[1]</sup>	Compatible formats
CD		<ul style="list-style-type: none"> <li>Music CD (CD-DA)</li> </ul>
CD-R		<ul style="list-style-type: none"> <li>Music CD (CD-DA)</li> <li>MP3</li> <li>AAC</li> <li>WAV</li> <li>AIFF</li> </ul>
CD-RW		Music CD (CD-DA)

[1] Discs on which the marks on this table are indicated on the disc label, package or jacket can be played.

[2] Titles, album names and artist names recorded in the CD-Text data are displayed. When multiple text data are recorded on the disc, the information for the first text data is displayed.

### ❖ Discs that cannot be played

- DTS-CD
- Photo CDs
- Video CDs
- CD Graphics (CD-G) discs
- Unfinalized CDs
- DVD

### ❖ About CD-R/-RW discs

Music files (MP3/AAC/WAV/AIFF) recorded on CD-R/-RW discs can be played.

Folder layers	Max. 8 levels (files in folders beyond the 8th level cannot be played)
Max. number of folders	1 000 folders
Max. number of files	1 000 files

When there are many folders or files, some time may be required for loading.

### ❖ About discs created on computers

Depending on the application settings and the computer's environmental settings, it may not be possible to play certain discs. Record the disc in a format supported on this unit. For details, contact your application's retailer.

If the recording quality is poor due to the disc's properties, scratches or dirt on the disc or dirt on the recording lens, it may not be possible to play the disc.

### ❖ Creating backup discs

When CD-R/-RW discs are paused or left in the pause mode at cue points for long periods of time, it may become difficult to play the disc at that point, due to the properties of the disc. Also, when a specific point is looped repeatedly an extremely large number of times, it may become difficult to play that point.

When playing valuable discs, we recommend making backup discs.

### ❖ About Copy Control CDs and DualDiscs

This unit is designed to CD standards. Operation and performance of discs with standards other than CD standards is not guaranteed.

### ❖ About 8 cm single CDs

8 cm single CDs cannot be played on the CDJ-850. Do not mount 8 cm adapters on CDs and play them on the CDJ-850. The adapter could fall off as the disc spins, damaging the disc or the player.

## About USB devices

This unit supports USB mass storage class USB devices (external hard disks, portable flash memory devices, digital audio players, etc.).

Folder layers	Max. 8 layers
Max. number of folders	1 000 folders
Max. number of files	10 000 files (1 000 files for files not managed by rekordbox)
Supported file systems	FAT16, FAT32 and HFS+ (NTFS is not supported.)

When there are many folders or files, some time may be required for loading.  
Folders and files exceeding the limits cannot be displayed.

### ❖ USB devices that cannot be used

- Optical disk type devices such as external DVD/CD drives, etc., are not supported.
- USB hubs cannot be used.

## Playable music file formats

This unit supports music files in the formats shown below.

Type	File extension	Compatible formats	Bit depth	Bit rate	Sampling frequency	Encoding method
MP3	.mp3	MPEG-1	16 bit	32 kbps to 320 kbps	32 kHz, 44.1 kHz, 48 kHz	CBR, VBR
AAC	.m4a, .aac and .mp4	MPEG-4 AAC LC	16 bit	16 kbps to 320 kbps	32 kHz, 44.1 kHz, 48 kHz	CBR, VBR
WAV	.wav	WAV	16 bit, 24 bit	—	44.1 kHz, 48 kHz	Uncompressed PCM
AIFF	.aif, .aiff	AIFF	16 bit, 24 bit	—	44.1 kHz, 48 kHz	Uncompressed PCM

### About MP3 files

MP3 files can have a constant bit rate (CBR) or a variable bit rate (VBR). Both types of files can be played on the CDJ-850, but the search and super fast search functions are slower with VBR files. If your priority is operability, we recommend recording MP3 files in CBR.

### ❖ Cautions on using USB devices

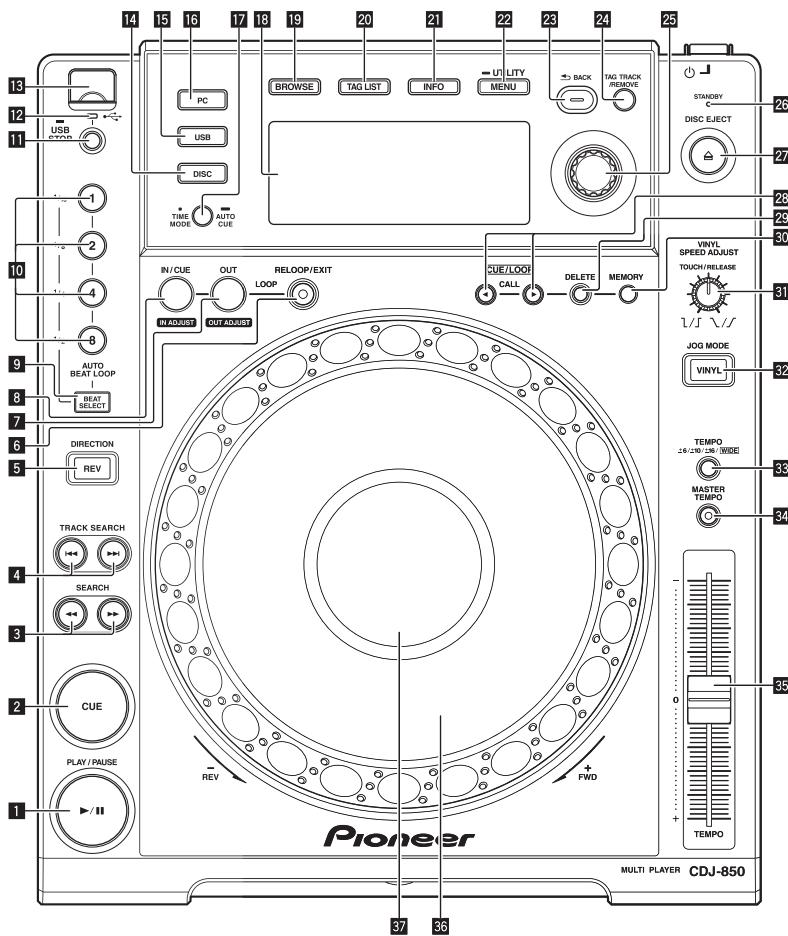

- Some USB devices may not operate properly. Please note that Pioneer will accept no responsibility whatsoever for loss of data recorded on USB devices.
- It may happen that, when a current above the allowable level is detected in this unit's USB port, the [USB STOP] indicator flashes, the power supply to the USB device is cut off and communications with the USB device are interrupted. To restore normal operation, disconnect the USB device from this unit. Avoid reusing USB devices for which an excess current has been detected. If normal operation is not restored (if communications cannot be established) after the above procedure is performed, try turning off this unit's power then turning it back on.
- If multiple partitions are set for the USB device, the device may not be recognized.
- USB devices equipped with flash card readers may not operate.
- Depending on the USB device you are using, the desired performance may not be achieved.

### About AAC files

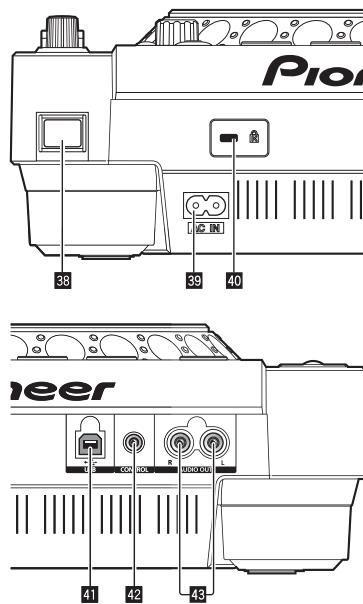

- AAC is the abbreviation of "Advanced Audio Coding", a basic format of audio compression technology used for MPEG-2 and MPEG-4.
- The file format and extension of AAC data depends on the application used to create the data.
- In addition to AAC files with the extension ".m4a" encoded with iTunes®, files with the extensions ".aac" and ".mp4" can also be played. Note, however, that copyright-protected AAC files purchased for example at the iTunes Music Store cannot be played. Also, some files may not be playable, depending on the version of iTunes used for encoding.

## 2.3 PANEL FACILITIES

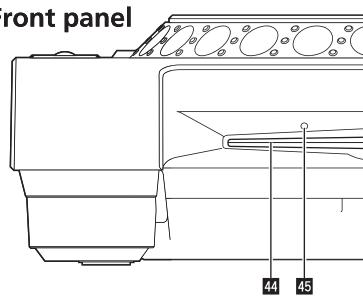

### A Control panel

### B Rear panel

### C Front panel

### D Control panel

#### 1 PLAY/PAUSE ▶/II

Use this to play/pause tracks.

- During playback, the indicator lights.
- When in the pause mode, the indicator flashes.

#### 2 CUE

Use this to set and check cue points.

- When a cue point is set, the indicator lights.
- When in the pause mode, the indicator flashes.

#### 3 SEARCH ◀◀, ▶▶

The track is forwarded/reversed while the button is held in.

#### 4 TRACK SEARCH ▲▲, ▼▼

Use these to search for the beginnings of tracks.

#### 5 DIRECTION REV

Use this to turn reverse playback on and off.

#### 6 RELOOP/EXIT

Use this to return to loop playback (reloop) or cancel loop playback (loop exit).

#### 7 LOOP OUT (OUT ADJUST)

Use this to set and fine-adjust the loop out point.

#### 8 LOOP IN/CUE (IN ADJUST)

Use this to set and fine-adjust the loop in point.

#### 9 BEAT SELECT

Use this to set the number of beats for auto beat loop playback.

#### 10 AUTO BEAT LOOP (1, 2, 4, 8)

Use these to set the loop automatically according to the track's tempo (auto beat loop).

#### 11 USB STOP

Press for at least 2 seconds before disconnecting the USB device.

#### 12 USB indicator

This flashes when this unit is communicating with the USB device.

#### 13 USB device insertion slot

Load the USB device here.

#### 14 DISC

Press this to play the music files on a CD or CD-ROM.

#### 15 USB

Press this to play the music files on a USB device.

#### 16 PC

Press this to use DJ software.

#### 17 TIME MODE (AUTO CUE)

- When pressed once, the main unit display's time display mode (remaining time display or elapsed time display) switches.
- When pressed for over 1 second, auto cue turns on and off.

**18 Main unit display**

**19 BROWSE**

Press this to display the [BROWSE] screen.

**20 TAG LIST**

Press this to display the [TAG LIST] screen.

**21 INFO**

Press this to display the [INFO] screen.

**22 MENU (UTILITY)**

- When pressed once, the menu screen is displayed.
- The [UTILITY] screen is displayed when this is pressed for over 1 second.

**23 BACK**

- Press this once to return to the previous screen.
- Press for over 1 second to move to the top layer.

**24 TAG TRACK/REMOVE**

Use these to add and remove tracks from the tag list.

**25 Rotary selector**

- Turn the rotary selector to select tracks or folders.
- Press the rotary selector to enter.

**26 STANDBY indicator**

This lights when the auto standby function is activated.

**27 DISC EJECT ▲**

Use this to eject discs.

**28 CUE/LOOP CALL ▲/▼**

Use these to call out cue and loop points stored on the USB device.

**29 DELETE**

Use this to delete cue and loop points stored on the USB device.

**30 MEMORY**

Use this to store cue and loop points on the USB device.

**31 VINYL SPEED ADJUST TOUCH/RELEASE**

Use this to adjust the speed at which playback slows down and stops when the top of the jog dial is pressed and the speed at which normal playback resumes when the top of the jog dial is released.

**32 VINYL (JOG MODE)**

Use this to switch the jog dial mode.

**33 TEMPO ±6, ±10, ±16, WIDE**

Use this to switch the playing speed adjustment range.

**34 MASTER TEMPO**

Use this to turn the master tempo function on and off.

**35 TEMPO**

Use this to adjust the track playing speed.

**36 Jog dial**

This can be used for such operations as scratching, pitch bending, etc.

**37 Jog dial display section**

---

## Rear panel

**38 Ⓜ (power switch)**

This switches this unit's power between on and standby.

**39 AC IN**

Connect this to a power outlet.

Connect the power cord after all the connections between devices have been completed.

Be sure to use the included power cord.

**40 Kensington security slot**

**41 USB**

Connect to a computer.

**42 CONTROL**

Connect the control cord (included) here.

**43 AUDIO OUT L/R**

Connect the audio cables (included) here.

---

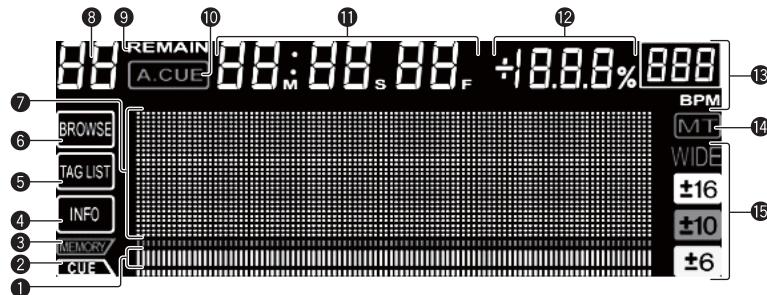

## Front panel

**44 Disc insertion slot**

**45 Disc force eject pin insertion hole**

A

## Main unit display

B

### ① Playing address display

The track is displayed as a bar graph. Turns off from the left side when the remaining time is displayed. The entire graph flashes slowly when the remaining track time is under 30 seconds, then flashes quickly when the remaining track time is under 15 seconds.

### ② CUE

The positions of currently set cue and loop points are displayed as marks.

### ③ MEMORY

Cue and loop points recorded on USB devices are displayed as marks.

### ④ INFO

This lights when the [INFO] screen is displayed.

### ⑤ TAG LIST

This lights when the [TAG LIST] screen is displayed.

### ⑥ BROWSE

This lights when the [BROWSE] screen is displayed.

### ⑦ Information display section

The characters that can be displayed are letters A to Z, numbers 0 to 9 and certain symbols. "?" is displayed for other characters.

D

### ⑧ Track number

This displays the track number. It is not possible to display more than 100 tracks.

### ⑨ REMAIN

This lights when the time display is set to the remaining time.

### ⑩ A.CUE

This lights when auto cue is set.

### ⑪ M, S, F (time display)

"M" indicates minutes, "S" seconds, "F" frames. There are 75 frames to a second.

### ⑫ % (playing speed display)

This indicates the percentage by which the playing speed is changed.

### ⑬ BPM

Displays BPM (Beats Per Minute) of the track currently being played.

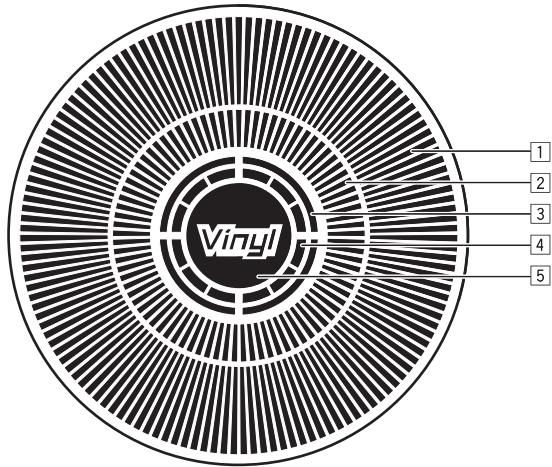

### ⑭ MT

This lights when the master tempo is set.

### ⑮ WIDE, ±16, ±10, ±6

This indicates the range by which the playing speed can be adjusted.

## Jog dial display section

E

### ③ Audio memory status display

This flashes when the audio memory is being written. It stops flashing, remaining lit, when writing is completed. It may not be possible to perform the real time cue operation while the audio memory is being written. The display also flashes when there is not enough memory due to scratch play.

### ④ Jog touch detection display

When the jog mode is set to VINYL, the top of the jog dial lights when pressed.

### ⑤ VINYL

This lights when the jog mode is set to VINYL.

F

### ① Operation display

This indicates the playing position, with one revolution equal to 135 frames. It turns during playback and stops in the pause mode.

### ② Cue point display

### 3. BASIC ITEMS FOR SERVICE

#### 3.1 CHECK POINTS AFTER SERVICING

##### Items to be checked after servicing / CDJ

To keep the product quality after servicing, confirm recommended check points shown below.

No.	Procedures	Check points
1	Confirm whether the customer complain has been solved. If the customer complain occurs with the specific disc, use it for the operation check.	The customer complain must not be reappeared. Audio and operations must be normal.
2	Check output analog audio.	Audio and operations must be normal.
3	Play back a CD. (track search)	Audio, Search and operations must be normal.
4	Check the connection of each interface.	
	Play back data contained in the device connected to USB A. USB B	Audio, Search and operations must be normal. The device must be recognized by the PC.
5	Check output signals while the JOG dial or TEMPO slider is being operated.	Audio and operations must be normal.
6	Check the appearance of the product.	No scratches or dirt on its appearance after receiving it for service.

See the table below for the items to be checked regarding video and audio.

Item to be checked regarding audio
Distortion
Noise
Volume too low
Volume too high
Volume fluctuating
Sound interrupted

#### 3.2 JIGS LIST

##### Jigs List

Jig Name	Part No.	Purpose of use / Remarks
CD test disc	STD-905	CD playback diagnosis

##### Lubricants and Glues List

Name	Part No.	Remarks
Lubricating oil	GYA1001	Refer to "9.4 JOG DIAL SECTION", "9.5 SLOTIN MECHA SECTION".
Lubricating oil	ZLB-HFD1600	Refer to "9.4 JOG DIAL SECTION".
Dyfree	GEM1036	Refer to "9.5 SLOTIN MECHA SECTION".

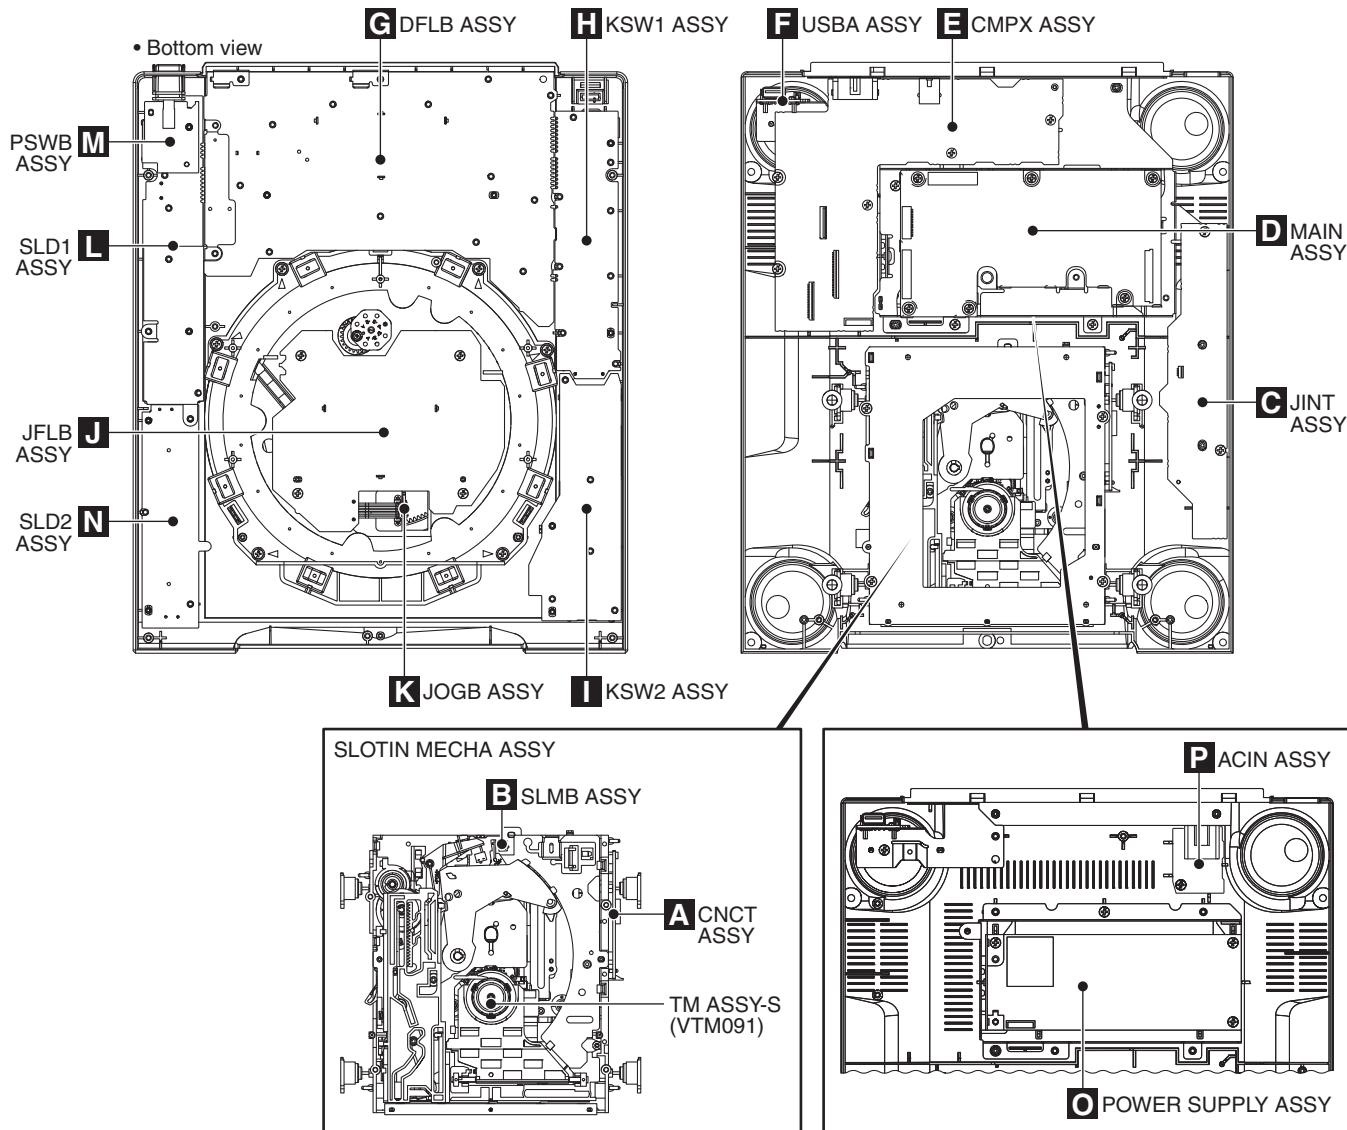

##### Cleaning

Before shipping out the product, be sure to clean the following positions by using the prescribed cleaning tools.

Position to be cleaned	Name	Part No.	Remarks
Pickup lenses	Cleaning liquied	GEM1004	Refer to "9.5 SLOTIN MECHA SECTION".
	Cleaning paper	GED-008	

### 3.3 PCB LOCATIONS

**NOTES:**

- Parts marked by “NSP” are generally unavailable because they are not in our Master Spare Parts List.
- The mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

Mark	No.	Description	Part No.	Mark	No.	Description	Part No.
<b>LIST OF ASSEMBLIES</b>							
E	1..MAIN ASSY		DWX3174		2..JOGB ASSY		DWX3155
NSP	1..SUB1 ASSY (SYXJ8, FLXJ, KXJ5, AXJ5)	DWM2399		2..ACIN ASSY (SYXJ8, FLXJ, KXJ5, AXJ5)	DWX3158		
NSP	1..SUB1 ASSY (CUXJ)	DWM2405		2..ACIN ASSY (CUXJ)	DWX3173		
NSP	2..KSW1 ASSY	DWS1422		NSP	1..SUB2 ASSY		DWM2400
NSP	2..SLD1 ASSY	DWS1423		2..CNCT ASSY		DWX3151	
	2..PSWB ASSY	DWS1424		2..CMPX ASSY		DWX3153	
	2..SLMB ASSY	DWS1425		2..USBA ASSY		DWX3156	
	2..KSW2 ASSY	DWS1426		2..JINT ASSY		DWX3157	
	2..SLD2 ASSY	DWS1427		△	1..POWER SUPPLY ASSY		DWR1463
	2..DFLB ASSY	DWX3152 *		NSP	1..SLOTIN MECHA ASSY		DXA2206
	2..JFLB ASSY	DWX3154			1..TM ASSY-S (VTM091)		DXX2616

\* The service part of DFLB Assy (DWX3152) is supplied with KSW1 Assy (DWS1422) and SLD1 Assy (DWS1423). (There assemblies are connected with the jumper wires.)

# 5. DIAGNOSIS

## 5.1 POWER ON SEQUENCE

## 5.2 TROUBLESHOOTING

In this section, causes of failure, diagnostics points, and corrective measures can be searched for according to symptoms. Before disassembling this unit, it is recommended to infer a failure point by referring to the error code.

For the relationship of each power-supply and signal system, see “4.3 POWER SUPPLY BLOCK DIAGRAM.”

If software of the product is updated before performing diagnostics, check that software updating has been performed properly before proceeding to diagnostics.

If software updating has not been performed properly, update the software, following the instructions in “8.3 UPDATING OF THE FIRMWARE.”

- [10] Basic Operation Check of CPU/DSP

The waveform numbers described in this section correspond to the “10.14 WAVEFORMS.”

### [0] Prior Confirmation

#### [0-1] Checking in Service Mode

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	—	Service mode	Check the failure points.	See the section describing locations of defects in this manual.	6. SERVICE MODE

#### [0-2] Checking Cables

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Disconnection, breakage, or loose connection of cables	Cables	Check that all the cables are securely connected. Check that there is no breakage in the cables.	Securely connect the cables. If a cable is broken, replace it.	4.1 OVERALL CONNECTION DIAGRAM

### [1] Failure in Startup

#### [1-1] No power

Plug the AC power cord in and even if turn the power on, the product does not startup.					
No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Standby power failure	CMPX Assy DFLB Assy POWER SUPPLY Assy	Check the voltages of V+12_EUP and V+3R3_EUP.	If the V+12_EUP voltage is not output, the POWER SUPPLY Assy may be defective. If the V+12_EUP voltage is output, the DFLB Assy may be defective.	4.3 POWER SUPPLY BLOCK DIAGRAM 10.13 VOLTAGES <span style="border: 1px solid red; padding: 2px;">① ⑯</span>
2	Path failure of the power switch	DFLB Assy SLD1 Assy PSWB Assy	Check if there is loose connection on the signal line from the Power switch (S1601) to PANEL CPU (IC1007).	If the connection up to the Power switch is properly made and if the PWR_SW signal is not set to "L" when the Power switch is pressed, the Power switch may be defective.	10.15 EACH SIGNAL LEVEL <span style="color: red;">②</span>
3	Path failure of the power on	DFLB Assy CMPX Assy	Check the level of PWR_ON (IC1007-pin 45) and PWR_XON (CN2001-pin 3) signals.	If the PWR_ON is "L", PANEL CPU(IC1007) may be defective. If the PWR_XON is "H", poor connection or Q2021 may be defective.	10.15 EACH SIGNAL LEVEL <span style="color: red;">③ ④</span>
4	Power failure	CMPX Assy POWER SUPPLY Assy	Check the V+12 voltage of CN2001-pins 4 and 5.	If the voltage is not output, POWER SUPPLY Assy may be defective.	10.13 VOLTAGES <span style="color: red;">⑤</span>

#### A [1-2] Mode shift error in Standby mode

Shifting to the STANDBY mode cannot be performed even if turn the power off.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Path failure of the power switch	DFLB Assy SLD1 Assy PSWB Assy	Check if there is loose connection on the signal line from the Power switch (S1601) to PANEL CPU (IC1007).	If the connection up to the Power switch is properly made and if the PWR_SW signal is not set to "H" when the Power switch is turned off, the Power switch may be defective.	10.15 EACH SIGNAL LEVEL <span style="color:red">(A)</span>
2	Path failure of the power on	DFLB Assy CMPX Assy	Check the level of PWR_ON (IC1007-pin 45) and PWR_XON (CN2001-pin 3) signals.	If the PWR_ON is "H", PANEL CPU(IC1007) may be defective. If the PWR_XON is "L", poor connection or Q2021 may be defective.	10.15 EACH SIGNAL LEVEL <span style="color:red">(B) (J)</span>

#### B [1-3] "E-8709" is displayed on the DATA FL display after startup.

Communication between the Main CPU and Panel CPU has not been established.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Communication failure between the microcomputer	DFLB Assy MAIN Assy	Check the TSCK, TSI, PNL_BUSY, TSO and MAIN_BUSY waveforms.	If no signal is output, the possible causes are poor connection, failure in the PANEL CPU (IC1007) or MAIN CPU (IC103), and startup failure of the MAIN CPU caused by defective FLASH ROM (IC101) or SDRAM (IC102).	10.14 WAVEFORMS <span style="color:red">(8) (9) (7) (10) (4)</span>
2	Power failure	MAIN Assy	Check the V+3R3 and V+1R2 power voltages.	If power is not output, a part of the power supply section may be defective.	10.13 VOLTAGES <span style="color:red">(9) (10)</span>

#### C [1-4] The Standby LED flashes in red.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	A voltage error was generated.	—	Check the level of the VDET signal.	If the signal level is "L", a voltage error was generated.	5.5 ABOUT POWER SUPPLY MONITORING 10.13 VOLTAGES

## 2] Display (DATA FL/JOG FL/LED)

#### D [2-1] The DATA FL does not light.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Power failure	DFLB Assy	Check the power-supply voltages (V+6R6,F $\pm$ , V+38, V+3R3_SW) of the FL.	If the presence of power is not confirmed, check the mounting statuses of the regulator IC and its peripheral parts for each power supply. If they are properly mounted, then the parts may be defective.	4.3 POWER SUPPLY BLOCK DIAGRAM 10.13 VOLTAGES <span style="color:red">(20) (21) (23) (19)</span>
2	Signal errors	DFLB Assy	Check the waveforms and connection of communication line of FL in the DFLB Assy. • D_SCLK • D_SO • D_LAT • D_BK	If no signal is output, the PANEL CPU (IC1007) may be defective. If output signal is no problem, DATA FL (V1001) may be defective.	10.14 WAVEFORMS <span style="color:red">(1) (4) (3) (2)</span>

#### E [2-2] The JOG FL does not light.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Power failure	JFLB Assy	Check the power-supply voltages (VFDP2R7_F1, VFDP2R7_F2, V+27, V+3R3_SW) of the FL.	If the presence of power is not confirmed, check the mounting statuses of the regulator IC and its peripheral parts for each power supply. If they are properly mounted, then the parts may be defective.	4.3 POWER SUPPLY BLOCK DIAGRAM 10.13 VOLTAGES <span style="color:red">(24) (25) (22) (19)</span>
2	Signal errors	JFLB Assy	Check the waveforms and connection of communication line of FL in the JFLB Assy. • J_SCLK • J_SO • J_LAT • J_BK	If no signal is output, the PANEL CPU (IC1007) may be defective. If output signal is no problem, JOG FL (V1801) may be defective.	10.14 WAVEFORMS <span style="color:red">(1) (4) (3) (2)</span>

### [2-3] The LED does not light.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Signal errors	DFLB Assy	Check that the control signal for the LED is output from the PANEL CPU (IC1007).	If no signal is output, check a mounting state of PANEL CPU(IC1007). If the mounting is OK, the IC1007 may be defective.	[10] Basic operation check of CPU/DSP
2	Defective parts	DFLB Assy	Check that the voltage (2.2 V) is present at both ends of the LED.	If the voltage is abnormal, the LED, transistor or peripheral resistors may be defective.	—

## [3] Operations (Keys/variable controls/JOG)

As operations of all keys, variable controls, and JOG dial can be checked in Service mode.

### [3-1] No key functions

PLAY, CUE, AUTO BEAT LOOP 1-4, BEAT SELECT, REV, LOOP IN/OUT, RELOOP, or USB STOP key does not function.					
No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connection /Defective SW	Related point	Check if there is loose connection on the signal line from the PANEL CPU (IC1007) up to the SW.	If there is no loose connection and if the signal does not become "L" when the SW is pressed, that SW is defective.	10.15 EACH SIGNAL LEVEL
2	Defective PANEL CPU (IC1007)	DFLB Assy	If the symptom persists after the above corrections,	Check a mounting state of PANEL CPU (IC1007). If the mounting is OK, the IC1007 may be defective.	[10] Basic operation check of CPU/DSP
The signals from other keys are analog and connected to multiple switches.					
No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connection /Defective SW	Related point	Check if there is loose connection on the signal line from the PANEL CPU (IC1007) up to the SW.	If the SWs connected to the signal line function properly and if the connections are properly made, the SWs may be defective.	—
2	Defective PANEL CPU (IC1007)	DFLB Assy	If the symptom persists after the above corrections,	Check a mounting state of PANEL CPU (IC1007). If the mounting is OK, the IC1007 may be defective.	[10] Basic operation check of CPU/DSP

### [3-2] Rotary selector not controllable

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Defective rotary selector	DFLB Assy	Check if the signals from the RENC_1, RENC_2, and RENC_SW signal lines are normal when the rotary selector is turned or pressed.	If the signals are not normal, check the connections of the signal lines. If the connections are properly made, the Rotary selector (S1018) may be defective. Replace it.	10.15 EACH SIGNAL LEVEL
2	Defective PANEL CPU (IC1007)	DFLB Assy	If the symptom persists after the above corrections,	Check a mounting state of PANEL CPU (IC1007). If the mounting is OK, the IC1007 may be defective.	[10] Basic operation check of CPU/DSP

### [3-3] Variable controls not controllable

Tempo slider not controllable					
No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connection	DFLB Assy SLD1 Assy SLD2 Assy	Check if there is loose connection on the signal line from the PANEL CPU (IC1007) to the tempo slider (VR1501).	If the connections of signal line are improper, resolder it.	—
2	Defective tempo slider	DFLB Assy SLD2 Assy	Check the ADCT and ADIN signals level.	If the voltage of the ADCT signal (IC1007-pin 1) is not 1.65 V, or the voltage of the ADIN signal (IC1007-pin 2) does not change between 3.3 V and 0 V, the Tempo slider (VR1501) may be defective.	10.15 EACH SIGNAL LEVEL (C) (D)
3	Defective PANEL CPU (IC1007)	DFLB Assy	If the symptom persists after the above corrections,	Check a mounting state of PANEL CPU (IC1007). If the mounting is OK, the IC1007 may be defective.	[10] Basic operation check of CPU/DSP

### VINYL SPEED ADJUST not controllable

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connection	DFLB Assy SLD1 Assy	Check if there is loose connection on the signal line from the PANEL CPU (IC1007) to the VINYL SPEED ADJUST VR (VR1301).	If the connections of signal line are improper, resolder it.	—
2	Defective variable controls	DFLB Assy SLD1 Assy	Check the TCH/REL signal level.	If the voltage of the TCH/REL signal line (IC1007-pin 88) does not change between 3.3 V and 0 V, the VINYL SPEED ADJUST VR (VR1301) may be defective.	10.15 EACH SIGNAL LEVEL (E)
3	Defective PANEL CPU (IC1007)	DFLB Assy	If the symptom persists after the above corrections,	Check a mounting state of PANEL CPU (IC1007). If the mounting is OK, the IC1007 may be defective.	[10] Basic operation check of CPU/DSP

A

### [3-4] Abnormalities regarding the JOG dial

After the JOG Assy is disassembled then reassembled, be sure to check that the load value for the JOG dial is within the specified range. (Refer to the "8.4 JOG DIAL ROTATION LOAD ADJUSTMENT".)

Turning of the JOG dial is not detected					
No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Defective part of photo interrupter	DFLB Assy JFLB Assy JOGB Assy	Check the waveforms of signal lines. JOG1_C (IC1007-pin 26) JOG2_C (IC1007-pin 25)	If no waveform can be confirmed, the photo interrupter (PC1901) may be defective.	10.14 WAVEFORMS <span style="color:red">(5)(6)</span>
2	Defective PANEL CPU (IC1007)	DFLB Assy	If the symptom persists after the above corrections,	Check a mounting state of PANEL CPU (IC1007). If the mounting is OK, the IC1007 may be defective.	[10] Basic operation check of CPU/DSP

B Pressing on the JOG dial cannot be detected.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Defective part	DFLB Assy JFLB Assy	Check the level of JOG_SW signal (IC1007-pin 27) when the JOG dial is pressed.	If the JOG_SW signal (IC1007-pin 27) is not set to "L" when the JOG dial is pressed and it is not set to "H" when the JOG dial is not pressed, the SHEET SW(DSX1078) may be defective.	10.15 EACH SIGNAL LEVEL <span style="color:red">(F)</span>
2	Defective PANEL CPU (IC1007)	DFLB Assy	If the symptom persists after the above corrections,	Check a mounting state of PANEL CPU (IC1007). If the mounting is OK, the IC1007 may be defective.	—

Noise is heard when the JOG dial is turned.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Defective attachment of the JOG FL. Defective gear or JOG DIAL B.	JFLB Assy JOGB Assy	Check if the JOG FL of the JFLB Assy has been shifted upward from the holder. Also check the JOGB Assy is attached normally.	The JOG FL may interfere with JOG A.	—
			There may be any scratches on the 3 gears or some foreign object between the gears.	If there are any scratches, replace the scratched gear with a new one. If there is any foreign object, remove it then replace the gears with new ones. Gears to be replaced: Load gear, Gear A, Gear B	—

The JOG dial turns too freely. (The load value for the JOG dial is outside the specified range.)

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Improper adjustment or assembly of the JOG dial	JOG Assy	Check that the load value for the JOG dial is within the specified range, referring to "Measuring method" in "8.4 JOG Dial Rotation Load Adjustment."	If it is outside the specified range, adjust the position of the Adjust Plate to change the load value for the JOG dial, referring to "Load adjustment method" in "8.4 JOG Dial Rotation Load Adjustment."	8.4 JOG Dial Rotation Load Adjustment.
				During the above adjustment, if the upper-limit adjustment position of the Adjust Plate is reached, oil may have been spattered on the Cam Plate. Replace the washer, load gear, and cam plate with new ones, then reassemble.	8.4 JOG Dial Rotation Load Adjustment.

Resistance to turning the JOG dial is too strong. (The load value for the JOG dial is outside the specified range.)

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Improper adjustment of the JOG dial or defective washer, gear, or cam plate	JOG Assy	Check that the load value for the JOG dial is within the specified range, referring to "Measuring method" in "8.4 JOG Dial Rotation Load Adjustment."	If it is outside the specified range, adjust the position of the Adjust Plate to change the load value for the JOG dial, referring to "Load adjustment method" in "8.4 JOG Dial Rotation Load Adjustment."	8.4 JOG Dial Rotation Load Adjustment.
				During the above adjustment, if the lower-limit adjustment position of the Adjust Plate is reached, shavings from the worn-out washer may have increased the friction. Replace the washer, load gear, and cam plate with new ones, then reassemble.	8.4 JOG Dial Rotation Load Adjustment.

F

## [4] USB (USB-Type A), PC (USB-Type B)

### [4-1] USB (USB-Type A)

Check the following, with a USB device connected to the USB-Type A connector.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connections	USBA Assy CMPX Assy MAIN Assy	Check the connections of the USBA_D_P/N communication line, USB_VBUSON and USB_CODETFLG signal lines.	If connection is improper, resolder it.	—
2	USB VBUS is defective.	USBA Assy CMPX Assy	Check the voltage level of V+5_USB (JA2201-pin 1 and IC2002-pin 3) of USB power supply.	If the voltage of IC2002-pin 3 is abnormal, IC2002 may be defective. If the voltage of JA2201-pin 1 is abnormal, go to [3].	10.13 VOLTAGES [7]
3	Defective part	CMPX Assy	Check the signal level of USB_CODETFLG (IC2003-pin 5) and USB_VBUSON(IC504-pin 4).	<ul style="list-style-type: none"> <li>If the USB_VBUSON(IC504-pin 4) is not "H", MAIN CPU(IC103) may be defective.</li> <li>If the USB_VBUSON(IC504-pin 4) and USB_CODETFLG(IC2003-pin 5) are "H", IC2003 may be defective.</li> <li>If the USB_VBUSON(IC504-pin 4) is "H" and USB_CODETFLG(IC2003-pin 5) is "L", USB power supply may be short-circuited in the ground or IC2003 may be defective.</li> </ul>	10.15 EACH SIGNAL LEVEL [L][K]

### [4-2] PC (USB-Type B) does not work

Check the following, with a USB device connected to the USB-Type B connector.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connections	—	Check the connections of the USBB_D_P/N communication line and VBUS_B signal line.	If connection is improper, resolder it.	10.15 EACH SIGNAL LEVEL
2	Defective part	—	If the symptom persists after the above corrections,	The MAIN CPU (IC103) may be defective.	[10] Basic operation check of CPU/DSP

## [5] AUDIO OUT

The analog audio signal is not output.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connections	MAIN Assy CMPX Assy	Check the connection of the audio signal lines (ROUT/LOUT).	If connection is improper, resolder it.	—
2	MUTE signal error	MAIN Assy DFLB Assy CMPX Assy	Check the AMUTE signal. "L" (release mute) at normal playback. Check the MAIN_XMUTE signal. "H" (release mute) at normal playback.	If the signal is abnormal, loose connection and mute circuit may be defective.	10.15 EACH SIGNAL LEVEL [H][I]
3	Power failure	MAIN Assy	Check the voltages for audio (V+10_A, V-AUDIO(V-10_A), V+5_A, V+3R3_A, V+1R25). Check also if the protector (P2003) is broken.	<ul style="list-style-type: none"> <li>If the V+10_A voltage level is abnormal, Q2028 and its peripheral parts may be defective.</li> <li>If the V-AUDIO(V-10_A) voltage level is abnormal, Q2031 and its peripheral parts may be defective.</li> <li>If the V-5_A voltage level is abnormal, IC406 and its peripheral parts may be defective.</li> <li>If the V+3R3_A voltage level is abnormal, IC402 and its peripheral parts may be defective.</li> <li>If the V+1R25 voltage level is abnormal, IC403 and its peripheral parts may be defective.</li> </ul>	10.13 VOLTAGES [5][6][16][11][12]
4	Signal error Defective part	MAIN Assy	Check the AUDIO DSP (IC301) and AUDIO DAC (IC302).	AUDIO DSP (IC301), AUDIO DAC (IC302) and its peripheral parts may be defective.	[10] Basic operation check of CPU/DSP

## [6] CONTROL

Improper fader operation after fader start.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connections	MAIN Assy CMPX Assy	Check the connection of the control signal lines (CONT1/CONT2).	If connection is improper, resolder it.	—
2	Signal error Defective part	MAIN Assy	Check the waveform of the control signal lines (CONT1/CONT2).	If the input signal cannot be recognized at input pin of MAIN CPU (IC101), the signal line or the peripheral devices may be defective. If the input signal can be recognized, the MAIN CPU (IC103) may be defective.	10.14 WAVEFORMS

## A [7] DRIVE ASSY

### [7-1] Improper operation of the loading mechanism

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connections	Cables MAIN Assy JINT Assy SLMB Assy	Check the connection of the motor-drive signal line LO±. Check that the wires between the loading motor (DC motor) and the SLMB Assy are securely soldered. Check also the wires are not broken.	If soldering is improper, resolder it. If the wires are broken, replace them.	—
2	Signal errors	MAIN Assy JINT Assy SLMB Assy	Check the connections and waveforms of the LPS1 and LPS2 signal lines. In the normal state, the LPS1 and LPS2 signals becomes "L" when the loading detection SWs(S1701 and S1702) are set to ON.	If the signal waveform is not proper, loose connection and the loading detection SWs(S1701 and S1702) may be improperly soldered or defective.	10.14 WAVEFORMS <span style="color:red">(11)(12)</span>
3	Power failure	MAIN Assy	Check the power voltages. V+7R6_M, V+5R6_M, VREF1R65, V+3R3_B, V+3R3, V+1R2A	For any power-supply section that does not output the voltage, check the mounting statuses of the regulator IC and its peripheral parts.	4.3 POWER SUPPLY BLOCK DIAGRAM

No loading (There is an abnormal noise.)

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Improper assembling	Slotin Mecha Assy SLMB Assy	Check if the SW lever has shifted on the loading detection SWs (S1701 and S1702) on the SLMB Assy.	If assembling is improper, resolder it.	—
2	Loose connections Signal errors	MAIN Assy JINT Assy SLMB Assy	Check the waveforms on the LPS1 and LPS2 signal lines.	If the signal waveform is not proper, loose connection and the loading detection SWs (S1701 and S1702) may be improperly soldered or defective.	10.14 WAVEFORMS <span style="color:red">(11)(12)</span>

### [7-2] The stepper does not work.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Loose connections	MAIN Assy JINT Assy	Check the connection of the stepping-motor drive signal line ST1± and ST2±.	If connection is improper, resolder it.	—
2	Signal errors	MAIN Assy	Check the waveform of INSW (INSIDE) signal. In the normal state,The INSIDE SW of TM Assy-S (Traverse mecha) becomes "L" when the INSIDE SW is set to ON.	If the signal is not proper, check the connections. If connections are properly made, replace the TM Assy-S (traverse mecha).	10.15 EACH SIGNAL LEVEL <span style="color:red">⑥</span>
3	Power failure	MAIN Assy	Check the power voltages. V+7R6_M, V+5R6_M, VREF1R65, V+3R3_B, V+3R3, V+1R2A	For any power-supply section that does not output the voltage, check the mounting statuses of the regulator IC and its peripheral parts. Replace it.	4.3 POWER SUPPLY BLOCK DIAGRAM

### [7-3] No CD playback

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Short switch	CNCT Assy	Short switch S2501 is in the off (open) state.	In the normal operation, turn the short switch to off (open).	—
2	Any foreign matter attached	TM Assy-S (Traverse mecha)	Check if any foreign matter, such as shavings, dirt, or dust, is attached to the lens of the Pickup Assy.	Clean a lens.	—
3	Defective pickup	MAIN Assy	Check the LD current value. Measure the actuator resistance value.	Refer to the "5.3 Diagnosis of the Pickup Assy."	5.3 Diagnosis of the Pickup Assy
4	—	Service mode	If the symptom persists after the above corrections, check operations of the CD drive in Service mode.	Check operations of the CD drive, referring to the procedures described in "6. SERVICE MODE." If the CD drive functions improperly, see "[8] SERVICE MODE" in this section.	6. Service mode

## [8] SERVICE MODE

### [8-1] The measured error rate is outside the specified range in Player Operation mode.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Scratches or dirt on the disc	DISC	Check if the recording surface of the disc is dirty.	If it is clearly dirty, replace it with a disc of good condition.	—
2	Scratches or dirt on the disc	DISC	Measure the error rate, using the same disc that produced the bad error rate but using the addresses in a different area.	If the error rate measured in a different area is OK, the disc is defective. Replace the disc with one in good condition. If no error rate measured in various areas throughout the entire surface of the CD is OK, go to [3].	—
3	Any foreign matter attached	TM Assy-S (Traverse mecha)	Check if any foreign matter, such as shavings, dirt, or dust, is attached to the lens of the Pickup Assy.	Clean the lens.	—
4	Improper assembly	TM Assy-S (Traverse mecha)	Check that the TM Assy-S (traverse mecha) has been securely installed.	If it has not, reinstall it properly.	—
5	Improper assembly	Slotin Mecha	Check that the loading mechanism Assy has been securely installed.	If it has not, reinstall it properly.	—
6	Any foreign matter attached	TM Assy-S (Traverse mecha)	Check for any foreign matter on the spindle table.	Remove any foreign matter.	—
7	Any foreign matter attached	Slotin Mecha	Check if any foreign matter is attached to the magnet portion of the clamer.	Remove any foreign matter.	—
8	Signal errors	MAIN Assy	Check that the waveforms of the RFO and AGCRF signals form clear eye patterns.	If their waveforms are not of the same quality, check the mounting status of the Servo IC (IC201). If it is correctly mounted, then it may be defective. Replace it.	10.14 WAVEFORMS <span style="color:red">(13)(14)</span>
9	Defective pickup	TM Assy-S (Traverse mecha)	If the symptom persists after the above corrections,	See "5.3 Diagnosis of the Pickup Assy" for details.	5.3 Diagnosis of the Pickup Assy

### [8-2] The drive does not work during Test Operation mode.

The LD does not emit light.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Defective pickup	—	Check the LD current and measure the resistance value of the actuator.	See "5.3 Diagnosis of the Pickup Assy" for details.	5.3 Diagnosis of the Pickup Assy

The spindle motor does not rotate.

No.	Cause	Diagnostics Point	Item to be Checked	Corrective Action	Reference
1	Signal errors	MAIN Assy	Check that the DRVMUTE1 and 2 signal becomes H after loading is completed.	If the signal is not normal, check the mounting statuses of the DRIVER IC (IC204) and MAIN CPU (IC103) terminals. If they are properly mounted, then the IC103 may be defective.	10.15 EACH SIGNAL LEVEL <span style="color:red">(S)</span>
2	Signal errors	MAIN Assy	Check a SPIN signal. In the normal, 1.65 V at the center. The voltage in the start-up acceleration is around 3 V.	If the signal is not normal, check the mounting statuses of the DRIVER IC (IC204) and Servo CPU (IC201) terminals. If they are properly mounted, then the IC204 and IC201 may be defective.	10.15 EACH SIGNAL LEVEL <span style="color:red">(T)</span>
3	Power failure	MAIN Assy	Check the power voltages. (V+7R6_M, V+5R6_M, VREF1R65, V+3R3_S)	Check the mounting statuses of the regulator IC of the power-supply section that produces that voltage and its peripheral parts. If they are properly mounted, then the parts may be defective. VREF1R65 is produced at the Servo IC (IC201). If this voltage is not output, check the mounting status of the IC201. If it is properly mounted, then the part may be defective.	4.3 POWER SUPPLY BLOCK DIAGRAM
4	Defective parts	—	If the symptom persists after the above corrections,	DRIVER IC(IC204) may be defective.	—

In-focus not possible

## 5.4 CONNECTION CHECK WITH THE PC

### [1. USB B connector]

Whether communication between the PC connected via the USB B connector and this unit is properly performed or not can be confirmed on the PC.

**Note:** Installation of the driver software is not necessary.

#### ■ Connect to PC

When you check the connection, connect this unit to the PC and confirm that "CONNECTED" is displayed on the display.

##### ● How to Enter

Press the [PC] button.

When you press the PC button during DISC or USB use, caution is displayed.

Press the PC button according to caution again, or press the Rotary selector.

A

#### ■ Use Device Manager for checking.

If the PC and this unit are properly connected, the components of this unit are added in Device Manager (under Hardware) as devices.

If all components are properly displayed, the PC and this unit are properly communicating via the USB connector.

B

In a case of Windows XP:

Start, Control Panel, System, Hardware, then Device Manager

Devices to be added:

Universal Serial Bus controllers

USB Composite Device

Under "Sound, video and game controllers"

USB Audio Device

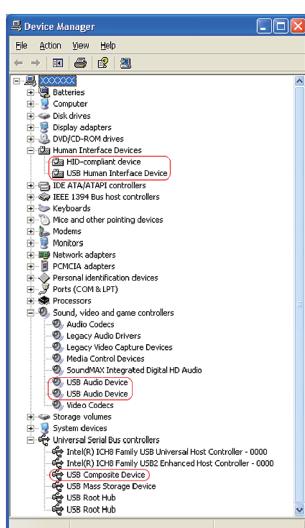

Human Interface Devices

HID-compliant device

USB Human Interface Device

C

A communication check may be easily performed if connection is made with Device Manager displayed on the PC screen.

D

E

F

## 5.5 ABOUT POWER SUPPLY MONITORING

The Panel CPU of this unit always monitors for power failure of the unit while power is on and will shut the unit off immediately after an error is detected and notify of the error by LED indications.

• Content to be monitored

Any power failure generated inside an Assy or Power Supply Assy, such as voltage drop and voltage rise

Power to be monitored: V+7R6\_M, V+12, V+5R6, V+1R2, V+1R25, V+3R3\_S, V-10\_A, V+3R3\_SW, V+6R6\_FL, V+38

• Microcomputer Detection terminal and its terminal voltage

44-pin VDET terminal of IC1007 (PANEL CPU)

Normal: 3.3 V

During power failure: 0 V

• Timing of monitoring start

0.1 sec after the unit is turned ON

• Timing upon judgment as a failure

0.5 sec after an error is detected

• LED indication when an error is generated

If an error is generated, the STANDBY LED will flash after the unit shuts itself off.

• Restoration method

After the unit shuts itself off because of an error, after completing diagnosis, unplug the AC power cord and wait about 1 minute before turning the unit back on.

Error-detection status is retained for about 1 minute after the AC power cord is unplugged, during which time signals from the POWER switch are not accepted and the unit cannot be turned on.

### Diagnostic procedure

① Unplug the AC power cord.

② Remove R1123 from the DFLB Assy.

**Note:** This step will disable power supply monitoring.

③ Plug in the AC power cord.

④ As the unit is turned on in a normal way, check each voltage in this state.

**Note:** Because power will be forcibly supplied even if any voltage is abnormal, if abnormal voltage continues, the defective point may produce heat, which may be dangerous. Therefore, during diagnosis, be sure to unplug the AC power cord several seconds after it is plugged in so that forcible powering will not continue.

⑤ If the voltage of any power IC is abnormal, the circuit that uses that power or the power IC itself may be defective.

⑥ Repair the defective part.

⑦ Return R1123 to its original position on the DFLB Assy.

**Note:** This step will enable power supply monitoring.

## 5.6 ABOUT THE PROTECTORS

E

This unit is provided with protectors (elements for protection against excess current) on the power lines to protect the unit's parts and circuits from excess current and excess voltage. If any abnormal power short-circuiting is generated, a protector will be activated to protect parts and circuits.

• Locations and functions of protectors

P2003 DEK1095-: Protection against excess current on the V+12\_A and V+10\_A lines

P2004 DEK1095-: Protection against excess current for V+12\_EUP and against excess voltage for its subsequent circuits

### Diagnostic procedure

① Unplug the AC power cord.

② Check for any error, such as short-circuiting or defective parts, in the circuits subsequent to the protector.

③ Repair the defective part.

④ Replace the protector.

## 6. SERVICE MODE

### 6.1 SERVICE MODE

The following service modes are prepared for this unit.

- ① Confirmation of the button input and an indication function.

It is the mode which checks each input and display function of a button, a JOG dial, the slider volume, and a encoder.

- ② Check mode of the load of JOG dial.

It is the mode which measures the load when rotating JOG dial.

- ③ Indication of various information

It is a mode displaying information such as a version and an error history, a device normal / abnormality judgment.

- ④ Error display list

An error code and the contents are shown.

- ⑤ Confirmation of movement of the drive unit

It is the mode which checks operation of a mechanism and servo of drive unit.

- ⑥ Updating firmware

Mode for firmware updating. Two modes (one for updating using a USB memory device and one for updating using a CD-ROM) are provided.

Refer to the "8.3 UPDATING OF THE FIRMWARE".

### 6.2 ABOUT THE DEVICE OF CDJ-850

Device Name	Function	Part No.	Ref No.	Assy
MAIN CPU	System control	R5S72630P200FP	IC103	MAIN Assy
FLASH	Memory for MAIN CPU (Firmware)	DYW1796	IC101	MAIN Assy
SDRAM	Memory for MAIN CPU (Work)	K4S561632J-UC75	IC102	MAIN Assy
AUDIO DSP	Audio DSP	DSPC56371AF180	IC301	MAIN Assy
SERVO DSP	Servo DSP	TC94A15FG	IC201	MAIN Assy
SERVO DRIVER	Disc drive control	BD7956FS	IC204	MAIN Assy
PANEL CPU	Button input, LED & FL control	PEG799A8	IC1007	DFLB Assy

## 6.3 DETAILS ON SERVICE MODE

### A [1] Confirmation of the button input and an indication function

When it spends a power supply while pushing a TEMPO button and a BACK button simultaneously, It is displayed in the BROWSE\_FL, "SERVICE MODE", and enters into this mode.

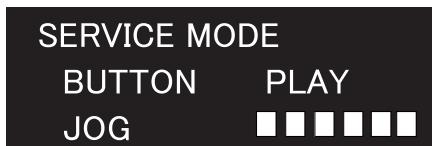

When it enters this mode, the TAG-TRACK button is pushed, and the screen is sent as follows, the following status displays are done.

In this mode, the input of each button, JOG, volume, etc. is normal, and it can check that a display can also be performed normally. In addition, indication turns on while I push a button.

**Caution:** In this status display, if a VINYL SPEED ADJUST VOLUME is turned to the limit of the right, it will shift to "the load measurement mode of JOG." (Refer to the following clause.)

B

At the JOG rotation

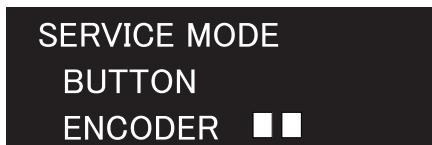

BUTTON : The pushed button name is displayed.  
 JOG (\*) : The point moves according to the direction that JOG turned.  
 ENCODER (\*) : The point moves according to the direction that ENCODER switch turned.  
 JOG VOLUME (\*) : If a VINYL SPEED ADJUST VOLUME is turned to the right, a bar display will increase.  
 TEMPO SLIDER VOLUME : If a TEMPO slider knob is moved to the - side, a bar display will increase.

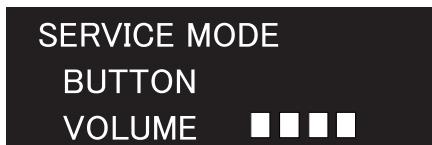

\*: JOG, ENCODER, VOLUME  
 Display the data for the touched controls in the third line.

C

F

### [3] Display of various information

#### How to Enter Service Modes

##### 1) Version/error history

The Version Display mode is entered after the RELOOP key is held pressed for at least 10 sec.

To change screens between Version Display and Error History, press the VINYL MODE key while the Version Display screen is displayed.

The error log screens will be changed if you press the CALL (LEFT) or CALL (RIGHT) key while the error history is displayed.

##### 2) Panel diagnosis/JOG load measurement (Panel microcomputer function)

To enter this mode, set the POWER switch to ON while holding the BACK and TEMPO keys pressed.

To enter JOG Load Measurement mode, set the TOUCH/RELEASE volume to the + (MAX) position during Service mode.

##### 3) CD drive diagnosis mode

To enter CD Drive Diagnosis mode, set the POWER switch to ON while pressing the TIME and CD SELECT keys pressed. Set the POWER switch to OFF to quit this mode.

##### 4) Firmware Updating (USB media/program area)

To enter this mode, set the POWER switch to ON while pressing the USB SELECT and RELOOP keys pressed.

After updating is completed, set the POWER switch to OFF to quit this mode.

##### 5) Firmware Updating (CDROM media/program area)

To enter this mode, set the POWER switch to ON while pressing the CD SELECT and RELOOP keys pressed.

After updating is completed, set the POWER switch to OFF to quit this mode.

##### 6) Factory reset

To enter this mode, set the POWER switch to ON while holding the BACK and USB SELECT keys pressed.

For details on items to be factory-reset, see "8.2 USER SETTABLE ITEMS."

### [4] The list of error display

Time display shows "E-XXXX".

Main	Sub	Error Type	Medium	Error Content
E-6002	—	DSP PROGRAM	—	The program cannot be written in the DSP.
E-7024	—	Updating error	—	Updating failed.
E-7201	26	TOC READ ERROR	CD	TOC data cannot be read.
E-8301	22	PLAYER ERROR	CD	Focus servo cannot be closed.
	91		CD	The pickup cannot be returned to the inner track of the disc.
E-8302	12	PLAYER ERROR (Playback error)	CD	The desired address could not be searched for.
	15		CD	The address could not be read.
E-8303	99	Buffer write error	CD	Writing of music data in the buffer failed.
E-8304	—	Decoding error	CD	Although compressed music data files (MP3/AAC) are supported by this unit, a data or decoding (decompression) error was generated.
E-8305	—	Format error	CD	Although the filename extension of the music file (MP3/AAC/WAV/AIFF) is proper, the format of descriptions in the file is not supported.
E-8306	—	No music file	USB	Although the piece of music had once been registered in the library (database) or a playlist, etc., that piece had been erased from the USB storage device as of time of playback.
E-8307	—	USB writing error	USB	Writing to the USB storage device failed.
E-8709	—	COMMUNICATION ERROR	—	Communication between the panel CPU and the main CPU failed.
E-9101	90	LOADING TIMEOUT	CD	A mechanical error (timeout) was generated during loading/unloading of a disc.

## A [5] Confirmation of movement of the drive unit

This mode consists of "player operation mode" and "test operation mode."

### <Player operation mode>

Basic operation of Servo, such as setup, play, pause, and track search, is carried out. Moreover, measurement of an error rate can also be performed.

### <Test operation mode>

Servo operation is finely controllable gradually.

B \* It becomes player operation mode and shifts to test operation mode by the key input in the beginning.

\* The command treated here is for mainly testing a mechanism and a servo system, and is not for DJ functions, such as scan and tempo.

Function	Main unit button
<Player operation mode> Servo All Off (Stop) Play(Trace) / Pause Track Search Fwd/Rev Error Rate Count Eject Mode Change (-> Test operation mode)	TIME PLAY/PAUSE TRACK SEARCH FWD/REV CUE EJECT MASTER TEMPO
<Test operation mode> Servo All Off (Stop) LD On/Off TEMPO Focus On/Off RELOOP Spindle Kick, Tracking On Tracking Off Slide FWD Slide REV Pickup Up/Down Mode Change (->Player operation mode)	TIME TEMPO RELOOP IN/CUE (HOT LOOP) OUT (OUT ADJUST) SEARCH FWD SEARCH REV UTILITY MASTER TEMPO

## D ■ Player operation mode command

### Play(Trace) / Pause

If it is in a stop state, it will set up and play. Moreover, if it is in a play state, whenever it will push a button, a pause and a play are carried out by turns.

Display a playing address in FL at present.

**Note:** In this mode, even if it inserts a disc, an automatic setup is not carried out.

Moreover, a play is not carrying out audio reproduction, but is tracing the signal side of a disc.

Trace a disc by a turn of four times speed in the play. The sound is not output.

### Track Search F/R

Search a track displayed by a FWD / REV direction and do pause.

### E Error Rate Count

I measure an error rate from a present position doing a play/pause for about 10 seconds and display a measurement result in FL. Usually, a track to measure is made to search and this button is inputted from a pause state.

For example, it is displayed as "3.56E-4 O.K." etc.

If an error rate is less than 3.00E-3, it will be displayed as OK. If an error rate is larger than 3.00E-3, it will be displayed as NG.

Measurement with the managed disc at the time of factory shipments is a premise.

The product does not judge whether they are inferior goods at the time of service.

### Eject

A disc is ejected.

### F Mode Change

If the MASTER TEMPO button is pushed into player operation mode, MASTER TEMPO LED will light up, and it will shift to the below-mentioned "test operation mode."

## ■ Test operation mode command

Servo operation is finely controllable gradually.

Keep in mind a test operation mode command that it may give a damage to a player as mistaking the usage.

### Servo All Off

When servo is ON, all servo will be turned off if the TIME button is pushed.

"ALL OFF" will be displayed.

### LD On/Off

The LD can be turned on or off by pressing the TEMPO key. "LD ON" or "LD OFF" will be displayed.

### Focus On

If the RELOOP key is pressed in Stop mode, the LD is turned ON and auto focusing will be performed.

"FCS ON" will be displayed.

### Spindle Kick, Tracking On/Off

If the IN/REALTIME CUE (LOOP IN) key is pressed while the tracking servo is OFF, spindle kick then automatic adjustment will be performed, after which the tracking servo will be turned ON.

If the key is pressed while the tracking servo is ON, it will be turned OFF. "TRK ON" or "TRK OFF" will be displayed.

### Tracking Off

If the OUT (LOOP OUT) key is pressed while the tracking servo is ON, it will be turned OFF.

"TRK ON" will be displayed.

### Slide FWD

If the SEARCH (FWD) key is pressed while the tracking servo is ON, it will be turned OFF and the slider will be shifted by about 2 mm in the FWD direction. "SLD FWD" will be displayed.

### Slide REV

If the SEARCH (REV) key is pressed while the tracking servo is ON, it will be turned OFF and the slider will be shifted by about 2 mm in the REV direction. "SLD REV" will be displayed.

### Pickup Up/Down

If the DISPLAY/UTILITY key is pressed during Stop mode, the LD will be turned ON then the pickup will be moved up and down. Focusing will not be closed. "PU UP/DN" will be displayed.

### Mode Change

If the MASTER TEMPO key is pressed in Test Operation mode, the MASTER TEMPO LED will go dark then above-mentioned Player Operation mode will be entered.

\*To start up the unit in Test mode in steps, input the commands in the following order: "Servo All Off," "Focus On," then "Spindle Kick, Tracking On."

## [6] Updating of the firmware

Refer to the "8.3 UPDATING OF THE FIRMWARE."

## 7. DISASSEMBLY

A

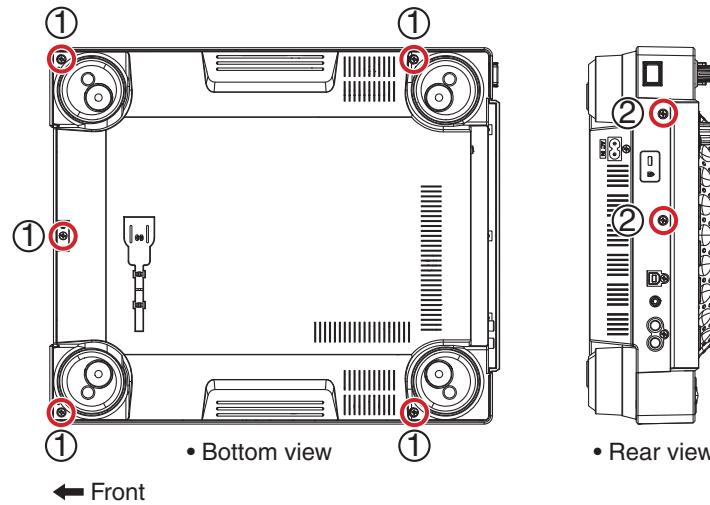

### Note:

- (1) Do NOT look directly into the pickup lens. The laser beam may cause eye injury.
- (2) Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

### Diagnosis

- (1) Remove the five screws. (BPZ30P080FNI)
- (2) Remove the two screws. (BBZ30P060FTB)

B

C

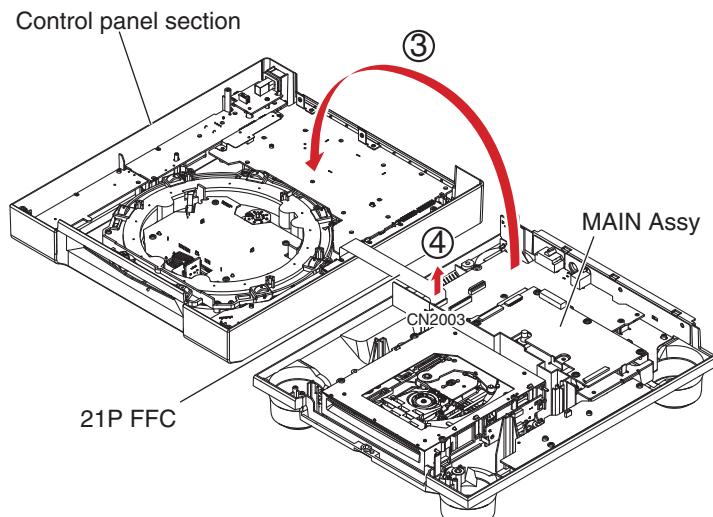

- (3) Remove the control panel section.

### Diagnosis

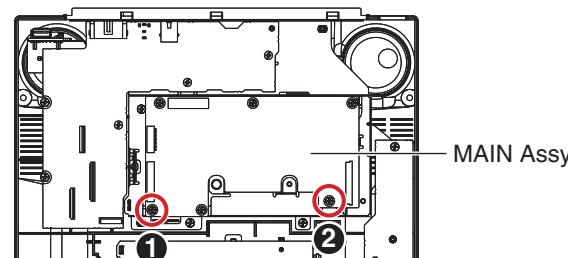

- (4) Disconnect the 21P FFC from control panel section.

E

### Screw tightening order

The other screws are random order.

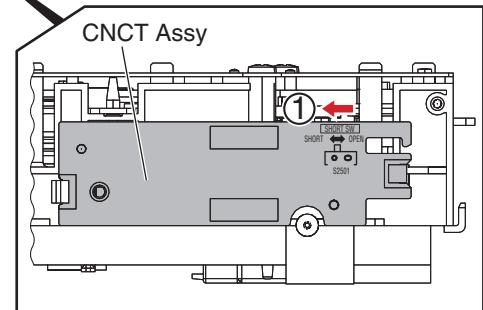

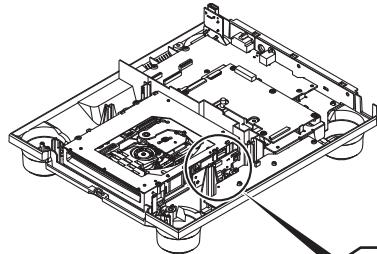

## SLOTIN MECHA Section

- (1) Change the position of the SHORT SW (S2501) on the CNCT Assy to "SHORT".

**Note:**

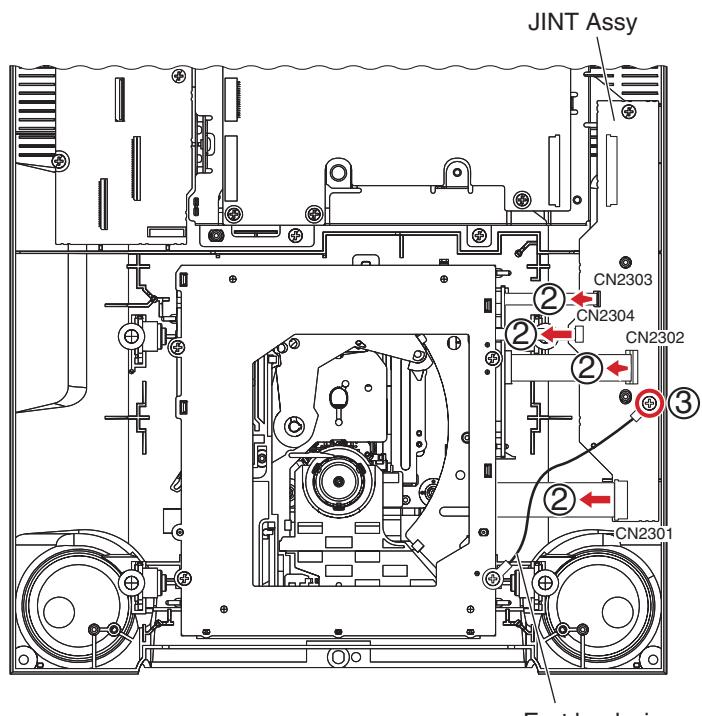

After work, connect the flexible cable on step (2), then change the position to "OPEN".

B

C

- (2) Disconnect the four flexible cables.  
 (3) Remove the earth lead wire by removing the one screw. (BPZ30P080FNI)

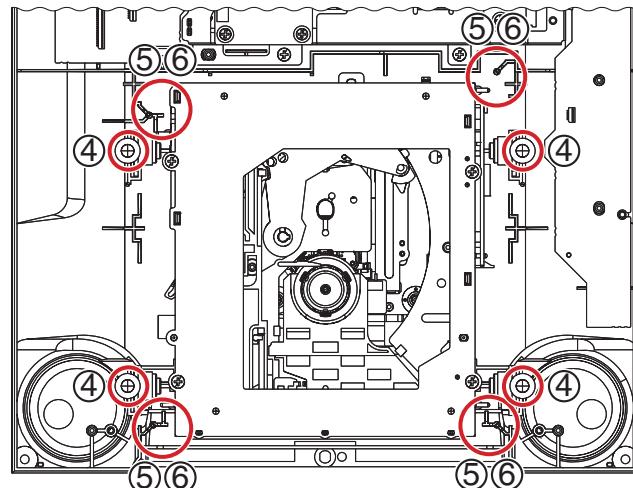

D

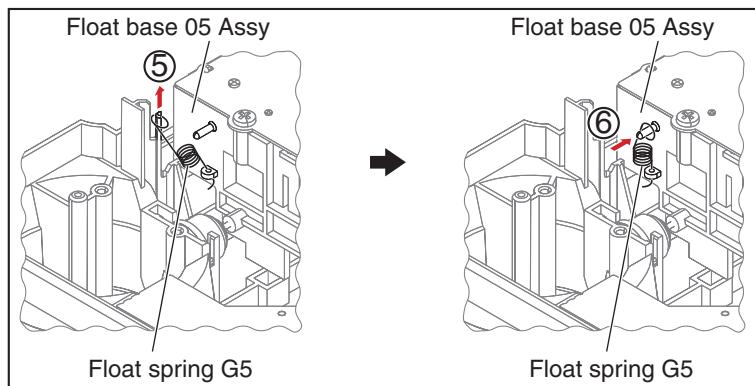

E

F

- A (4) Remove the four DM screws. (DBA1260)  
 (5) Remove the four float springs G5.  
 (6) Hook the four float springs G5 to the four hooks of the float base 05 Assy.

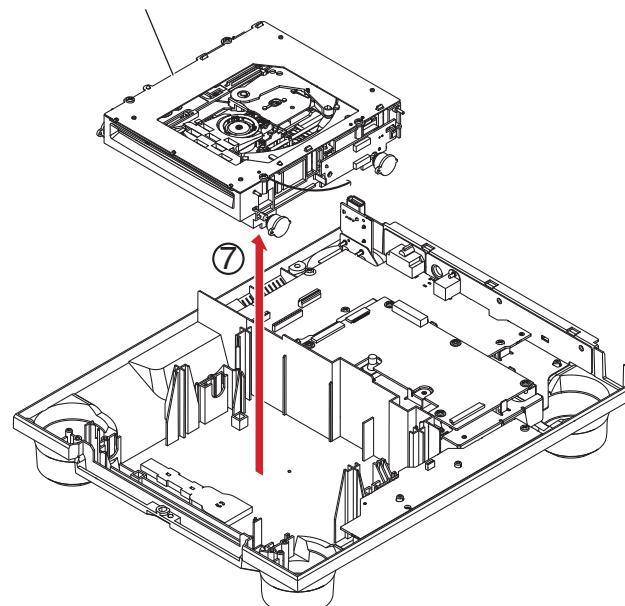

B

C

- D (7) Remove the SLOTIN MECHA section.

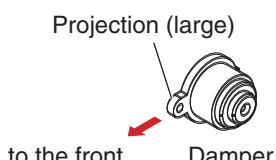

SLOTIN MECHA section

E

#### Direction of the dampers when attaching them

When attaching the dampers, place them so that their projections (large) face front.

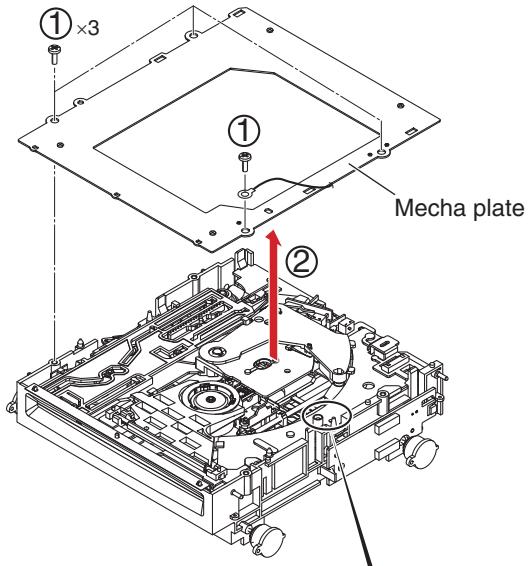

F

## TM Assy-S (VTM091)

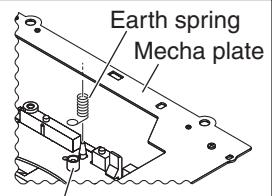

### [1] Mecha Plate

- (1) Remove the four screws. (BPZ30P080FNI)
- (2) Remove the mecha plate.

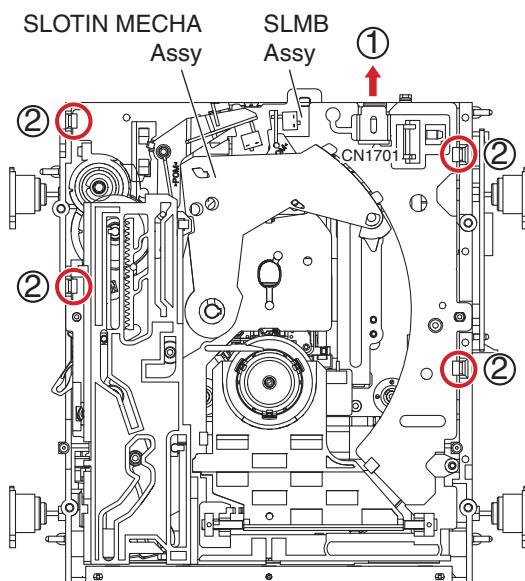

#### Note of earth spring

- Be sure not to lose it.
- Be careful to the installation places.
- Confirm it by viewing.

### [2] SLOTIN MECHA Assy

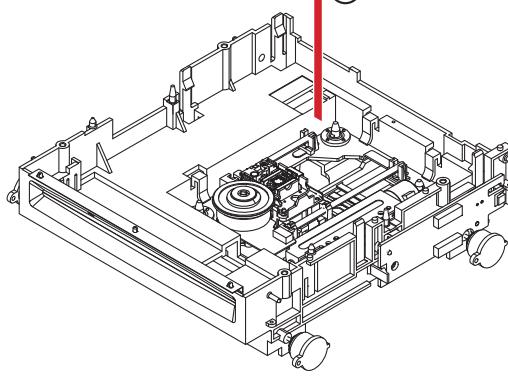

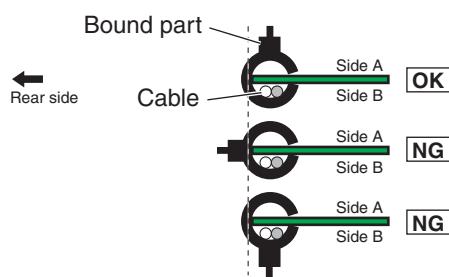

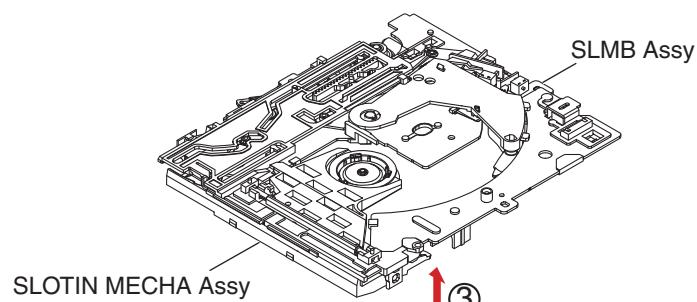

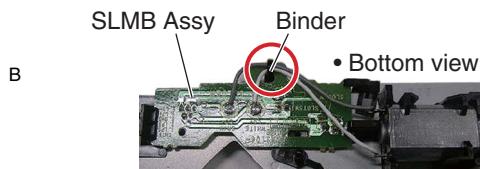

- (1) Disconnect the one flexible cable.
- (2) Unhook the four hooks.

A (3) Remove the SLOTIN MECHA Assy.

**Note on Reassembly**

When binding the cables from the SLMB Assy, be careful that the bound part will not protrude from the edge of the board toward the rear. Bind them so that the bound part will come to the upper side of Side A.

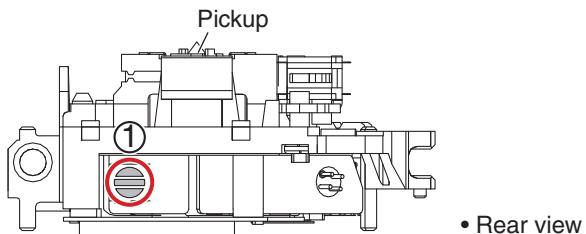

### [3] TM Assy-S (VTM091)

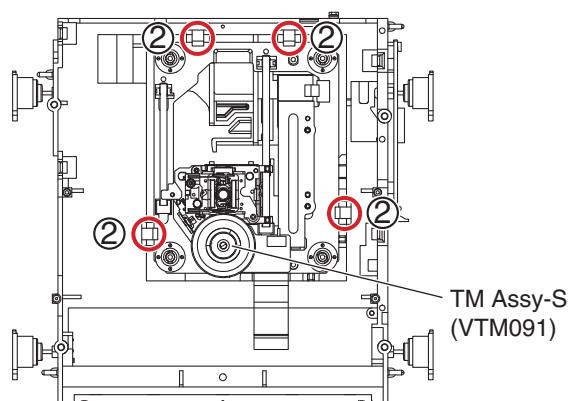

(1) Short-circuit two positions of figure soldering.  
(short)

D Note:

After working, connect the flexible cable, then remove the soldered joint (open).

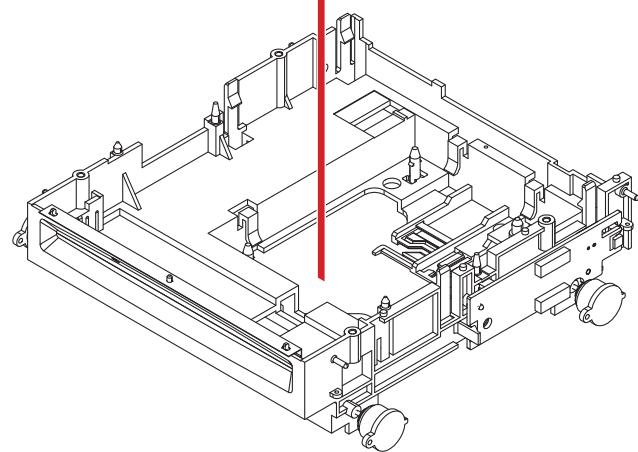

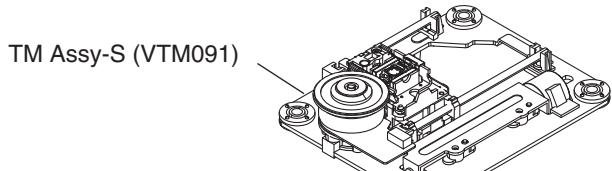

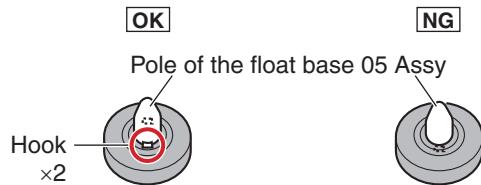

E (2) Unhook the four hooks.

- (3) Release the flexible cables, as required.  
 (4) Remove the TM Assy-S (VTM091).

#### Note on the float rubber installation

A

B

C

D

E

F

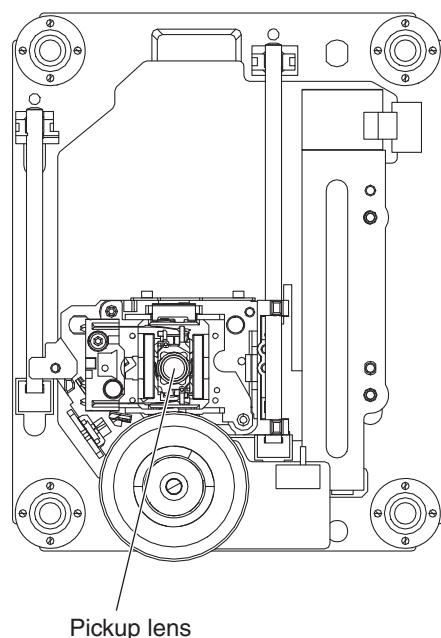

#### Cleaning the pickup lens

Before shipment, be sure to clean the pickup lens,  
 using the following cleaning materials:

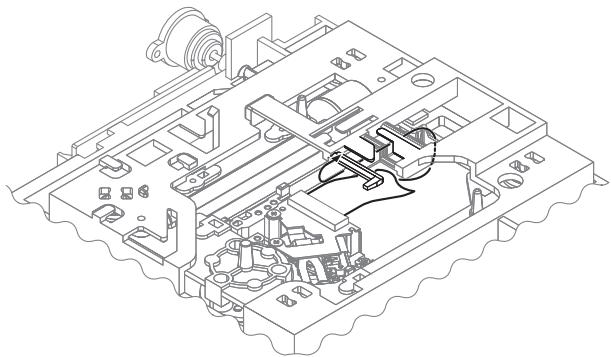

Cleaning liquid : GEM1004

Cleaning paper: GED-008

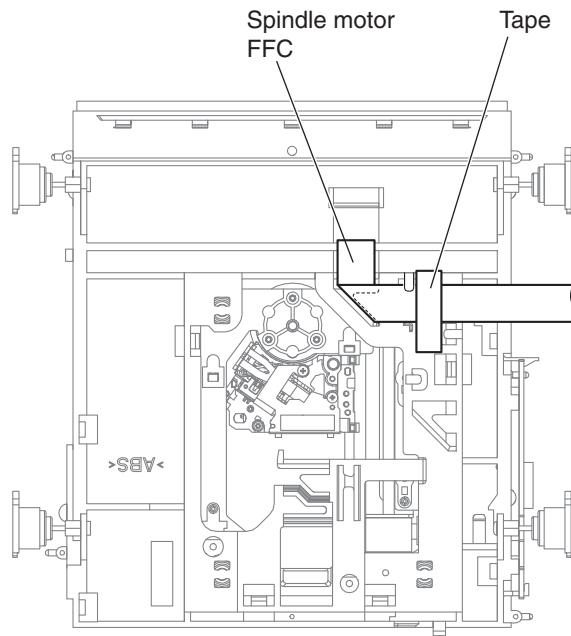

## A ■ Arrangement of the FFC

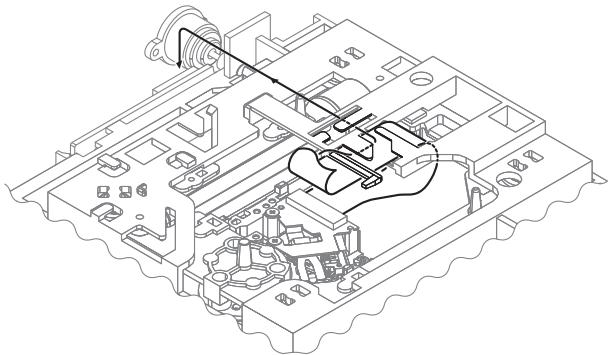

### • Pickup FFC

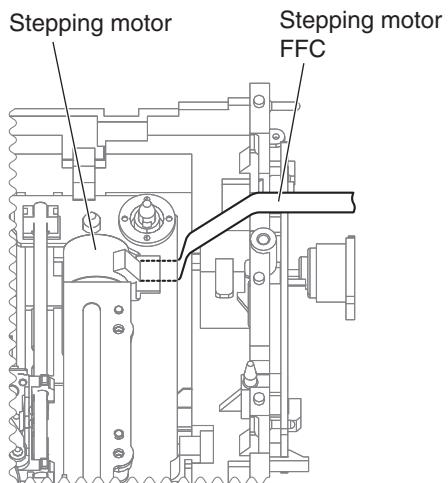

### • Spindle motor FFC

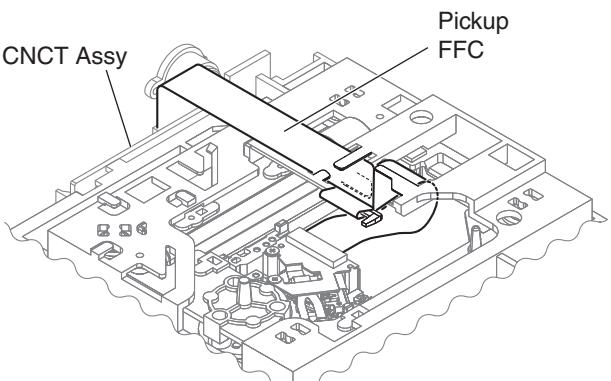

C

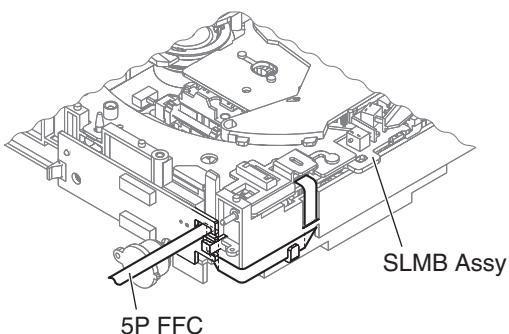

### • Stepping motor FFC

D

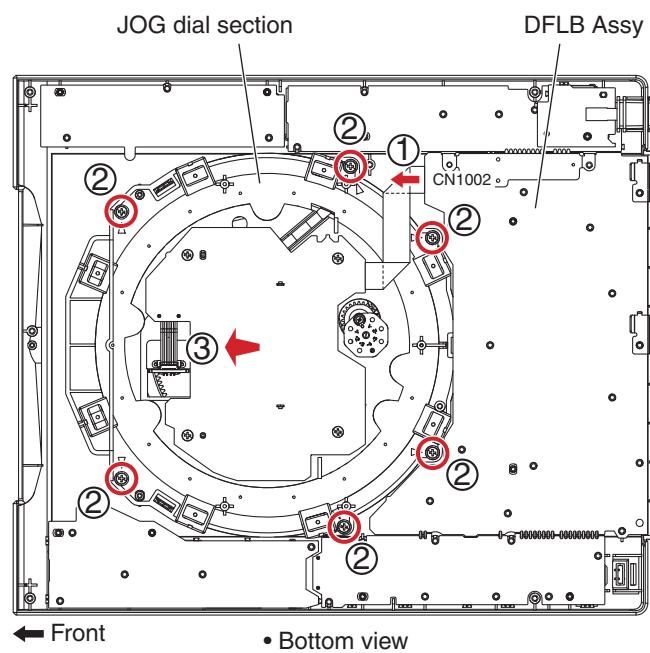

### • 5P FFC

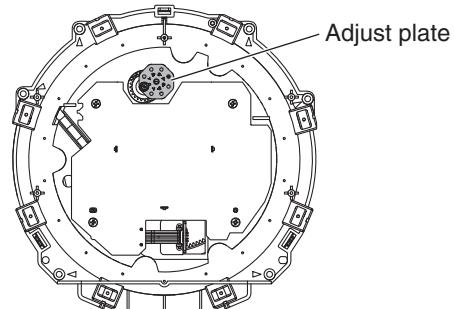

## JOG Dial Section

- (1) Disconnect the one flexible cable.
- (2) Remove the six screws. (BPZ30P080FNI)
- (3) Remove it while pulling JOG dial section to front side.

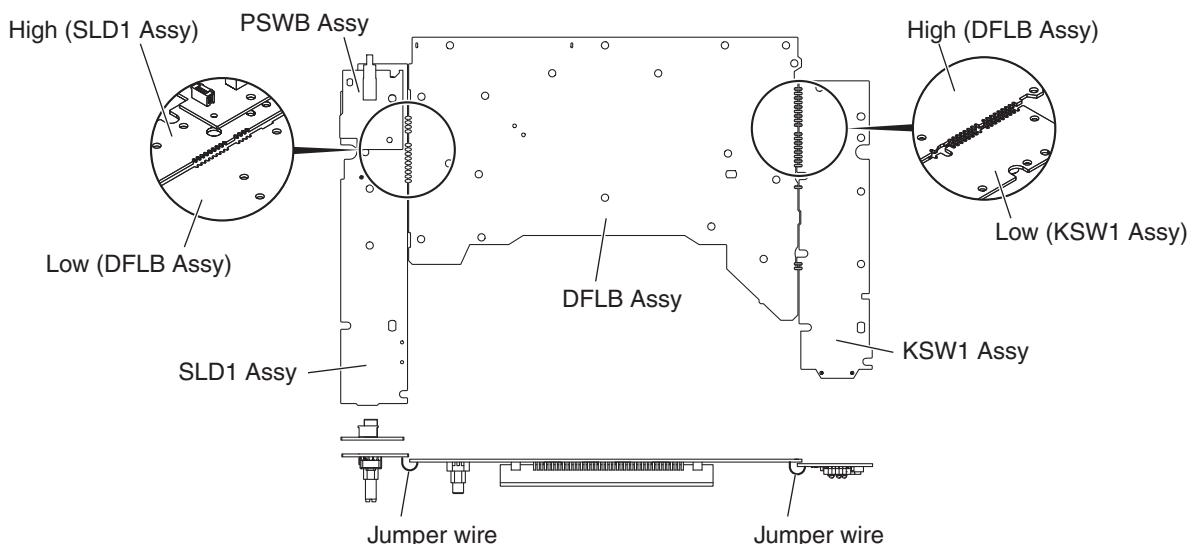

### Adjust plate

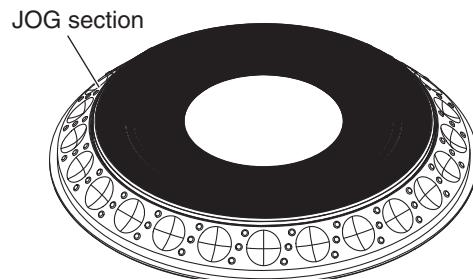

About details of Adjustment etc., refer to the  
“8.4 JOG DIAL ROTATION LOAD ADJUSTMENT”.

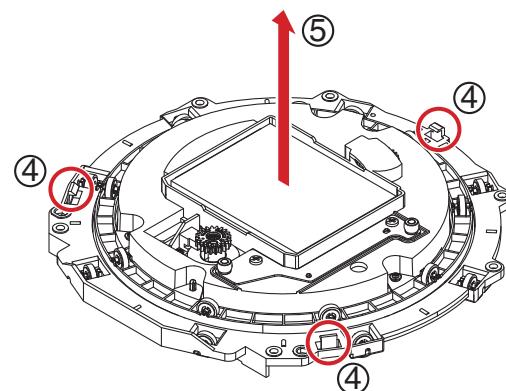

### PCB Assemblies Position

- A  
 (4) Unhook the three hooks.  
 (5) Remove the JOG section.

B

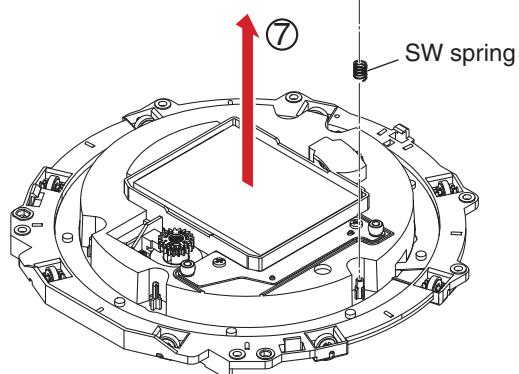

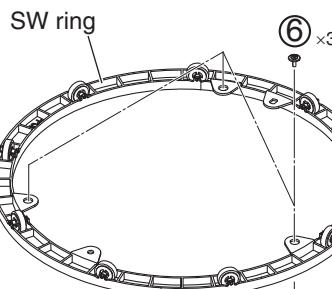

C

- D  
 (6) Remove the three screws. (DBA1265)  
 (7) Remove the SW ring.

**Note:**

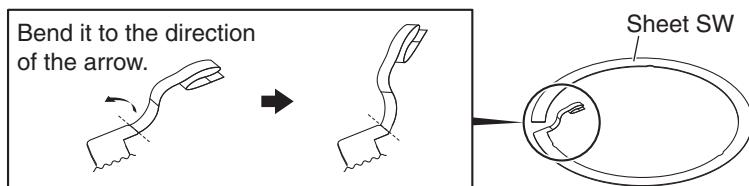

Be careful not to lost SW spring.

F

## Notes on replacing the Sheet SW

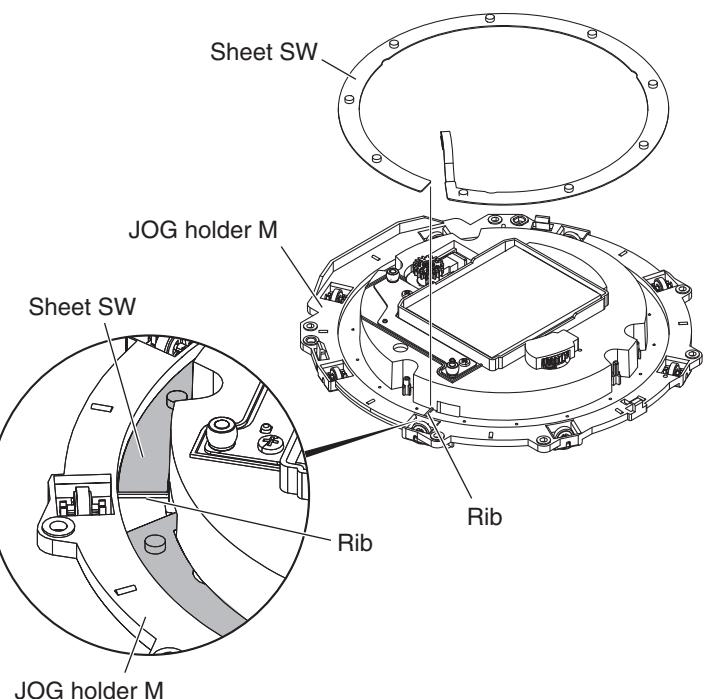

### Styling of the Sheet SW

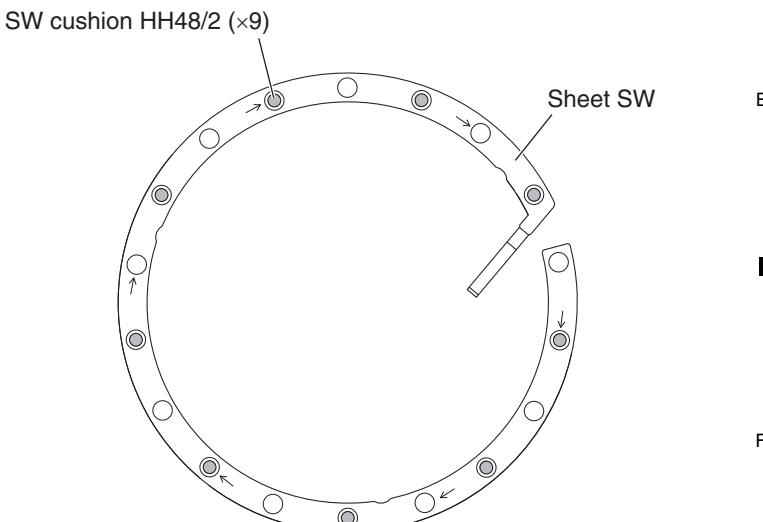

### Pasting position of the Sheet SW

#### Notes:

1. Be careful not to warp the sheet SW.
2. Remove any dirt on the JOG holder M to which the sheet SW is to be adhered. If some adhesive for the old sheet SW remains on the JOG holder M, completely remove it with a cloth moistened with alcohol.
3. Do NOT place the sheet SW so that it is mounted on the rib of JOG holder.
4. When adhering the sheet SW, be careful not to trap air bubbles in it. If air bubbles are formed, remove the sheet SW and adhere a new sheet SW. Do NOT reuse the removed sheet SW.
5. When making a connection, be sure to first release the lock of the connector then securely relock the connector after making the connection.

### Pasting position of the SW cushion HH48/2

## 8. EACH SETTING AND ADJUSTMENT

### 8.1 NECESSARY ITEMS TO BE NOTED

- A Before repairing, be sure to check the version of the firmware, and if it is not the latest one, update to the latest version. Perform the each item when the following parts are replaced.

• MAIN Assy (MAIN CPU)  • Confirmation of the version of the firmware (MAIN CPU)  
• Updating to the latest version of the firmware

• Part of JOG dial section  • JOG dial rotation load adjustment

B

C

### 8.2 USER SETTABLE ITEMS

The following data have been set in each IC.

	Item for Which User's Setting is Available	Setting Value (The factory default settings are indicated in bold.)	Part No.	Part Name	Ref No.	Assy	Content to be Stored
D	A. CUE LEVEL	-36 dB/-42 dB/-48 dB/ -54 dB/ <b>-60 dB</b> /-66 dB/ -72 dB/-78 dB	DYW1796	Flash ROM	IC101	MAIN	UTILITY setting
	MIDI CHANNEL	1 to 16					
	LIBRARY CREATOR	<b>LIBRARY</b> /FOLDER					
	HISTORY NAME	<b>HISTORY</b>					
	TAGLIST NAME	<b>TAG LIST</b>					
	AUTO STANDBY	OFF/ON					
	VERSION No.	—					
E	TIME MODE	<b>TIME/REMAIN</b>	DYW1796	Flash ROM	IC101	MAIN	Statuses of keys
	AUTO CUE	ON/OFF					
	JOG MODE	<b>CDJ/VINYL</b>					

F

## 8.3 UPDATING OF THE FIRMWARE

The device and updater file name for update is the following.

	Device	File Name
MAIN	MAIN CPU	C850MAIN.UPD

A version is not contained in a file name.

### ■ When USB memory is used

Please use USB memory formatted by FAT32. It does not correspond to HFS+.

① A file to update is copied to USB memory.

② Please turn on the power supply, pushing both the buttons of SOURCE SELECT/USB and RELOOP.  
(Please continue pushing until the following caution screen appears.)

③ Starts updating when USB memory is inserted. The FL is displayed the following screen during update.  
At the same time, a current version and rewriting version are displayed.

④ Following screen will be displayed if update is completed,  
the power is shut off once, then the unit back on.

## A ■ When CD-R/RW is used

- ① A file to update is copied to CD-R/RW.
- ② Please turn on a power supply, pushing both the buttons of SOURCE SELECT/DISC and RELOOP.  
(Please continue pushing until the following caution screen appears.)

- ③ The following procedure is the same as that of the case where USB memory is used.

## B ■ Recovery when failing

When the power supply has been turned off on the way, subsequent normal operation becomes impossible.  
When the error code of "E-7024" is displayed, the recovery mode operates when performing the update procedure mentioned above again, and update is performed.

- C In this case, please perform the recovery by USB memory. CD-ROM cannot be used.

D

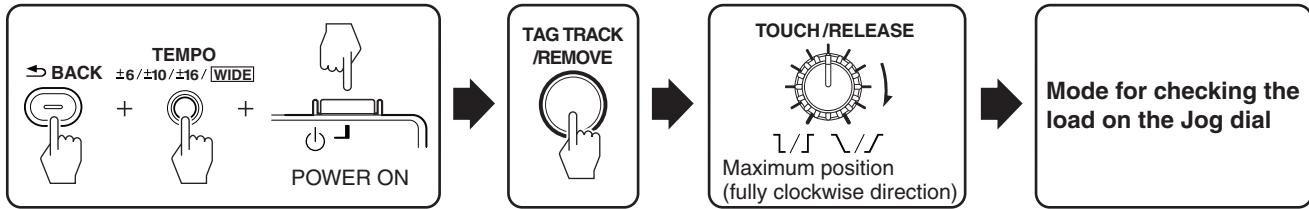

E

F

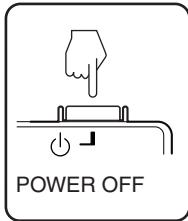

## 8.4 JOG DIAL ROTATION LOAD ADJUSTMENT

### JOG Check Mode : ON

- It is the mode which judges the load (light/- heavy) numerically when rotating the JOG dial.

### JOG Check Mode : CANCEL

### [Measuring method]

- The adjustment value of adjust plate is adjusted to "0" (Refer to Fig. 2).
  - Enters the mode for checking the load on the Jog dial.
  - The jog dial is lightly rotated. Moreover, the direction of the rotation is clockwise.
  - The rotation speed and time are displayed in FL (Refer to Fig. 1).
- The time required so that the rotation may decrease from 3 X speed to 1.5 X speed when maximum speed is only 7 X speed or more is displayed.  
The average of the rotation decrease time of 5 times in all is confirmed in spec or less.  
Spec:  $170 \pm 20$  msec.
- When the rotation decrease time is coming off from spec, the adjustment value of adjust plate is changed, and it does from 2 of above-mentioned to 4.

Number of measurement	Maximum double speed	Measurement value
1 > 1 0 . 8 : 1 2 4 m s		
0 K A V R : 1 1 5 m s		

Judgment OK or NG      Average value

Fig. 1 Example of displaying FL

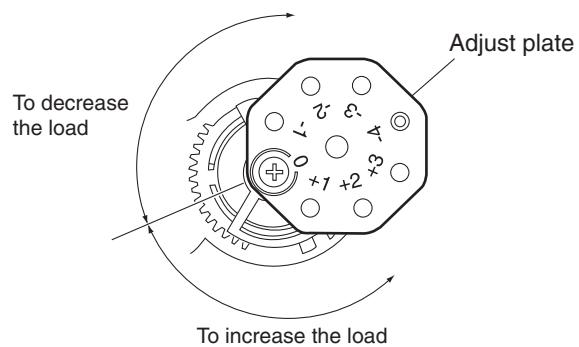

Fig. 2 Adjust plate

### [Load adjustment method]

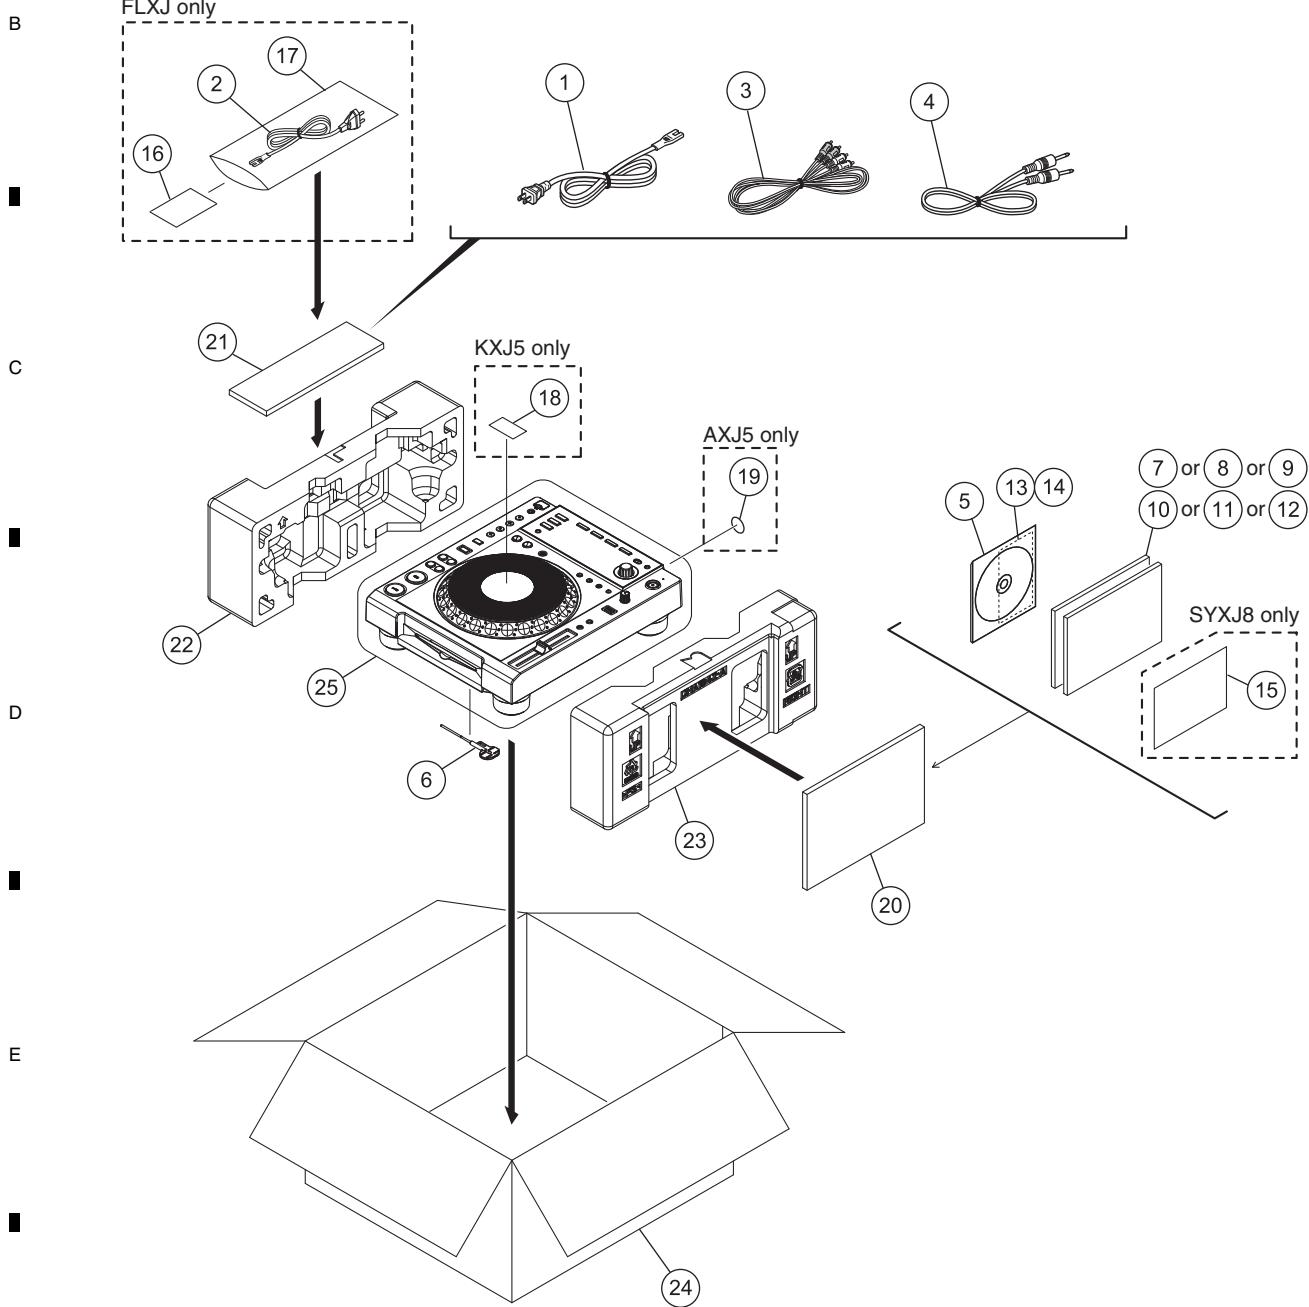

Remove the screw fixing the adjust plate, then screw it into the hole corresponding to the value (-1, -2, -3, -4, +1, +2 or +3) for a load to be added:

- 1, -2, -3, -4 : To decrease the load
- +1, +2, +3 : To increase the load

## 9. EXPLODED VIEWS AND PARTS LIST

- NOTES:**
- Parts marked by “NSP” are generally unavailable because they are not in our Master Spare Parts List.
  - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - Screws adjacent to ▼ mark on product are used for disassembly.
  - For the applying amount of lubricants or glue, follow the instructions in this manual.  
(In the case of no amount instructions, apply as you think it appropriate.)

MOTOR ASSY-S**B SLMB ASSY**

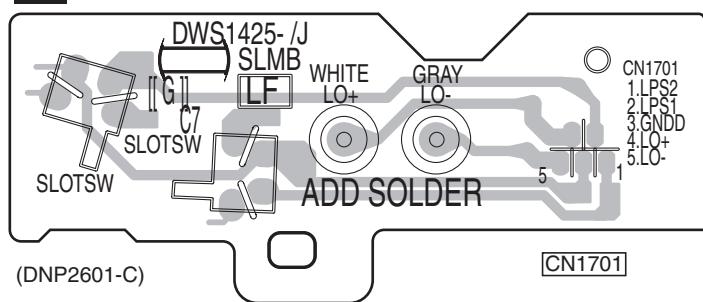

The pin No. indications (1 and 50) near the CN2305 connector and the pin numbers adjacent to the signal names are printed in reverse on the board. On the board, the leftmost pin is labeled Pin No. ① and the rightmost Pin No. ⑤⁹. However, the actual pin numbering is Pin No. ① at rightmost and Pin No. ⑤⁹ at leftmost.

Note that only the printing of the pin numbers is wrong but that that of the signal names is correct. When performing diagnosis, be sure to interpret the pin numbers of the connector in reverse (enumerated right to left).

# 12. PCB PARTS LIST

- NOTES:**
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
  - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - When ordering resistors, first convert resistance values into code form as shown in the following examples.
- Ex.1** When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47 k ohm (tolerance is shown by J = 5%, and K = 10%).

560 Ω → 56 × 10<sup>1</sup> → 561 ..... RD1/4PU [5] [6] [1] J

47 kΩ → 47 × 10<sup>3</sup> → 473 ..... RD1/4PU [4] [7] [3] J

0.5 Ω → R50 ..... RN2H [R] [5] [0] K

1 Ω → IR0 ..... RS1P [1] [R] [0] K

**Ex.2** When there are 3 effective digits (such as in high precision metal film resistors).

5.62 kΩ → 562 × 10<sup>3</sup> → 5621 ..... RN1/4PC [5] [6] [2] [1] F

- Meaning of the figures and others in the parentheses in the parts list.

Example) IC 301 is on the point (face A, 91 of x-axis, and 111 of y-axis) of the corresponding PC board.

IC 301 (A, 91, 111) IC NJM2068V
