1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

2. EXPLODED VIEWS AND PARTS LIST

- NOTES : ● Parts marked by “NSP” are generally unavailable because they are not in our Master Spare Parts List.
 ● The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 ● Screw adjacent to ∇ mark on the product are used for disassembly.

2.1 PACKING

(1) PARTS LIST

Mark	No.	Description	Parts No.

5. PCB PARTS LIST

NOTES : ● Parts marked by “NSP” are generally unavailable because they are not in our Master Spare Parts List.

● The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

● When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560 Ω \rightarrow 56 \times 10¹ = 561 RD1/4PU $\begin{matrix} \boxed{5} & \boxed{6} & \boxed{1} \end{matrix}$ J

47k Ω \rightarrow 47 \times 10³ = 473 RD1/4PU $\begin{matrix} \boxed{4} & \boxed{7} & \boxed{3} \end{matrix}$ J

0.5 Ω \rightarrow R50 RN2H $\begin{matrix} \boxed{R} & \boxed{5} & \boxed{0} \end{matrix}$ K

1 Ω \rightarrow 1R0 RS1P $\begin{matrix} \boxed{1} & \boxed{R} & \boxed{0} \end{matrix}$ K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω \rightarrow 562 \times 10¹ = 5621 RNI/4PC $\begin{matrix} \boxed{5} & \boxed{6} & \boxed{2} & \boxed{1} \end{matrix}$ F

■ CONTRAST OF PCB ASSEMBLIES

SUBB Unit

RWZ4092 and RWZ4102 have the same construction except for the following:

Mark	Symbol and Description	Part No.		Remarks
		RWZ4092	RWZ4102	
	S1525	Not used	VSG1010	*

Note*: Refer to **I**.

TRN 2 Unit

Although RWZ4093 and RWZ4099 are different in part number, they consist of the same components.

MAIN Unit

RWZ4091, RWZ4089, RWZ4095 and RWZ4101 have the same construction except for the following:

Mark	Symbol and Description	Part No.				Remarks
		RWZ4091	RWZ4089	RWZ4095	RWZ4101

6. ADJUSTMENT

● Adjustment points and Measurement points are shown in Fig. 6-4.

6.1 MECHANICAL ADJUSTMENT

6.1.1 Tape Speed Adjustment

● Perform this adjustment in the test mode.

● Test Mode Setting

- (1). Press the TIME/COUNT and RESET keys of DECK I together with the PAUSE key of DECK II.
- (2). The speed becomes normal when the PLAY key is pressed, and double when the FF key is pressed.
- (3). To cancel the TEST mode, press the RESET key of DECK I or turn off the power.

No.	DECK	Mode	Test Tape	Adjusting Point	Specifications/Ratings (Playback Frequency)	Remarks
1	I	Double Speed PLAY	STD-301 (3 kHz) or NCT-111	Check	5100 Hz \pm 510 Hz	
2	II			VR851	Within \pm 10 Hz against the measurement value of the step 1 (DECK I).	
3	I	Normal Speed PLAY		VR801	2980 Hz \pm 5 Hz	
4	II			VR852	Within \pm 5 Hz against the measurement value of the step 3 (DECK I).	

6.2 ELECTRICAL ADJUSTMENT

Adjustment Conditions

- (1). The mechanical adjustments must be completed first.
- (2). The head must be cleaned and demagnetized.
- (3). Turn the power on allow the deck to warm up for at least a few minutes before commencing any electrical adjustments.
- (4). The reference signal is 0 dBV = 1 Vrms.
- (5). Connect a10 k Ω load resistance to the OUTPUT terminals.
- (6). Unless otherwise specified, the switches listed below are left in the positions indicated.

DOLBY NR : OFF
TAPE SELECTOR : NORM

List of Adjustments

■ Playback Section

- (1). Head Azimuth Adjustment
- (2). Playback Level Automatic Adjustment

■ Recording Section

- (1). Bias Oscillator Adjustment
- (2). Recording Bias and Recording Level Automatic Adjustment

NOTE: This unit has an automatic tape selection feature.

Test Tape

STD-331E : Playback adjustment (See Fig. 6-1)

STD-632 : NORMAL blank tape

STD-622 : CrO2 blank tape

STD-611 : METAL blank tape

* As the reference recording level is 250 nwb/m for STD-331E, the recording level will be higher by 4 dB for STD-331B (160nwb/m). When adjusting, pay careful attention to the type of tape used.

*Dolby noise reduction and HX Pro headroom extension manufactured under license from Dolby Laboratories Licensing Corporation. HX Pro originated by Bang & Olufsen.
"DOLBY", the double-D symbol and "HX PRO" are trademarks of Dolby Laboratories Licensing Corporation.*

Fig. 6-1 Constants of the Test Tape STD-331E

Fig. 6-2 Head Azimuth Adjustment

PLAY BACK

RECORDING

Fig. 6-3 Frequency Response Zone

6.2.1 Playback Section

(1). Head Azimuth Adjustment

No.	Mode	Input Signal and Test Tape	Adjustment Location	Measurement Location	Adjustment Value	Remarks
1	PLAY	Play the 10 kHz/-20 dB section of STD-331E test tape.	Head azimuth adjustment screw (See Fig. 6-2)	LINE OUT	Maximum playback signal level	
2	STOP	Lock the screw with silicon bond after completing adjustment.				

(2). Playback Level Automatic Adjustment

- ① Press the test mode, set both TIME/COUNT and RESET keys of DECK I together with the PAUSE key of DECK II all together.
- ↓
- ② When the BLE key (DECK II) is pressed, enter the Automatic adjustment mode.
- ↓
- ③ Set the test tape STD-331E, 315Hz/0dB.
- ↓
- ④ When the PLAY key (DECK I) is pressed, " P " flashes on the DECK I side counter, and adjustment of playback level is started automatically.
 - When correct adjustment has been completed, the mechanism stops for about 5 seconds, and " P " lights on the DECK I side counter.
 - At this time, flashing of " P " or " ERR " indicate adjustment error.
- ↓
- ⑤ When the PLAY key (DECK II) is pressed, adjustment of playback level is started automatically same as ④.

CT-W806DR, CT-07D

6.2.2 Recording Section

(1). Bias Oscillator Adjustment

No.	Mode	Input Signal and Test Tape	Adjustment Location		Measurement Location	Adjustment Value	Remarks
1	REC	Load the STD-611 test tape with no input signal.	DECK I	L1401	TP 11	107 kHz \pm 0.3 kHz	If the adjustment value on the left cannot be obtained values within 107kHz $^{+2}_{-2.3}$ kHz are also satisfactory.
			DECK II	L401	TP 21		

(2). Recording Bias and Recording Level Automatic Adjustment

① Press the test mode, set both TIME/COUNT and RESET keys of DECK I together with the PAUSE key of DECK II all together.

↓

② When the BLE key (DECK II) is pressed, enter the Automatic adjustment mode.

↓

③ Set the test tape STD-632.

↓

④ When the REC key (DECK I) is pressed, " B " flashes on the counter, and adjustment of bias and recording level is started automatically.

- When correct adjustment has been completed, the mechanism stops for about 50 seconds, and " PBR " lights on the DECK I side counter to indicate that all adjustments have been completed.
- At this time, flashing of " B " indicates a bias adjustment error, while flashing of " R " indicates a recording level error.

↓

④ When the REC key (DECK II) is pressed, adjustment of bias and recording level is started automatically same as ④.

↓

⑤ With correct adjustment, " PBR " lights on the counter (DECK I and DECK II). When the both sides of the counter does not light, no adjustment value is written into the memory.

↓

⑦ When the STOP key is pressed, the automatic adjustment mode is cancelled. At this time, the counter display becomes " 10 " on the DECK I side and " TUNE " on the DECK II side.

DECK I	DECK II
10	TUNE

FL Display Example

Adjustment NG: The following are possible reasons.

- No recording
- No adjustment tape. Near the tape end.
- Tape is extremely damaged.
- Circuit trouble (defective contact etc.)

Note: For repeat adjustment, press the STOP key (DECK I or DECK II) to leave automatic adjustment mode, and then start again.

6	$\overline{\text{PDDA}}$	I	DA reset control pin
7	$\overline{\text{PD}}$	I	Power-down pin
8	$\overline{\text{RST}}$	I	Reset input pin ("L": Reset)
9	TSTIO1	I/O	Test I/O pin 1
10	TSTIO2	I/O	Test I/O pin 2
11	TSTIO3	I/O	Test I/O pin 3
12	DVB	—	Digital circuit board power supply pin
13	SDIN2	I	Serial data input pin 2. (OPCL: "H") Correspondence to left-justified 16, 20 bits
14	SDAD	O	Serial data output pin 2. (OPCL: "H") Correspondence to left-justified 16, 20 bits. Common setting with SDIN2.
15	SDOUT2	O	Serial data output pin 3. (OPCL: "H") Correspondence to left-justified 16, 20 bits
16	SDDA	I	Serial data input pin 3. (OPCL: "H") Correspondence to left-justified 16, 20 bits. Common setting with SDOUT2.
17	SDDA2	I	Serial data input pin 4. (OPCL: "H") Correspondence to left-justified 20 bits (BCLK: 16 bits at the time of 32 fs)
18	SDOUT3	O	Serial data output pin 4. (OPCL: "H") Correspondence to left-justified 20 bits (BCLK: 16 bits at the time of 32 fs)
19	SDOUT1	O	Serial data output pin 1. Correspondence to left-justified 16, 24 bits/ right-justified 16 bits
20	SDIN1	I	Serial data input pin 1. Correspondence to left-justified 16, 24 bits/ right-justified 16 bits

- The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.

No.	Name	I/O	Description
21	SMODE	I	Interface clock selection pin. I/O setting for each clock pin of LRCK and BCLK "L": Slave mode (22, 23 input) "H": Master mode (output)
22	BCLK	I/O	Clock I/O pin for serial data input
23	LRCK	I/O	L/R channel identification signal I/O pin
24	CLKO	O	Master clock output pin
25	DVDD	—	Digital power supply pin
26	DVSS	—	Digital ground pin
27	NC	—	
28	XTI	I	Crystal oscillator input pin
29	XTO	O	Crystal oscillator output pin
30	TSTI2	I	Test input pin 2
31	$\overline{\text{CS}}$	I	Chip select input pin for microcomputer interface
32	$\overline{\text{WRQ}}$	I	Command resistor reset input pin for microcomputer interface
33	DVSS	—	Digital ground pin
34	DVDD	—	Digital power supply pin
35	SCLK	I	Clock input pin for serial data input for microcomputer interface
36	SI	I	Serial data input pin for microcomputer interface
37	WRDY	O	Data write ready output pin for microcomputer interface. Hi-2 status with CS = "H".
38	DRDY	O	Output data ready output pin for microcomputer interface
39	SO	O	Serial data output pin for microcomputer interface. Hi-2 status with CS = "H".
40	$\overline{\text{CASRF}}$	O	External DRAM CAS/dummy SRAM refresh pin
41	$\overline{\text{RASCE}}$	O	External DRAM RAS/dummy SRAM-CE pin

No.	Name	I/O	Description
42	\overline{WE}	O	External SRAM/dummy SRAM/DRAM write signal output pin
43 50	A16 A9		External RAM address pin (A16 becomes theMSB.)
51	DVSS	—	Digital ground pin
52	DVDD	—	Digital power supply pin
53 61	A8 A0	O	External RAM address pin (A0 becomes the LSB.)
62	\overline{OC}	O	External SRAM/dummy SRAM/DRAM output enable signal output pin
63 70	IO0 IO7	I/O	Data I/O pin for external RAM
71	DVSS	—	Digital ground pin
72	DVDD	—	Digital power supply pin
73	DZFSET	I	Zero point detection set pin. "H": DZF output "L": DZF output → "L"
74	DVSS	—	Digital ground pin
75	DVDD	—	Digital power supply pin
76 77	DVB	—	Digital circuit board power supply pin
78	NC	—	
79	DZF2	O	Zero input detection pin (for DAC 2)
80	DZF1	O	Zero input detection pin (for DAC 1)
81	AVB	—	Analog circuit board power supply pin
82	AOUTR2	O	DAC2 R ch analog output pin 2
83	AOUTL2	O	DAC2 L ch analog output pin 2
84	AOUTR1	O	DAC1 R ch analog output pin 1
85	AOUTL1	O	DAC1 L ch analog output pin 1
86	VRDAL	I	DAC section reference voltage input pin. Normally connected to analog ground.
87	AVSS	—	Analog ground pin
88	AVDD	—	Analog power supply pin

No.	Name	I/O	Description
89	VRDAH	I	DAC section reference voltage input pin. Normally connected to AVDD2, capacitors of 0.1 μ F and 10 μ F are connected between this and VRDAL.
90	NC	—	
91	AINR-	I	ADC R ch analog reversion input pin
92	AINR+	I/O	ADC R ch analog nonreversion input pin
93	AINL-	I	ADC L ch analog reversion input pin
94	AINL+	I	ADC L ch analog nonreversion input pin
95	VCOM	O	Common voltage pin. Connected by capacitors of 0.1 μ F and 10 μ F to analog ground.
96	VRADL	I	ADC section reference voltage input. Normally connected to analog ground.
97	AVSS	—	Analog ground pin
98	AVDD	—	Analog power supply pin
99	VRADH	I	ADC section reference voltage input pin. Normally connected to AVDD1, capacitors of 0.1 μ F and 10 μ F are connected between this and VRADL.
100	AVB	—	Analog circuit board power supply pin

■ AK4310-VM (IC1302: CORE UNIT)

- D/A Converter
- Pin Function

No.	Name	I/O	Description
1	TST1	I	Test pin (pull-down pin) Open or connected to "L".
2	DVDD	—	Digital power supply pin
3	DVss	—	Digital ground pin
4	PD	I	Power-down pin. When this pin is made "L", the filter and the modulator are reset and power-down status is reached.
5	RST	I	Reset pin
6	MCLK	I	Master clock pin. Input of the external CMOS clock.
7	CKS	I	Clock selection pin. The frequency of the clock entered to the CLK pin is selected. "H": CLK = 384 fs
8	BICK	I	Serial bit clock pin. Clock for latching of serial data.
9	SDATA	I	Serial data input pin. 16 bit serial data are entered from the MSB as 2's complement.
10	LRCK	I	L/R clock pin. The channel of the entered serial data is decided.
11 14	NC	—	

No.	Name	I/O	Description
15	AOUTR	O	R ch analog output pin
16	AOUTL	O	L ch analog output pin
17	VCOM	O	Common voltage pin, AVDD/2. Connected to AVSS via a 10 μF electrolytic capacitor and a 0.1 μF ceramic capacitor.
18	AVDD	—	Analog power supply pin
19	AVss	—	Analog ground pin
20 21	NC	—	
22	VREFH	I	"H" reference voltage input pin. The difference between the input voltages to VREFH and VREFL decides the full scale of the D/A output. Normally, VREFH is connected to AVDD and VREFL is connected to AVSS, And both pins are connected by a 0.1 μF ceramic capacitor close by.
23	VREFL	I	"L" reference voltage input pin
24	DZF	O	Zero input detection pin. The data entered to the SDATA pin are repeated 8192 times for both channels, and the signal becomes "H" at the time of zero.

7.2.7 Test Mode No. 3 (Automatic Adjustment)

For details, refer to "6. ADJUSTMENT".

DECK I Display	DECK II Display	Input Key	Adjustment and Check
PBR	PBR	STOP FWD REV REC	<ol style="list-style-type: none"> ① Press the BLE key to enter the automatic adjustment mode. ② The individual adjustment values will be cleared when the STOP key (DECK I), the PAUSE key (DECK II), and the MUTE key (DECK II) are pressed together. ("PER" will flash.) ③ Execute adjustment of playback level. ④ Execute adjustment of recording bias and recording level. ⑤ When all adjustments have been completed, "PBR" lights on the DECK I and DECK II counter. ⑥ When the STOP key (DECK I or DECK II) is pressed, test mode No. 1 is set.

CT-W806DR, CT-07D

7.2.8 Test Mode No. 7 (NTF Error Code Check Mode)

■ Entering the NTF error code check mode

Press the TIME/COUNT key of DECK II.

When pressed again, the counter changes as follows.

1 ⇒ 2 ⇒ 3 ⇒ 1

■ Exiting the NTF error code check mode

- When the STOP key (DECK I) is pressed, test mode No. 1 is set.
- When repair has been completed, reset the recorded error. (Press the STOP key, and press the TIME/COUNT key (DECK I) and the MUTE key (DECK II) immediately after entry into test mode.)

BLE	B1 (DECK II) B3 (DECK I)	BLE Adjustment Error	<ul style="list-style-type: none"> • The take-up side reel table stops during BLE operations. • The sensor at the reel table is faulty. • Tape end is set.
	B2 (DECK II) B4 (DECK I)	BLE Adjustment Error	<ul style="list-style-type: none"> • The signals were not recorded during BLE operations. • The Internal oscillator is not oscillation.
Mechanism	M3	DECK I is locked	<ul style="list-style-type: none"> • The mechanism and the half are engaged in DECK I.
	M4	DECK II is locked	<ul style="list-style-type: none"> • The mechanism and the half are engaged in DECK II.
Cassette Door	L1	DECK I Door Loading	<ul style="list-style-type: none"> • Closing has been tried with the tape inserted upside down. • Complete opening is not possible because an obstacle has been hit.
	L2	DECK II Door Loading	

* B3 and B4 on the DECK I side and B1 and B2 on the DECK II side light for the error No. of BLE errors.

■ Resetting the error code

To reset, press the TIME/COUNT key of DECK I and MUTE key of DECK II together.

8. PANEL FACILITIES AND SPECIFICATIONS

■ PANEL FACILITIES

- The illustration shows the condition in which the sealing panel is open.

① STANDBY/ON switch

The STANDBY/ON switch activates the secondary transformer only. Even when the switch is in the STANDBY position, there will be a power flow to the deck's circuits as long as the power cord is connected to a power outlet. When the STANDBY/ON switch is left ON, standby mode is controlled by the connected amplifier's System Remote Control (SRC) function. Press the POWER button on the remote control unit to select the standby mode. This mode is displayed as "STBY" on the DECK II counter.

② DECK I operation buttons

- ◀ : Reverse playback
- : Stop
- ▶ : Forward playback
- ◀◀/MS : Fast reverse/music search
- ▶▶/MS : Fast forward/music search
- : Recording mute
- ⏸ : Pause
- : Recording

③ DECK I counter reset button (RESET)

④ DECK I counter mode button (TIME/COUNT)

⑤ DECK I OPEN/CLOSE button (▲)

- If the tape is moving (recording, playback, tape winding, etc.), press the stop (■) button before pressing this button.

NOTE:

If the power is turned off while the tape is moving, the cassette door may remain locked. In this case, turn the power on before pressing the OPEN/CLOSE (▲) button.

⑥ Function display

⑦ Digital indicator

Turns off while the Digital-NR is OFF.

⑧ FLEX button

DECK I/II BLE XD button

PARALLEL REC button

⑨ DECK II OPEN/CLOSE button (▲)

- If the tape is moving (recording, playback, tape winding, etc.), press the stop (■) button before pressing this button.

NOTE:

If the power is turned off while the tape is moving, the cassette door may remain locked. In this case, turn the power on before pressing the OPEN/CLOSE (▲) button.

⑩ DECK II counter mode button (TIME/COUNT)

⑪ DECK II counter reset button (RESET)

⑫ DECK II operation buttons

- ◀ : Reverse playback
- : Stop
- ▶ : Forward playback
- ◀◀/MS : Fast reverse/music search
- ▶▶/MS : Fast forward/music search
- : Recording mute
- ⏸ : Pause
- : Recording

⑬ REV MODE button

DOLBY* NR button (OFF/B/C)

DIGITAL IN button

CD-DECK SYNCHRO recording button (CD SYNC)

ALCA button

COPY MODE button

TDNS : TDNS copy (Normal speed copy).

NOR : Normal speed copy.

HI : High speed copy.

COPY START button

⑭ Recording level control (REC LEVEL)

⑮ Headphones jack (PHONES)

⑯ Microphone jack (MIC)

⑰ MIC LEVEL control

⑱ TIMER switch (TIMER REC/OFF/PLAY) (CT-W806DR only)

REC : Set to this position to perform timer recording.

OFF : Set to this position under ordinary conditions (when not using the timer or repeat functions).

PLAY : Set to this position to perform timer playback. When the switch is set to this position during normal playback, repeat playback of a single tape can be performed.

■ FUNCTION DISPLAY

- ① **DECK I counter indicator**
Normally the tape counter or time counter is displayed.
It flashes for 4 seconds after turning the power on.
- ② **ALCA SYSTEM indicator**
Lights when the ALCA system is used.
- ③ **DIGITAL IN indicator**
This indicator light when the DIGITAL IN button is pressed.
- ④ **CD-DECK SYNCHRO indicator (CD SYNC)**
This indicator lights steadily when the CD SYNC button is pressed and the operation starts.
- ⑤ **FLEX indicator**
This indicator lights when the FLEX button is pressed.
- ⑥ **DECK II counter indicator**
Normally the tape counter or time counter is displayed.
It flashes for 4 seconds after turning the power on.
- ⑦ **DECK II tape transport mode indicators**
- ⑧ **DECK II AUTO BLE XD indicator**
- ⑨ **DOLBY NR B/C indicator**
- ⑩ **Level meter**
Holds peak for about 1.3 seconds.
The "●" mark beside the 0 dB mark indicates the Dolby NR system standard level.
- ⑪ **Reverse mode indicator**
- ⑫ **DECK I AUTO BLE XD indicator**
- ⑬ **DECK I tape transport mode indicators**

■ SPECIFICATIONS

System	4-track, 2-channel stereo
Heads	"Hard Permalloy" recording/playback head x 2 "Ferrite" erasing head x 2
Motor	DC servo motor x 2 Loading motor x 2
Wow and Flutter	0.09% (WRMS) ±0.19% (DIN)
Fast Winding Time	Approximately 100 seconds (C-60 tape)
Frequency Response	
-20 dB recording:	
TYPE IV (Metal) tape	20 to 20,000 Hz
TYPE II (High/CrO ₂) tape	20 to 19,000 Hz
TYPE I (Normal) tape	20 to 18,000 Hz
Signal-to-Noise Ratio	
Dolby NR OFF	More than 57 dB
Signal-to-Noise Ratio (when Digital NR ON)	
Dolby NR B or C-type ON	90 dB
Dolby NR OFF	82 dB (TYPE I tape, 3rd distortion 3%, IEC. DIN AUDIO)
Harmonic Distortion	No more than 0.8% (at -4 dB: 160 nwb/m)
Input (Sensitivity)	
LINE (INPUT)	100 mV (Input impedance 53 kΩ)
Output (Reference level)	
LINE (OUTPUT)	0.5 V (Output impedance 1.9 kΩ)
Headphones	1.33 mW (Load impedance 32 Ω)
Miscellaneous	
Power Requirements	
UK model	AC 230-240 V, 50/60 Hz
European model	AC 220-230 V, 50/60 Hz
Multivoltage model	AC 110/120-127/220/230-240 V (Switchable), 50/60 Hz
US, Canadian model	AC 120 V, 60 Hz
Power Consumption	25 W
Dimensions	420(W) x 125(H) x 250(D) mm
Weight (without package)	4.7kg (10 lb 6 oz)

Subfunctions

- Automatic reverse
- DOLBY HX PRO system
- DOLBY B/C type NR systems
- Music search up to ±15 selections
- Synchronized copy start
- High-speed and normal-speed copy (DECK I → DECK II)
- Relay recording
- Parallel recording
- Relay playback/blank skip
- CD-DECK SYNCHRO recording capability
- Peak level meter with peak-hold function
- Automatic space recording mute
- Automatic tape selector
-  System remote control available
- 2-mode electronic 4-digit twin tape counter
- Headphone jack
- DIGITAL FLEX system (Frequency Level Expander)
- DIGITAL TDNS system (Tape Duplication Noise Suppressor)
- DIGITAL ALCA system (Auto Level Control with tape Analysis)
- DIGITAL SUPER AUTO BLE XD system
- LAST MEMORY
- DIGITAL NR
- Legato Link Conversion
- Power Loading/Eject
- DIGITAL SYNCHRO recording capability
- MIC MIXING
- MPX filter (Interlocks with DOLBY NR)

Accessories

Operating instructions	1
Connection cord with pin plugs	2
 Remote control cord	1
CD-DECK SYNCHRO control cord	1
Optical fiber cable (except for UK and European models)	1
