# SAFETY INFORMATION

A

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

- Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

## WARNING

- B This product may contain a chemical known to the State of California to cause cancer, or birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

# 1. SERVICE PRECAUTIONS

## 1.1 NOTES ON SOLDERING

- A
- For environmental protection, lead-free solder is used on the printed circuit boards mounted in this unit. Be sure to use lead-free solder and a soldering iron that can meet specifications for use with lead-free solders for repairs accompanied by reworking of soldering.
  - Compared with conventional eutectic solders, lead-free solders have higher melting points, by approximately 40 °C. Therefore, for lead-free soldering, the tip temperature of a soldering iron must be set to around 373 °C in general, although the temperature depends on the heat capacity of the PC board on which reworking is required and the weight of the tip of the soldering iron.

Do NOT use a soldering iron whose tip temperature cannot be controlled.

- B
- Compared with eutectic solders, lead-free solders have higher bond strengths but slower wetting times and higher melting temperatures (hard to melt/easy to harden).

The following lead-free solders are available as service parts:

- Parts numbers of lead-free solder:  
GYP1006 1.0 in dia.  
GYP1007 0.6 in dia.  
GYP1008 0.3 in dia.

C

D

## 1.2 SERVICE NOTICE

### ■ On Point-of-Sale Demo Mode

- This product is provided with a Demo mode to be used when displayed on a stand in a shop. Regardless of whether the DJ application (Virtual DJ LE) is running on the PC or not, if no operation is performed on this unit within 10 minutes, or press the DECK C/D button while pressing the SHIFT button, Demonstration mode with lighting of the LEDs on the JOG dial is automatically entered.
- E
- To return to the normal operation mode, operate any button other than the SHIFT or DECK C/D buttons or JOG dial or operate any control of this unit.

F

## 2. SPECIFICATIONS

### General – Main Unit

Power supply .....	DC 5 V
Power consumption .....	500 mA
Main unit weight.....	1.6 kg (3.5 lb)
Max. dimensions.....	380 mm (W) × 65 mm (H) × 208.5 mm (D) (14.96 in. (W) × 2.56 in. (H) × 8.21 in. (D))
Tolerable operating temperature.....	+5 °C to +35 °C (+41 °F to +95 °F)
Tolerable operating humidity.....	5 % to 85 % (no condensation)

### Audio Section

Rated output level	
MASTER OUT.....	+13 dBu
Total harmonic distortion	
MASTER OUT.....	0.006 %
Frequency characteristic	
MASTER OUT.....	20 Hz to 20 kHz
S/N ratio (when playing on computer)	
MASTER OUT.....	101 dB (at rated output)
Input impedance	
MIC.....	10 kΩ
Output impedance	
MASTER OUT.....	1 kΩ
PHONES .....	4.7 Ω
USB AUDIO.....	24 bit/Fs : 44.1 kHz

### Input / Output terminals

USB terminal	
B type .....	1 set
MASTER OUT output terminal	
RCA pin jacks .....	1 set
PHONES output terminal	
Stereo phone jack (Ø 6.3 mm) .....	1 set
Stereo mini phone jack (Ø 3.5 mm).....	1 set
MIC input terminal	
Phone jack (Ø 6.3 mm).....	1 set

For improvement purposes, specifications and design of this unit and the included software are subject to change without notice.

### 3. BASIC ITEMS FOR SERVICE

#### 3.1 CHECK POINTS AFTER SERVICING

##### A Items to be checked after servicing

To keep the product quality after servicing, confirm recommended check points shown below.

No.	Procedures	Check points
1	Confirm that the customer complaint has been resolved. If the problem pointed out by the customer occurs with a specific source or operation, such as PC input, AUX/MIC input, Fader, or Volume, input that specific source then perform that specific operation for checking.	The customer complain must not be reappeared. Audio and operations must be normal.
2	Confirmation of operation of operating elements Enter Service mode.	There must be no errors in operations of each button, Rotary selector, Volume, Fader, Slider and JOG.
3	Check the analog audio output. Connect this unit with a PC with the DJ application (Virtual DJ LE) installed, via USB, then operate the DJ application (Virtual DJ LE).	There must be no errors, such as noise, in audio signals and operations of the MASTER/HEADPHONES outputs.
4	Check the analog audio input. Input an audio signal via AUX/MIC.	Audio and operations must be normal.
5	Check the appearance of the product.	No scratches or dirt on its appearance after receiving it for service.

See the table below for the items to be checked regarding audio.

Item to be checked regarding audio	
C	Distortion
	Noise
	Volume too low
	Volume too high
	Volume fluctuating
	Sound interrupted

E

F

## 5.2 TROUBLESHOOTING

### [1] Power failure

#### CHECK Power Line

Step 1: JK501 Pin 1\_5 V (waveform 1-1), CN502 Pin 4\_6.5 V (waveform 1-2), CN502 Pin 2\_-6.5 V (waveform 1-3), C17 + side\_3.3 V (waveform 1-4)

### [2] No sound input/output from USB

#### CHECK Digital Audio Signal Line

Step 1: IC501 Pin 44\_MCLKO (SCK)(waveform 2-1), IC501 Pin 38 CDATI (SDO2)(waveform 2-2),  
IC501 Pin 36 CDATO (SDO1)(waveform 2-3), IC501 Pin 35 CSYNC (LRCK)(waveform 2-4),  
IC501 Pin 34 CSCLK (BCK)(waveform 2-5)

Step 2: IC200 Pin 1 BCK (waveform 2-6), IC200 Pin 2 SDO1 (waveform 2-7), IC200 Pin 3 LRCK (waveform 2-8),  
IC200 Pin 16 SCK (waveform 2-9)

Step 3: IC300 Pin 16 SCK (waveform 2-10), IC300 Pin 1 BCK (waveform 2-11), IC300 Pin 2 SDO1 (waveform 2-12),  
IC300 Pin 3 LRCK (waveform 2-13)

A

### [3] No sound input from MIC

#### CHECK Analog Audio Signal Line

Step 1: JK101 INPUT (waveform 3-1)

Step 2: MASTER OUT (waveform 3-2)

C

#### CHECK Power Line

Step 3: IC100/101/202 Pin 8\_6.5 V (waveform 3-3), IC100/101/202 Pin 4\_-6.5 V (waveform 3-4)

C

### [4] No sound output from MASTER

#### CHECK Power Line

Step 1: IC201/202 Pin 8\_6.5 V (waveform 4-1), IC201/202 Pin 4\_-6.5 V (waveform 4-2)

#### CHECK Digital Audio Signal Line

Step 2: IC200 Pin 1 BCK (waveform 4-3), IC200 Pin 2 SDO1 (waveform 4-4), IC200 Pin 3 LRCK (waveform 4-5),  
IC200 Pin 16 SCK (waveform 4-6)

D

Step 3: IC200 Pin 13 MD (waveform 4-7), IC200 Pin 14 MC (waveform 4-8), IC200 Pin 15 ML1 (waveform 4-9)

#### CHECK Analog Audio Signal Line

Step 4: IC201 Pin 7/1 (waveform 4-10), IC202 Pin 7/1 (waveform 4-10)

D

### [5] Noise sound output from MASTER

#### CHECK Power Line

Step 1: IC201/202 Pin 8\_6.5 V (waveform 4-1), IC201/202 Pin 4\_-6.5 V (waveform 4-2)

E

#### CHECK Digital Audio Signal Line

Step 2: IC200 Pin 1 BCK (waveform 5-1), IC200 Pin 2 SDO1 (waveform 5-2), IC200 Pin 3 LRCK (waveform 5-3),  
IC200 Pin 16 SCK (waveform 5-4)

Step 3: IC200 Pin 13 MD (waveform 5-5), IC200 Pin 14 MC (waveform 5-6), IC200 Pin 15 ML1 (waveform 5-7)

#### CHECK Analog Audio Signal Line

Step 4: IC201 Pin 7/1 (waveform 5-8), IC202 Pin 7/1 (waveform 5-8)

Step 5: CN501 Pin 1/3 (waveform 5-9)

F

## A [6] No sound output from PHONES

### CHECK Power Line

Step 1: IC301 Pin 8\_-6.5 V (waveform 6-1), IC301 Pin 4\_-6.5 V (waveform 6-2)

Step 2: IC302 Pin 2/9 3.3 V (waveform 6-3)

### CHECK Digital Audio Signal Line

Step 3: IC300 Pin 1 BCK (waveform 6-4), IC300 Pin 2 SDO1 (waveform 6-5), IC300 Pin 3 LRCK (waveform 6-6),  
IC300 Pin 16 SCK (waveform 6-7)

Step 4: IC300 Pin 13 MD (waveform 6-8), IC300 Pin 14 MC (waveform 6-9), IC300 Pin 15 ML1 (waveform 6-10)

### CHECK Analog Audio Signal Line

B Step 5: IC302 Pin 8 (waveform 6-11)

## [7] Noise sound output from PHONES

### CHECK Power Line

Step 1: IC301 Pin 8\_-6.5 V (waveform 7-1), IC301 Pin 4\_-6.5 V (waveform 7-2)

Step 2: IC302 Pin 2/9 3.3 V (waveform 7-3)

### CHECK Digital Audio Signal Line

Step 3: IC300 Pin 1 BCK (waveform 7-4), IC300 Pin 2 SDO1 (waveform 7-5), IC300 Pin 3 LRCK (waveform 7-6),  
IC300 Pin 16 SCK (waveform 7-7)

C Step 4: IC300 Pin 13 MD (waveform 7-8), IC300 Pin 14 MC (waveform 7-9), IC300 Pin 15 ML1 (waveform 7-10)

### CHECK Analog Audio Signal Line

Step 5: IC302 Pin 8 (waveform 7-11)

Step 6: JK301/302 Connector (waveform 7-12)

## [8] Channel level indicator doesn't light up

### CHECK Power Line

Step 1: JK501 Pin 1\_5 V (waveform 8-1), CN502 Pin 4\_6.5 V (waveform 8-2), CN502 Pin 2\_-6.5 V (waveform 8-3),  
C17 + side\_3.3 V (waveform 8-4), IC607/608 Pin 16\_5 V (waveform 8-5)

D

### CHECK Digital Control Signal

Step 2: IC607/608 Pin 11 SHCP (waveform 8-6), IC607/608 Pin 12 SHCP (waveform 8-7),  
IC607/608 Pin 13 OE (waveform 8-8)

## [9] Each operation knob doesn't work

### CHECK Power Line

Step 1: VR Power Voltage 5 V (waveform 9-1)

E

### CHECK Digital Control Signal

Step 2: IC600 Pin 68 SDA Waveform (waveform 9-2)

## [10] Each operation doesn't linked with PC

### CHECK Digital Control Signal

Step 1: POWER ON SDA Waveform (waveform 10-1)

F

## 5.3 OPERATION CHECK WITH VIRTUAL DJ

### [Preparations]

Install VIRTUAL DJ LE (DJ software) on the PC. For details on installation, refer to the operation manual of the unit. If the OS of the PC is Windows, the driver software for outputting audio from the PC must be installed beforehand. The requirements of a PC on which VIRTUAL DJ LE can be installed are as shown below.

#### Minimum operating environment

Supported operating systems	CPU and required memory
Mac OS X 10.5.x	Intel® processor 1 GB or more of RAM
Windows® XP Home Edition/ Professional (SP3 or later)	Intel® Pentium® 4 or AMD Athlon™ XP processor 512 MB or more of RAM
<b>Others</b>	
Hard disk	Free space of 50 MB or greater
Optical drive	Optical disc drive on which the CD-ROM can be read
USB port	A USB 2.0 port is required to connect the computer with this unit.
Display resolution	Resolution of 1 024 x 768 or greater

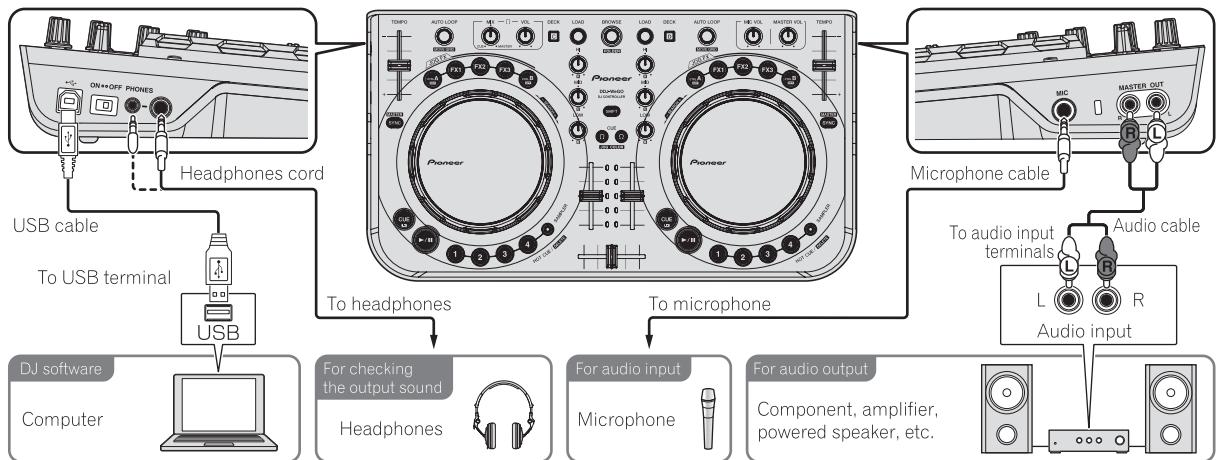

#### Recommended operating environment

Supported operating systems	CPU and required memory
Mac OS X 10.6.x	Intel® processor 2 GB or more of RAM
Windows® 7 Professional	32-bit version Intel® Core™ 2 or AMD Athlon™ X2 processor 1 GB or more of RAM
<b>Others</b>	
Hard disk	Free space of 200 MB or greater
Display resolution	Resolution of 1 280 x 1 024 or greater (Windows) Resolution of 1 440 x 900 or greater (Mac)

The conditions below must be satisfied in order to conduct video mixing.

- Mac
  - ATI™ or NVIDIA® video chipset with 256 MB of dedicated DDR3 RAM
  - Video card must support dual-screen output.
- Windows
  - ATI™ or NVIDIA® video card with 256 MB of dedicated DDR3 RAM
  - Video card must support dual-screen output.

### [Connections]

## A [Startup of the System]

### • Starting up the DDJ-WEGO

1. Connect this unit and a PC, using a USB cable.
2. Start up the connected PC.
3. Slide the ON/OFF switch of this unit to ON to turn it on.

### • Starting up VIRTUAL DJ LE

#### (Windows)

1. From the Start menu of the Windows, select All Programs, VIRTUAL DJ LE, then VirtualDJ LE (DDJ-WeGO). When VIRTUAL DJ LE is started for the first time, the serial number input window will be displayed.
2. After the VIRTUAL DJ LE window is displayed, click on CONFIG located in the upper right portion of the window. The Settings window is displayed. Select the Sound Setup tab and set the following items in the order described below.
  - ① [Inputs]: Select NONE.
  - ② [Sound card]: Select ASIO DRIVER and Pioneer DDJ\_WeGO ASIO.
  - ③ [Outputs]: Select HEADPHONE and [Master: Chan 1&2/Headphones: Chan 3&4].
3. Click on Apply then OK.

#### (Macintosh)

1. With the Finder, open the Applications folder then double-click on the VIRTUAL DJ LE icon. (Enter the serial number in the same way as that for Windows.)
2. After the VIRTUAL DJ LE is displayed, click on CONFIG located in the upper left portion of the window. The Settings window is displayed. Select the Sound Setup tab and set the following items in the order described below.
  - ① [Inputs]: Select NONE.
  - ② [Sound card]: Select 4-OUT CARD and Pioneer DDJ\_WeGO.
  - ③ [Outputs]: Select HEADPHONE and [Master: Chan 1&2/Headphones: Chan 3&4].
3. Click on Apply then OK.

## [Loading and Playing a Track (A part)]

1. While holding the SHIFT button pressed, turn the rotary selector to select a folder or an item.
2. After releasing the SHIFT button, turn the rotary selector to select a track.
3. Press the LOAD button to load the selected track onto the deck.
4. Play the track by pressing the ▶/■ button.

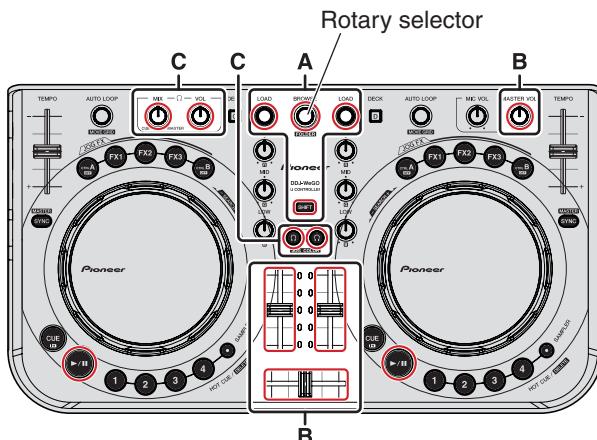

## D [Outputting Audio]

### MASTER OUT OUTPUT (B part)

1. Adjust the level of the audio signal output from each deck, using the channel fader.
2. For switching the decks from which the audio signal is output, use the cross fader.
3. Adjust the audio level from the speakers, using the MASTER VOL control, in order to confirm that the audio signal is output without a problem.

### Headphones OUTPUT (C part)

1. Connect the headphones to PHONES terminal.
2. Press the CUE (Headphones CUE) button of the deck which you want to monitor.
4. Adjust the audio level, using the HEADPHONE [VOL] control, in order to confirm that the audio signal is output without a problem.

## 6. SERVICE MODE

### Description of Service Modes

The Following service modes are provided for this unit:

**① FIRMWARE VERSION (MAIN UCOM) and LAST MEMORY CONFIRMATION MODE**

The mode for confirmation of the firmware version, checking on a setting state of the illuminations mode and jog touch sensitivity.

**② BUTTON INPUT AND DISPLAY FUNCTION CONFIRMATION MODE**

The mode which confirms whether each button, input of the JOG dial and display are normal

**③ JOG DIAL ROTATION TIME MEASUREMENT MODE**

The mode which measures rotary decline time of the jog dial

**④ FACTORY RESET MODE**

The mode which returns the item where user setting is possible for the setting of the factory shipping state

**⑤ VOLUME VALUE FLUCTUATION CONFIRMATION MODE**

The mode which measures fluctuation of voltage (A/D conversion value) that you acquired from each fader and rotary volume

\* These modes will not do TUSB communication.

A

B

C

D

E

F

## 6.1 FIRMWARE VERSION (MAIN UCOM) and LAST MEMORY CONFIRMATION MODE

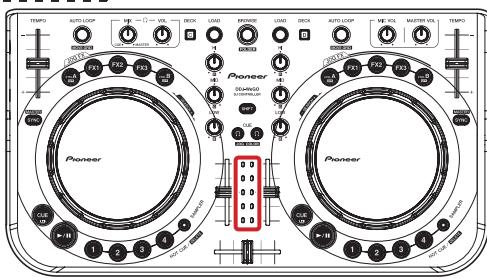

- A To enter this mode, while simultaneously holding the DECK C and DECK D buttons pressed, set the Power switch of the unit to ON. (Hold the two buttons pressed until the opening display terminates.)

The version number of the firmware (MAIN UCOM) will be indicated with LED-lighting patterns that are switched every 2 seconds in integral part and decimal fraction part. In the blocks that are indicated with the red frames in the figures, the number of lit LEDs indicates the corresponding number.

### Confirming the Firmware Version

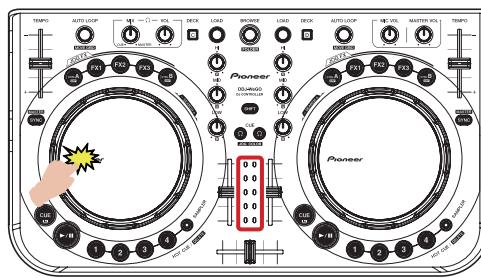

- ① Integral part of the version number  
(LEDs on DECK C and D turn off)

**X.XX**

2 sec ↓

**Confirming the transmission interval (do send to every any msec?) of sending MIDI IN for the jog dial turning memorised in FlashRom.**

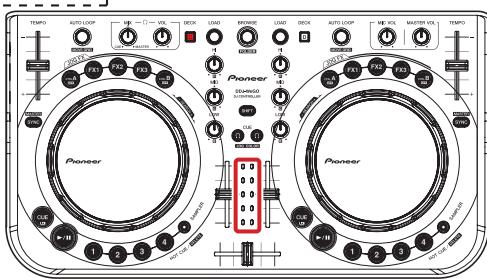

Left jog dial is pressed.

The version display ends.  
The display of the MIDI transmission cycle of the jog dial starts.

- ② The first place of decimal fraction part of the version number  
(LED on DECK C lit)

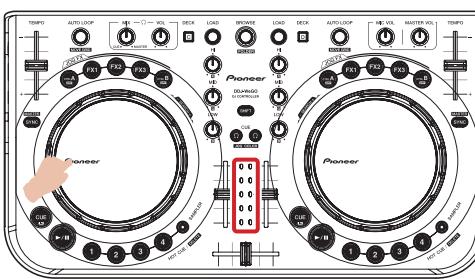

**X.XX**

2 sec ↓

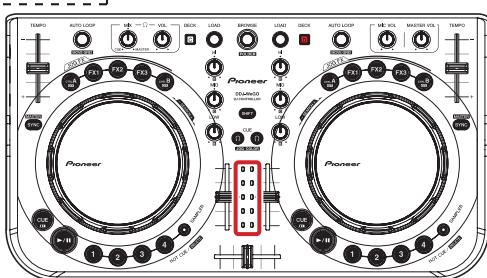

Release your finger,  
jog dial Touch ends.

The display of the MIDI transmission cycle of the jog dial ends.  
The version display starts.

- ③ The second place of decimal fraction part of the version number  
(LED on DECK D lit)

**X.XX**

[Numerics expressed with the number of lit LEDs]

## Confirmation of Last Memory

Apart from the firmware-version indication, the current settings of the user settable items (Color of the jog dial's illumination, Sensitivity of the jog dial's touch sensor, and Illuminations mode) are indicated with other LEDs.

Mode	Point	Mode setting state	LED display
Color of the jog dial's illumination	DECK A		While the DECK A–D buttons are lit alternately at intervals of 2 sec., the LEDs of the jog dial will be lit in the color of illumination corresponding to the setting for each deck.
	DECK B		
	DECK C		
	DECK D		
Sensitivity of the jog dial's touch sensor	[HOT CUE1] button on the left deck	Sensitivity: -4 (low)	A [HOT CUE] button or the [SAMPLER] buttons will light, corresponding to the set sensitivity.
	[HOT CUE2] button on the left deck	Sensitivity: -3	
	[HOT CUE3] button on the left deck	Sensitivity: -2	
	[HOT CUE4] button on the left deck	Sensitivity: -1	
	[SAMPLER] button on the both deck	Sensitivity: 0	
	[HOT CUE1] button on the right deck	Sensitivity: +1	
	[HOT CUE2] button on the right deck	Sensitivity: +2	
	[HOT CUE3] button on the right deck	Sensitivity: +3	
	[HOT CUE4] button on the right deck	Sensitivity: +4 (high)

## 6.2 BUTTON INPUT and DISPLAY FUNCTION CONFIRMATION MODE

### A All LED Turn On Mode:

Hold the [LOAD] and [DECK D] button and power on till all LED turn on, then release.

B

### Confirmation of Input to Each Element and Display Function

- To enter this mode, while holding the SYNC and CUE buttons on the Deck A/C side pressed, set the Power switch to ON. (Enter this mode, when opening display is terminated.)

In this mode, you can check if pressing each of button or turning of the jog dial is properly input and indications are also properly displayed. The indication corresponding to a pressed button is lit only while the button is held pressed.

All the button have to be off except pressed button when all the buttons are on by Browse button.

C	Part	Operation	Device	LED display	DECK	
	DECK C	BUTTON	DECK C		1	
	DECK D	BUTTON	DECK D		2

	SHIFT	BUTTON	All LED of Level meter	1/2

### [Indications by the VOL control]

The volume level is indicated in 8 steps from minimum to maximum.

Brightness will be adjusted as standard brightens. At the minimum volume, LEDs 12, 13, and 14 are lit. The lighting LEDs shift as the volume is increased, and LEDs 3, 4, and 5 are lit at the maximum volume.

Brightness will be adjusted as standard brightens.

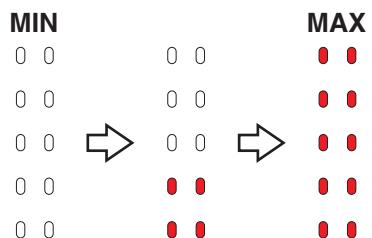

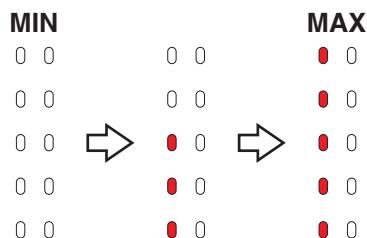

### A [Indications by the FADER control]

Indicate 10 steps as divided 10 between Min and Max.  
All the LED off is MIN, All on is MAX on each Deck.

In case of Cross Fader, All the LED off is MIN, All on is MAX on each Deck.

ex) In case of left Deck

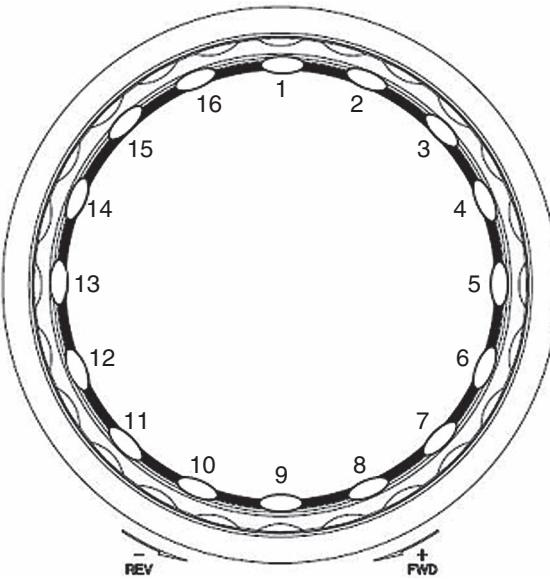

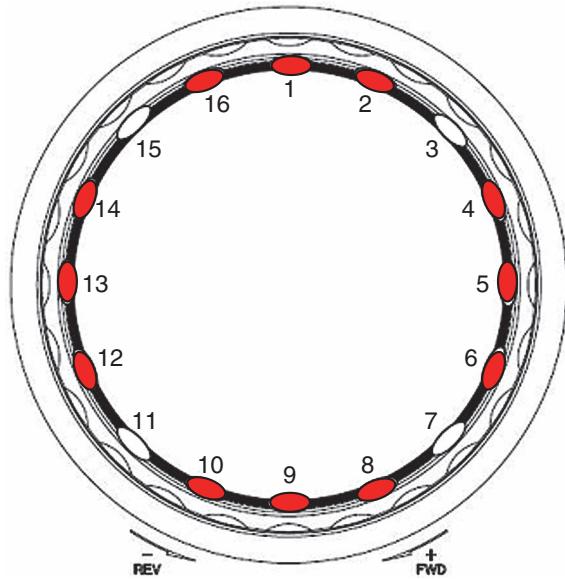

B

### B [Indications by the jog dial]

When touched jog dial, all LED on jog dial turn on.

LED of jog dial doesn't turn on in case of turning jog dial.

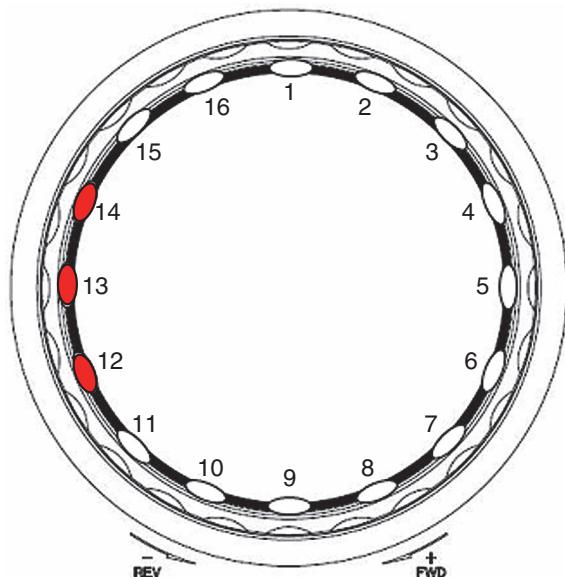

C

D

When jog dial is turned with touched jog dial platter, 3LED of jog dial turns.

E

F

## **6.3 JOG DIAL ROTATION TIME MEASUREMENT MODE**

This is a mode measuring jog dial rotation decline time of this unit.

When there was designation of the rotary malfunction of the jog dial from a customer; decline for a diagnosis. The specified range is  $100 \pm 40$  msec.

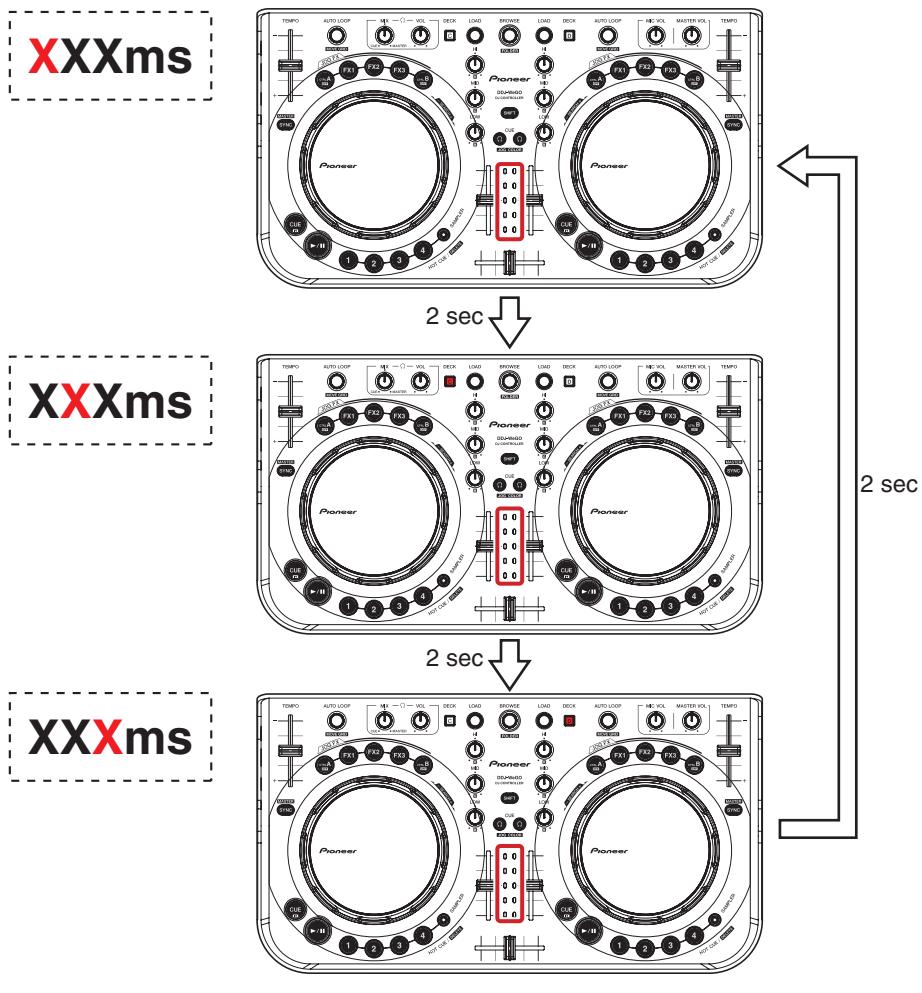

## 1. Jog dial Rotation Time Measurement Mode

To enter this mode, while holding the LOAD and CTRL B buttons on the Deck A/C side pressed, set the Power switch to ON. During this mode, the HeadPhone CUE LEDs on both sides are lit.  
(Enter to this mode when Opening display is terminated.)

(Enter to this mode when OpenHg display is terminated.)

## 2. How to Measure

- ① You spin Jog dial more than  $33 \times 7 = 231$  rpm.
    - \*1: In case of less than 231 rpm, the controller blinks all jog dial LED at 3 times.  
blinking cycle: 1 sec
    - \*2: You correspond both of clockwise and counter clockwise.
  - ② The controller measure T1 below.
    - \*T1: The time that Jog rotation speed slow down from 100 rpm to 50 rpm.

[Numerics expressed with the number of lit LEDs]

## 6.4 FACTORY RESET MODE

A To enter this mode, while simultaneously holding the Sampler and HOT CUE 1 buttons on the Deck A/C side pressed, set the Power switch of the unit to ON. (Enter this mode when opening display terminated.) Memorize Table 1 items when enter this mode.

During Factory Reset mode, the SYNC LEDs on both sides are lit. When you exit this mode, the LEDs go dark.

**Note:** As the execution time required for Factory Reset is extremely short, in effect, the SYNC LEDs appear to stay unlit.

### 1. Initial Settings

1	Color of the jog dial's illumination	No color settings for any deck
2	Sensitivity of the jog dial's touch sensor	Sensitivity: 0
3	Jog dial's MIDI message sending interval	3 msec
B 4	Illuminations mode	Active

Table 1

JOG LED color is Hanpin matter when the controller is launched after FACTORY RESET.

### 2. For the color valuation of JOG RGB LED

The color of the RGB LEDs of the jog dials must be set according to the color of each controller at the factory.

Press a setting button shown in the table below, according to the color of the cabinet of the controller. The colors of the RGB LEDs of the jog dials for all decks (A/B/C/D) will be set to their standard colors (colors corresponding to the pressed setting buttons).

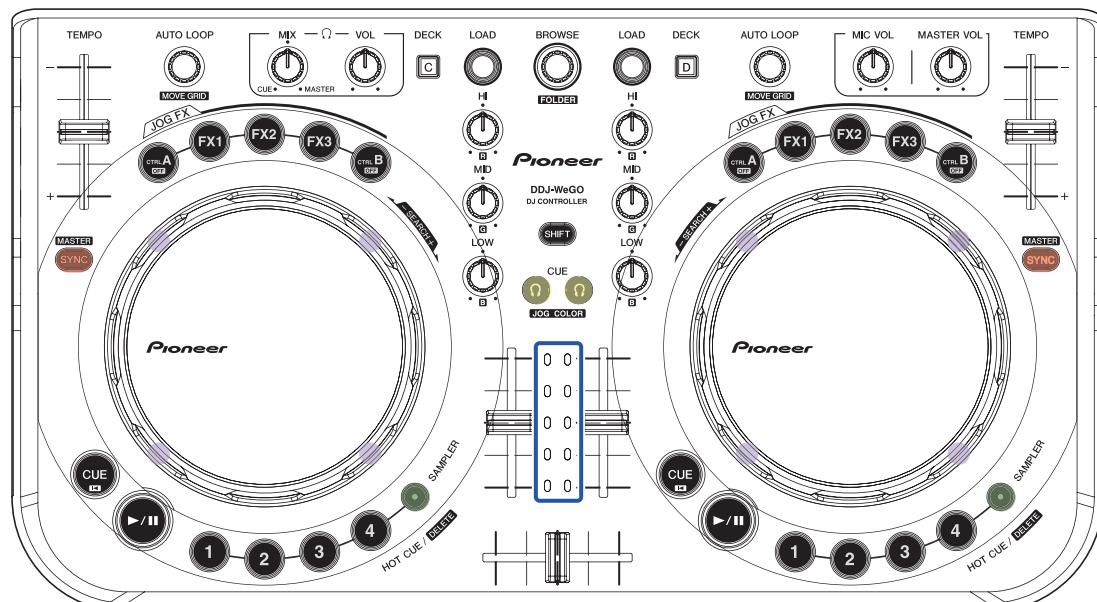

The data for color change will be stored in memory immediately before the controller is turned off.

**Note:** If this setting is not performed, the color of the RGB LEDs of the jog dials for all the decks will be set to blue when the unit is turned ON for the next time.

Color Variation on Controller	Default Color (LED)	Setting Button
Black (DDJ-WEGO-K)	Blue	CTRL A
Red (DDJ-WEGO-R)	Orange	FX1
Green (DDJ-WEGO-G)	Emerald green	FX2
Violet (DDJ-WEGO-V)	Violet	FX3
White (DDJ-WEGO-W)	Frosty white	CTRL B

Table 2

ex) If Press the FX3, JOG RGB LED will be changed as below.

## 6.5 VOLUME VALUE FLUCTUATION CONFIRMATION MODE

You can enter this mode by turn on power together with press "HOT CUE 2" + "HOT CUE 3" buttons at left deck.  
(Enter this mode after opening illumination is finished.)

### [Use of this mode during repair]

- For failure judgment of the rotary VRs

As a guide, amplitude values higher than +4 or lower than -4 may be judged as failure.

The VRs can be set to any position during measurement. Possible symptoms are shown below.

- The volume changes arbitrarily.
- Interrupted sound leakage occurs even if the volume is decreased to the minimum at the Master or Booth Monitor.
- The MIDI signal is output even if the corresponding VR is not operated.

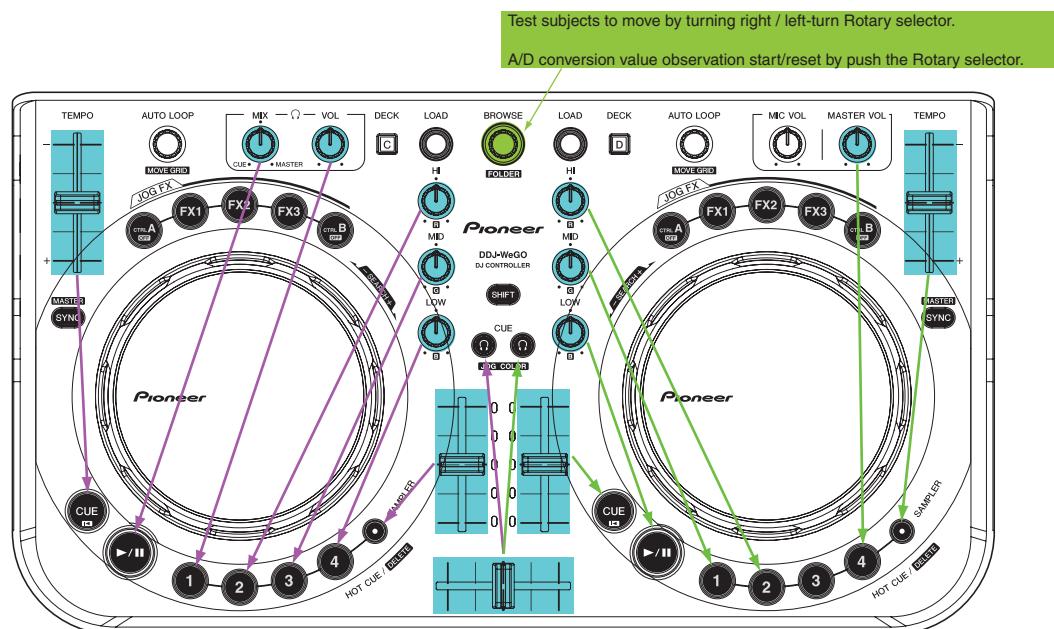

- For operation check of a rotary VR after replacement

### [Test Overview]

Will be tested fluctuation of voltage (A/D conversion value) which is made each Fader and Rotary volume by channel level indicator.

### [knobs under test operation]

knobs under test operation are filled blue as below.

### [Test detail]

- Choose the test subject by turn left and right Rotary selector.
- You can see what knob is selected by turn on and off LED on Both CUE, ▶/II (PLAY/PAUSE), HOT CUE 1, 2, 3, 4, SAMPLER and HEADPHONES CUE.

Number of Rotary selector click	Knob	Turn On LED
0	Left deck, TEMPO slider	Left deck, CUE LED
1	Left deck, HEADPHONES MIX control	Left deck, ▶/II (PLAY/PAUSE) LED
2	Left deck, HEADPHONES VOL control	Left deck, HOT CUE 1 LED
3	Left deck, EQ (HI) control	Left deck, HOT CUE 2 LED
4	Left deck, EQ (MID) control	Left deck, HOT CUE 3 LED
5	Left deck, EQ (LOW) control	Left deck, HOT CUE 4 LED
6	Left deck, Channel fader	Left deck, SAMPLER LED
7	Right deck, Channel fader	Right deck, CUE LED
8	Right deck, EQ (LOW) control	Right deck, ▶/II (PLAY/PAUSE) LED
9	Right deck, EQ (MID) control	Right deck, HOT CUE 1 LED
10	Right deck, EQ (HI) control	Right deck, HOT CUE 2 LED
12	Right deck, MASTER VOL control	Right deck, HOT CUE 4 LED
13	Right deck, TEMPO slider	Right deck, SAMPLER LED
14	Crossfader	Left, Right deck, HEADPHONES CUE LED

- A ③ When targeted knob is decided, push the Rotary selector and start observation of A/D conversion value.  
Get the A / D conversion value immediately after the start. It will be reference value.  
\* A / D conversion value to be monitored is Raw data.

- ④ Start monitoring and later to monitor the A / D conversion value, do the following actions depending on its value.

1	+1 from the reference value A / D conversion value	The 1st to be lit from the bottom of the right Channel Level Indicator
2	+2 from the reference value A / D conversion value	The 1st - 2nd to be lit from the bottom of the right Channel Level Indicator
3	+3 from the reference value A / D conversion value	The 1st - 3rd to be lit from the bottom of the right Channel Level Indicator
4	+4 from the reference value A / D conversion value	The 1st - 4th to be lit from the bottom of the right Channel Level Indicator
5	over +5 From the reference value A / D conversion value	The 1st - 5th to be lit from the bottom of the right Channel Level Indicator
6	-1 From the reference value A / D conversion value	The 5th is lit from the bottom of the left Channel Level Indicator
7	-2 From the reference value A / D conversion value	The 4th - 5th is lit from the bottom of the left Channel Level Indicator
8	-3 From the reference value A / D conversion value	The 3rd - 5th is lit from the bottom of the left Channel Level Indicator
9	-4 From the reference value A / D conversion value	The 2nd - 5th is lit from the bottom of the left Channel Level Indicator
10	less than -5 From the reference value A / D conversion value	The 1st - 5th is lit from the bottom of the left Channel Level Indicator

\* Display at the same time both fall / rise direction from the reference value of the conversion value A/D

1	2	3	4	5	6	7	8	9	10
0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0
0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0
0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0
0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0
0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0	0 0

\* Keep the lighting position at the time of maximum fluctuation of each of the positive & negative direction

- ⑤ By pushing the Rotary selector while monitoring the conversion value A / D, it is possible to reset the state of the fluctuations of the past.

#### Ex.)

1. Turn the left deck EQ (HI) control to the position you want to measure.

6. More time has elapsed, Channel level indicator is lit as follows: become the value 764 of the A / D.

0 0  
0 0  
0 0  
0 0  
0 0

2. Turned right 3 clicks Rotary selector.  
→ HOT CUE 2 of the left deck is lit.

3. Start A/D conversion value monitoring to push Rotary selector.  
If A/D value of push the Rotary selector is 760, To monitor the amount of change in the value of A / D as a reference value 760.

4. After a while, Channel level indicator is lit as follows:  
become the value 763 of the A / D.

0 0  
0 0  
0 0  
0 0  
0 0

5. More time has elapsed, To maintain the above display 762 even though the value of the A / D.

7. More time has elapsed, Channel level indicator is lit as follows: become the value 758 of the A / D.

0 0  
0 0  
0 0  
0 0  
0 0

8. More time has elapsed, To maintain the above display 759 even though the value of the A / D.

9. More time has elapsed, Channel level indicator is lit as follows: become the value 757 of the A / D.

0 0  
0 0  
0 0  
0 0  
0 0

10. Off all the Channel level indicator when you push the Rotary selector, and this value will be new reference value.

# 7. DISASSEMBLY

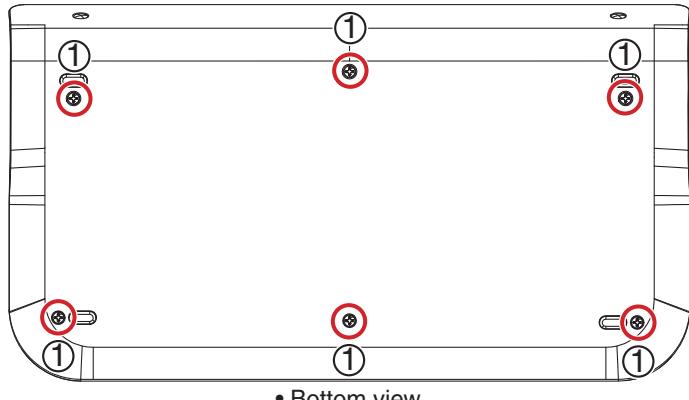

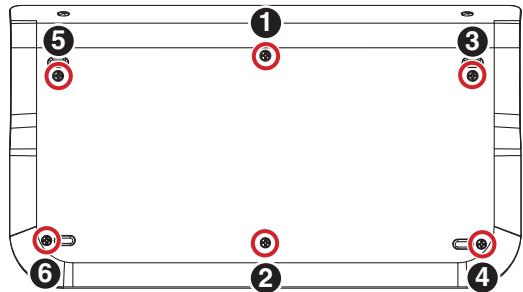

**Note:** Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

## Disassembly

### [1] Chassis Section

- (1) Remove the chassis section by removing the six screws.  
(K, R, V: 602-PTB3010-674B)  
(W, G: 602-PTB3010-674Z)

#### Screw tightening order

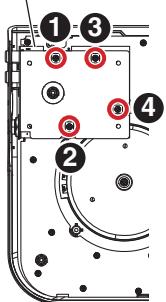

### [2] MASTER and IO PCB Assemblies

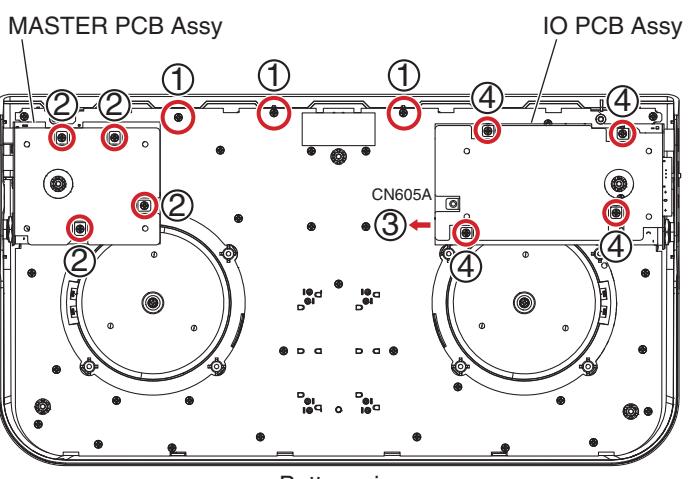

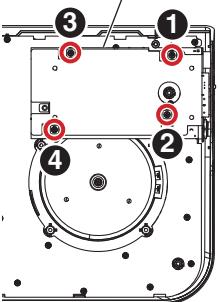

- (1) Release the jumper wire from the three locking cable clip.
- (2) Remove the MASTER PCB Assy with plate by removing the four screws.  
(602-SL24F-099)
- (3) Disconnect the one flexible cable.  
(CN605A)
- (2) Remove the IO PCB Assy with plate by removing the four screws.  
(602-SL24F-099)

#### Screw tightening order

MASTER PCB Assy

IO PCB Assy

A

B

C

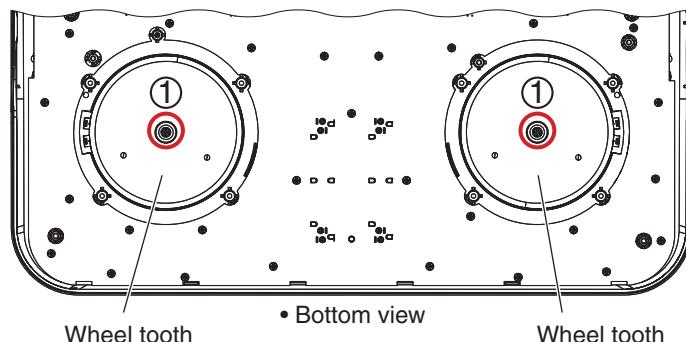

D

E

F

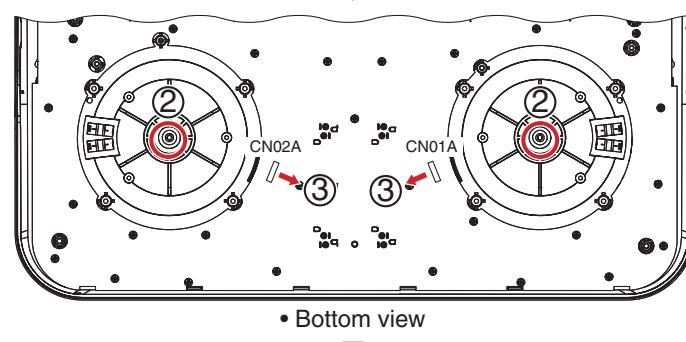

### A [3] WHEEL (L) and (R) PCB Assemblies

- (1) Remove the two wheel teeth by removing the two screws and four washers.  
(602-STR885-354)

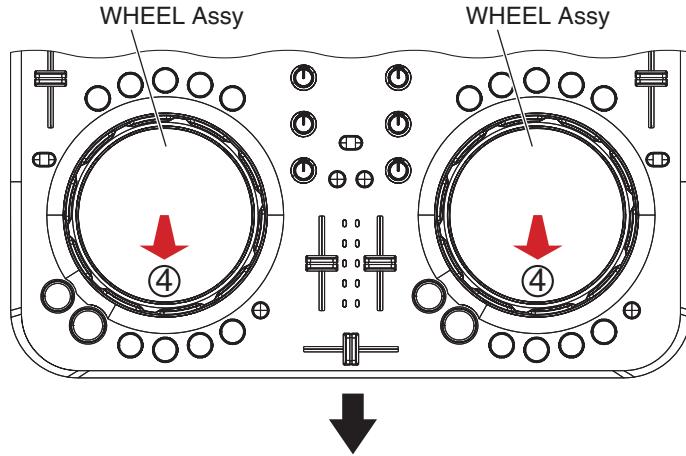

B

- (2) Remove the two washers and two E rings.  
(3) Disconnect the two flexible cables.  
(CN01A, CN02A)

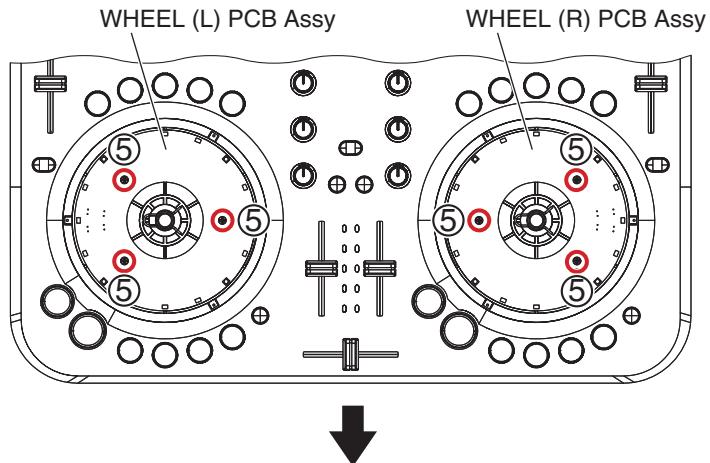

C

- (4) Remove the two WHEEL Assemblies.

- E (5) Remove the WHEEL (L) and (R) PCB Assemblies by removing the six screws.  
(602-SL24F-099)

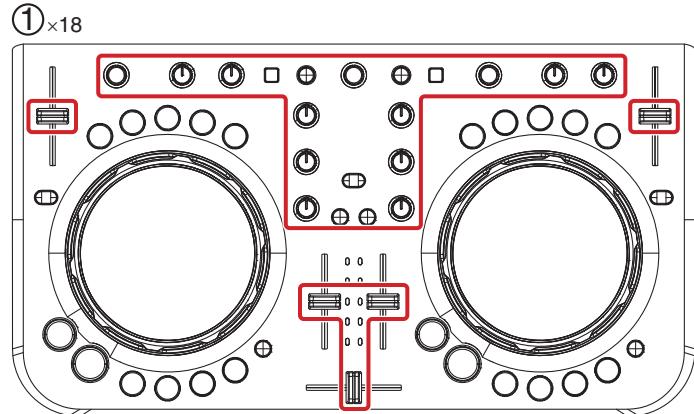

F

## [4] CONTROL PCB Assy

### Note:

When you remove CONTROL PCB Assy, it is not necessary to remove a WHEEL section.

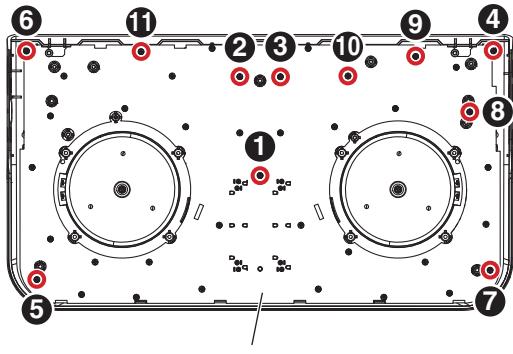

- (1) Remove the all knobs.

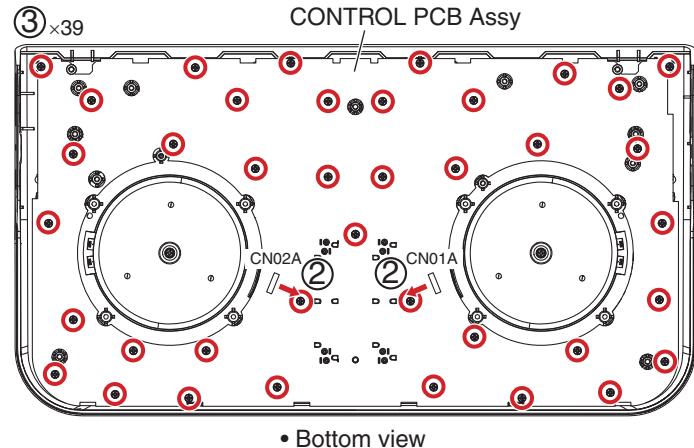

- (2) Disconnect the two flexible cables.  
(CN01A, CN02A)
- (3) Remove the CONTROL PCB Assy by removing the 39 screws.  
(602-SL24F-099)

### Screw tightening order

The other screws are random order.

## A The Application Position of Adhesive and Grease

# 8. EACH SETTING AND ADJUSTMENT

## 8.1 NECESSARY ITEMS TO BE NOTED

After repairing, be sure to check the version of the firmware, and if it is not the latest one, update to the latest version. Perform the each item when the following parts are replaced.

- IC storing firmware and PCB Assy  
IC600 (CONTROL IC), IC618 (MIDI IC),  
CONTROL PCB Assy
  - When replaced WHEEL Assy
- ↔ ↔ ↔
- Confirmation of the version of the firmware
  - Updating to the latest version of the firmware
  - Confirmation of the specified value by the mode which measures rotary decline time of the jog dial

## 8.2 UPDATING OF THE FIRMWARE

### Preparations

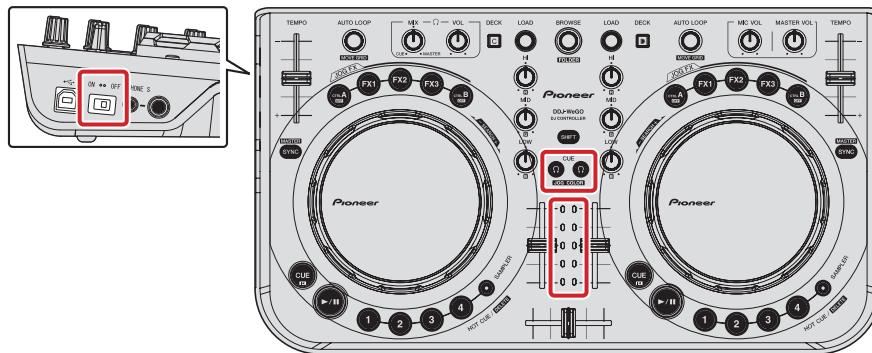

Download the latest Java from the following pages, and install it in a PC for update.

<http://www.java.com/ja/>

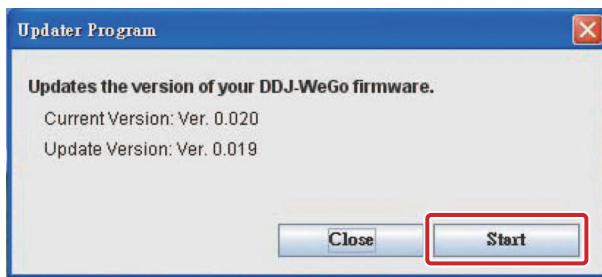

Update program software name: DDJ-WeGO\_V1xx.jar

### Procedures

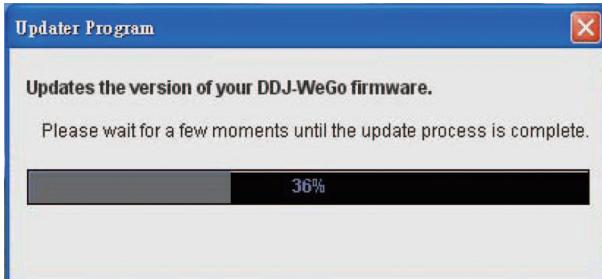

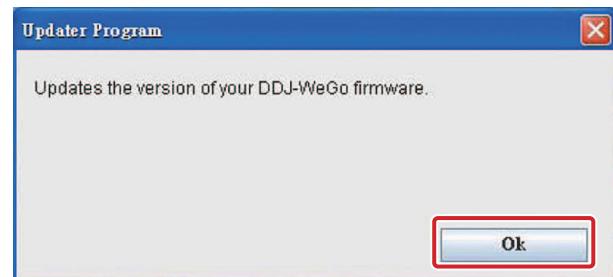

- ① Hold the JOG COLOR CUE button and Power switch at the same time till all Channel level indicator turn on.

- ② Click the Updater Program software, the information with PC.
- ③ Click "Start" to update procedure, the information with PC.

- ④ After upgrading and finishing automatically, the information with PC, Click "OK", finish the Firmware update.

- \* When update fails, all level indicators blink when a power is turned on.  
In that case, please update it again.

## 8.3 ITEMS FOR WHICH USER SETTINGS ARE AVAILABLE

A This unit is provided with user settable items, as shown below.

Although no serious operational problems occur even if data for such user settable items are cleared during repair, it is recommended that you take note of those settings before starting repair.

Use the Check Sheet shown below, to which you can transcribe the settings.

For details on how to confirm the settings, see "6.1 FIRMWARE VERSION (MAIN UCOM) and LAST MEMORY CONFIRMATION MODE."

B For details on the setting methods, refer to "Changing the color of the jog dial's illumination," "Adjusting the jog dial's MIDI message sending interval," and "Adjusting the sensitivity of the jog dial's touch sensor" in the operation instructions.

	Item for Which User's Setting is Available	Setting Value (The factory default settings are indicated in bold.)	Part Name	Content to be Stored
B	Color of the jog dial's illumination	<b>Blue</b> <input checked="" type="checkbox"/> (DDJ-WEGO-K) <b>Frosty white</b> <input type="checkbox"/> (DDJ-WEGO-W) <b>Orange</b> <input checked="" type="checkbox"/> (DDJ-WEGO-R) <b>Emerald green</b> <input checked="" type="checkbox"/> (DDJ-WEGO-G) <b>Violet</b> <input checked="" type="checkbox"/> (DDJ-WEGO-V)  Other colors to pre-set Red <input checked="" type="checkbox"/> , Yellow <input checked="" type="checkbox"/> , Green <input checked="" type="checkbox"/> , Aqua <input checked="" type="checkbox"/> Free setting EQ (HI, MID, LOW) Control R G B with a knob, and can set each color freely.	CONTROL PCB ASSY (704-DDJLE-A368) [NSP] STM8S207MB Control IC (IC600)	Setting coller

## 9. EXPLODED VIEWS AND PARTS LIST

- NOTES:**
- Parts marked by “NSP” are generally unavailable because they are not in our Master Spare Parts List.
  - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - Screws adjacent to ▼ mark on product are used for disassembly.
  - For the applying amount of lubricants or glue, follow the instructions in this manual.  
(In the case of no amount instructions, apply as you think it appropriate.)

## 12. PCB PARTS LIST

**NOTES:**

- Parts marked by “NSP” are generally unavailable because they are not in our Master Spare Parts List.
- The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

- Although the cables that are directly mounted on each PCB Assy are listed individually as electrical parts of the corresponding PCB Assy in the parts list, those cables are included with each PCB Assy for service when it is supplied.
