# 1. SAFETY INFORMATION - LABEL CHECK

## OUTSIDE THE UNIT

### Additional Laser Caution

#### 1. Laser Interlock Mechanism

The position of the switch (S651) for detecting loading state is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch (S651) is not on CLMP terminal side (CLMP signal is OFF or high level).

Thus, the interlock will no longer function if the switch (S651) is deliberately set to CLMP terminal side. (low level)

The interlock also does not function in the test mode \*. Laser diode oscillation will continue, if pin 33 of CXA1782CQ (IC151) on the MOTHER BOARD ASSY is connected to GND, or pin 28 of IC351 (LDON) is connected to low level (ON), or else the terminals of Q151 are shorted to each other (fault condition).

2. When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

\* : Refer to page 20

## 2. EXPLODED VIEWS AND PARTS LIST

- NOTES: - Parts marked by 'NSP' are generally unavailable because they are not in our master spare parts list.  
 - The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.  
 - Screws adjacent to  $\blacktriangledown$  mark on product are used for disassembly.

2.2 MECHANICAL - EXPLODED VIEWS

**REMOVING AND REPLACING THE DISPLAY PCB ASSEMBLY.**

**REMOVING**

- 1 The PCB is held in place by 8 plastic welds, marked W above.
- 2 Using flat edge cutters, carefully cut the ends off the welds. BE CAREFUL NOT TO DAMAGE THE COPPER PATTERN.
- 3 Remove the PCB.

**REFITTING**

- 4 Refit the PCB to the posts.
- 5 Fix the PCB in position using BBZ30P080FZK screws.
- 6 If an alternative screw is used, it is recommended that a nylon or fibre washer be fitted before the screw.

2.3 SINGLE MECHANISM ASSY - EXPLODED VIEW

● How to install the disc table

- 1 Use nipper or other tool to cut the three sections marked (A) figure 1. Then remove the spacer.
- 2 While supporting the spindle motor shaft with the stopper, put spacer on top of the motor base (angled so it doesn't touch section (B)), and stick the disc table on top (takes about 9kg pressure). Take off the spacer.

## 5. PCB PARTS LIST

NOTES: • Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

• The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

• When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560 $\Omega$	$\rightarrow$	56 $\times$ 10 <sup>1</sup>	$\rightarrow$	561 .....	RD1/4PU	561J
47k $\Omega$	$\rightarrow$	47 $\times$ 10 <sup>3</sup>	$\rightarrow$	473 .....	RD1/4PU	473J
0.5 $\Omega$	$\rightarrow$	R50 .....			RN2H	R50K
1 $\Omega$	$\rightarrow$	1R0 .....			RS1P	1R0K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
