COMPACT DISC PLAYER

PD-4050 PD-4050-S

009713

MODEL PD-4050 AND PD-4050-S COMES IN SEVEN VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Applicable model		Power requirement	Except destination
	PD-4050	PD-4050-S		
KU	○	—	AC120V only	U.S.A.
KC	○	—	AC120V only	Canada
HEM	○	○	AC220V, 240V (switchable) *	European continent
HP	○	—	AC220V, 240V (switchable) *	Australia
SD	○	—	AC110V, 120-127V, 220V, 240V (switchable)	General market
SD/G	○	—	AC110V, 120-127V, 220V, 240V (switchable)	U.S. Military
HB	○	○	AC220V, 240V (switchable) *	United Kingdom

* Change the position of jumper of the Transformer board assembly.

- This service manual is applicable to the KU, KC, HEM, HB, HP, SD and SD/G types.
- As to the KC, HEM, HB, HP, SD and SD/G types, please refer to pages 75.
- Ce manuel d'instruction se réfère au mode de réglage en français.
- Este manual de servicio trata del método ajuste escrito en español.

1. SAFETY INFORMATION

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120 V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

ADDITIONAL LASER PRECAUTIONS

- 1. Laser Interlock Mechanism**
 The clamp switch (S102) detects the completion of the Load in operation, and the ON/OFF status of the clamp switch is in turn detected by the microcomputer. The laser diode is designed not to oscillate while the clamp switch is in OFF status. Consequently, if S102 is accidentally short-circuited, the interlock mechanism will become incapable of operation.
 Moreover, when short-circuiting occurs between Pins 4 or 5 of CXA1081S (IC 1) and GND, or between Pin 29 of CXA1081S (IC 1) and GND, or between the terminals of Q1 (a Fault Condition will occur in all three cases), the laser diode will oscillate continuously. Note that during TEST Mode (see page 36), the interlock mechanism does not operate.
- 2. While the bonnet is in opened status, if the pickup is positioned to allow direct visibility of the objective lens at the outer periphery from the outer diameter of the disc clamber (80-mm diameter), the pickup can be flooded with radiation of more than class 1 of the laser optical system during any Fault Condition in Item 1 above or during TEST Mode.**

3. PANEL FACILITIES

FRONT PANEL

POWER switch (■ OFF, ■ ON)
 Press to turn power to the unit ON and OFF.
 If there is a disc in the unit when power is turned ON, playback will begin automatically. (Timer start function)

Indicators		MIN	: Displays the playback time in minutes. (Only during manual search operation.)
REPEAT	: Lights during repeat play.	PLAY/PAUSE	
PROGRAM	: Lights after programming (after program has been memorized).	PLAY ▷	: Lights during playback.
TRACK/MIN	: Indicates current track number, and track numbers within program.	PAUSE 00	: Lights during pause mode, when playback is temporarily interrupted.

For Service Manuals Contact

 Tel:- 01844-351694 Fax:- 01844-352554
 Email:- enquiries@mauritron.co.uk

OPEN/CLOSE key 

Press when you wish to eject or load a disc. Each time the key is pressed, the tray is alternately pushed out or pulled in.

Disc Tray

This is where the disc is set. When power is switched ON and the OPEN/CLOSE key is pressed, the tray is ejected forward.

To insert the tray, press the OPEN/CLOSE key, or lightly push the tray in with your finger. During play operation, pressing the PLAY key causes the tray to be inserted automatically.

STOP/CLEAR Key 

Press to stop playback. When pressed, the player goes into stop mode and all operations stop. Press to clear a program. When pressed during stop mode, the program stored in memory is cleared.

PAUSE key 

Press to temporarily interrupt playback. When pressed again, the pause mode is cancelled and playback resumes.

PLAY key 

Press to begin playback, and to cancel the pause mode.

MANUAL SEARCH Keys

When the player is in play or pause modes, these keys are pressed to perform fast forward or fast backward operations, to allow manual searching. These operations are only carried out during the time either key is pressed.

 : Fast forward operation (If fast forward operation is performed to the end of the disc, "E" will be displayed and the player will enter pause mode.)

 : Fast backward operation (If fast backward operation is performed to the beginning of the disc, the player will enter play mode.) If these operations are performed during programmed play mode, the player will enter pause mode (or play mode) just before transferring to the next (or previous) step.

TRACK SEARCH keys

When the player is in the normal play, programmed play or pause modes, these keys are pressed to search for a desired track. Pressing either key causes the player to advance to the next track, or return to the previous track.

 : When pressed once, the disc playback advances to the beginning of the next track on the disc; when pressed continuously, the disc playback moves to the beginning of succeeding tracks on the disc. (During programmed playback, it moves to the beginning of the next programmed track.)

 : When pressed once, the disc playback returns to the beginning of the currently playing track; when pressed continuously, the disc playback moves further in reverse to the beginning of previous tracks on the disc. (During programmed playback it returns to the beginning of the previously programmed track.)

REPEAT key

Press to perform repeat playback

- If pressed during normal playback mode, all tracks on the disc will be repeatedly played back.
- If pressed during programmed playback, the programmed tracks will be repeatedly played back in the programmed order.

PROGRAM key (PROGRAM MEMORY)

Used to program a sequence of tracks.

- Press this key after selecting a desired track with the TRACK SEARCH keys. Tracks will be added to the program in the order in which they are selected.

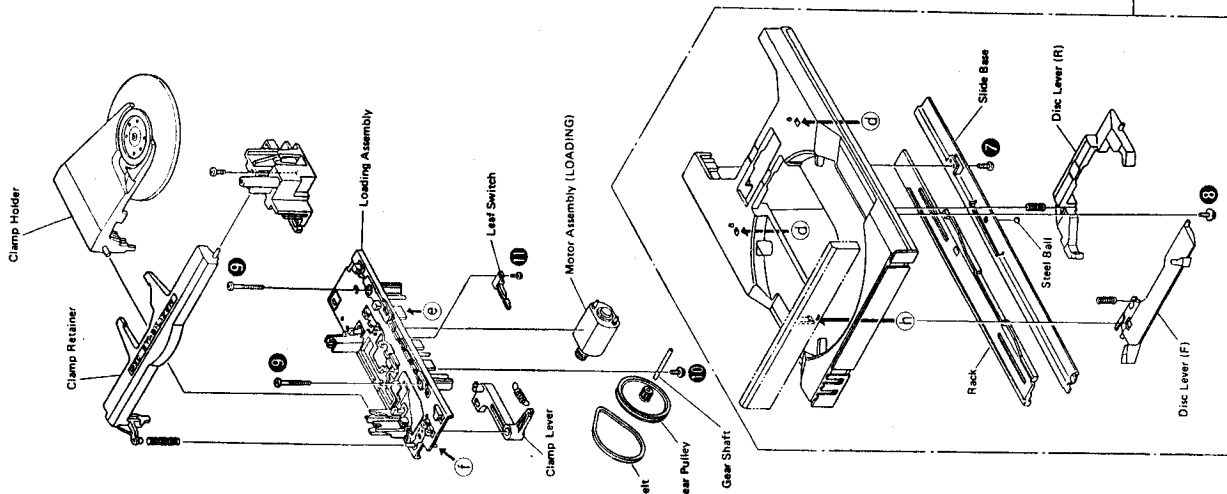

Fig. 4-2 Parts disassembly (Loading mechanism and Tray assembly section)

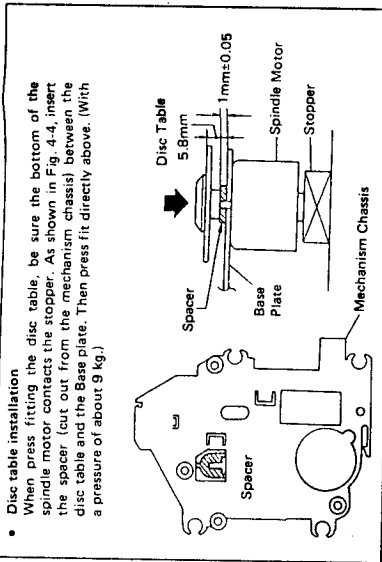

Fig. 4-4 Disc table installation

Fig. 4-3 Parts disassembly (Servo mechanism section)

Reassembly when replacing the pick-up

1. Place the carriage plate on the outer-most periphery of the mechanism chassis.
2. Place the drive spring on pin A of the carriage plate. (As shown in the figure, have it rotate clockwise.)

3. After the guide bar is put through the Pick-up, align pin A of the carriage plate with hole B of the Pick-up. Place the guide bar on top of the mechanism chassis.
4. Next, mount the base plate. (4 screws on the base plate, 1 screw for the motor)
5. After mounting, put the drive spring on hook C of the carriage plate.

REMOVAL OF THE TRAY

1. Removal of the disc tray
 Press the rear edge of the rack, marked (A) in Fig. 4-5, while pulling the disc tray out to the position where it catches, illustrated in Fig. 4-6.
2. While pulling the clamp holder (B) (see Fig. 4-6) upward with the right hand, hold the tray as indicated by (C) in the left hand and pull it outward. Take care not to allow the $\phi 4$ steel ball to fall (we recommend holding the ball in place with the left index finger while extracting the tray).

5.2 Mechanism section

- NOTES:**
- Parts without part number cannot be supplied.
 - The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - For your parts Stock Control, the fast moving items are indicated with the marks ****** and *****.
 - ** GENERALLY MOVES FASTER THAN ***
 - This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
 - Parts marked by \odot are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

NOTE:
The indicated semiconductors are representative ones only. Other alternative semiconductors may be used and are listed in the parts list.

CIRCUIT DIAGRAM PRECAUTIONS

This circuit diagram is applicable to the KU and KC destinations. With respect to other destinations, Sections (A) and (B) of the MAIN BOARD ASSEMBLY are substituted in accordance with the figures below.

NOTE:

1. **RESISTORS:**
Indicated in Ω, 1/8W & 1/4W, ±5% tolerance unless otherwise noted k; kΩ, M; MΩ, (F); ±1%, (G); ±2%, (K); ±10%, (M); ±20% tolerance
2. **CAPACITORS:**
Indicated in capacity (μF)/voltage (V) unless otherwise noted p; pF. Indication without voltage is 50V except electrolytic capacitor.
3. **VOLTAGE, CURRENT:**
□; DC voltage (V) at no input signal
Value in () is DC voltage at rated power.
mA; DC current at no input signal
4. **OTHERS:**
➔; Signal route.
⊗; Adjusting point.

The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
* marked capacitors and resistors have parts numbers.
The underlined indicates the switch position.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.
