

Service Manual

ORDER NO.
ARP1570

COMPACT DISC PLAYER

PD-6100

PD-6100-S

MODEL PD-6100 AND PD-6100-S HAVE THREE VERSIONS :

| TYPE | Applicable model | | Power requirement | Export destination |
|------|------------------|-----------|--|--|
| | PD-6100 | PD-6100-S | | |
| HEM | ○ | ○ | AC220V, 240V (switchable) * | European continent |
| HB | ○ | — | AC220V, 240V (switchable) * | United Kingdom |
| SD | ○ | — | AC110V, 120V-127V, 220V, 240V (switchable) | Kingdom of Saudi Arabia and General market |

* Change the primary wiring of the power transformer.

- This manual is applicable to the HEM, HB and SD types.
- For the HB, SD and PD-6100-S/HEM types, refer to page 84.
- The PD-6100-S is the same as the PD-6100 except for the color.
- Ce manuel pour le service comprend les explications en français de réglage.
- Este manual de servicio trata del método ajuste escrito en español.

1. SAFETY INFORMATION

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

ADDITIONAL LASER PRECAUTIONS

- Laser Interlock Mechanism**

The clamp switch (S102) detects the completion of the Load in operation, and the ON/OFF status of the clamp switch is in turn detected by the microcomputer. The Laser diode is designed not to oscillate while the clamp switch is in OFF status. Consequently, if S102 is accidentally short-circuited, the interlock mechanism will become incapable of operation.

Moreover, when short-circuiting occurs between Pins 4 or 5 of CXA1081S (IC 1) and GND, or between Pin 29 of CXA1081S (IC 1) and GND, or between the terminals of Q1 (a Fault Condition will occur in all three cases), the laser diode will oscillate continuously. Note that during TEST Mode (see page 35), the interlock mechanism does not operate.
- While the bonnet is in opened status, if the pickup is positioned to allow direct visibility of the objective lens at the outer periphery from the outer diameter of the disc clumper (80-mm diameter), the pickup can be flooded with radiation of more than class 1 of the laser optical system during any Fault Condition in Item 1 above or during TEST Mode.

2. SPECIFICATIONS

1. General

Type Compact disc digital audio system
 Usable discs Compact Disc
 Signal format Sampling frequency: 44.1kHz
 Quantized bit number: 16 bit linear

Power requirements

European models AC 220V, 50/60Hz
 U.K., Australian models AC 240V, 50/60Hz
 U.S., Canadian models AC 120V, 60Hz
 Other models AC 110/120–127/220/240V
 (switchable), 50/60Hz

Power consumption 16W
 Operating temperature +5°C – +35°C
 (+41°F – +95°F)

Weight 4.0kg (8lb, 13oz)
 External dimensions 420(W) × 315(D) × 98(H)mm
 16-1/2(W) × 12-3/8(D) × 3-7/8(H) in.

2. Audio section

Frequency response 4Hz–20kHz (±0.5dB) (EIAJ)
 S/N 104dB or more (EIAJ)
 Dynamic range 96dB or more (EIAJ)
 Channel separation 100dB or more (EIAJ)
 Total harmonic distortion 0.0035% or less (EIAJ)
 Output voltage 2.2V ± 0.3V (EIAJ)
 Wow and flutter Limit of measurement
 (±0.001% W.PEAK) or less (EIAJ)

Number of channels 2 channels (stereo)
 Digital output Coaxial output: 0.5Vp-p (75Ω)

3. Output terminal

Audio line output terminal
 Coaxial digital output terminal
 Headphone jack (with volume control)

4. Functions

- Play
- Pause
- Manual search
- Track search
- Index search
- Direct track search
- One track repeat
- All track repeat
- Programmed repeat
- Programmed playback
- Pause program
- Add-on program
- Auto program editing
- Time fade editing
- Random play
- Random play repeat
- Auto space
- Digital level control (remote control)
- Timer start
- One touch fade-in and fade-out

5. Accessories

- Remote control unit 1
- Size AAA/R03 dry cell batteries 2
- Output cable 1
- Operating instructions 1

NOTE:

The specifications and design of this product are subject to change without notice, due to improvements.

3. PANEL FACILITIES

FRONT PANEL

① POWER switch

Press to turn power to the unit ON and OFF.
If there is a disc in the unit when power is turned ON, playback will begin automatically. (Timer start function)

② Disc Tray

This is where the disc is set. When power is switched ON and the OPEN/CLOSE key is pressed, the tray is ejected forward. To insert the tray, press the OPEN/CLOSE key, or lightly push the tray in with your finger. With the disc tray open, pressing the PLAY key will close the disc tray and start playback.

③ OPEN/CLOSE key (▲)

Press when you wish to eject or load a disc. Each time the key is pressed, the tray is alternately pushed out or pulled in.

④ Indicators

- ATT LEVEL : The volume level of fade-in, fade-out, and output level is displayed.
- PROGRAM : Lights after programming (after program has been memorized).
- -REPEAT : Lights during repeat playback of one track.
- REPEAT : Lights during repeat playback.
- RANDOM : Lights during random playback.
- AUTO SPACE : Lights during auto space playback.

TRACK

1 - 20, OVER

(Music calendar) : Displays the current track number (during normal playback and programmed playback) or the track being programmed during programming operation. The lower figures light up in accordance with the number of tracks recorded on the disc, and the numbers of the tracks which have been played are deleted in order. (During programmed playback only the programmed tracks light.) For 21 or over, OVER will light.

- INDEX : Displays the index * number of the music section of a track or the track division.
- STEP : Displays the program steps.
- MIN (minute) : Displays the minutes of the elapsed time, total playback time, and remaining time.
- SEC (second) : Displays the seconds of the elapsed time, total playback time, and remaining time.
- TIME/REMAIN/TOTAL : Changes each time the TIME key is pressed.
 - TIME : Displays the track number of the track being played (TRACK) and the elapsed time (minutes and seconds).
 - REMAIN : Displays the remaining time on the track being played. When the TIME key is pressed again, the remaining time on the disc will be displayed.
 - TOTAL : Displays the total number of tracks on the disc (TRACK) and the overall playback time (minutes and seconds). During playback, the display goes on for about 5 seconds before changing to the TIME display.

Programmed playback operation displays the remaining time of the programmed tracks (REMAIN), and the total playback time (TOTAL).

- IN : Lights during fade-in.
- OUT : Lights during fade-out.
- ATT : The volume level of fade-in, fade-out, and output level is displayed by decreasing level (-dB).
- AUTO PGM EDIT : Displays when Auto Program Editing is set or used.
- TIME FADE EDIT : Displays when Time Fade Editing is set or used.

* The INDEX is a signal which is recorded within a track to indicate division of the track into separate turns and items of music.

⑤ **PROGRAM key (program memory)**

Use to program a sequence of tracks.

- Press this key after selecting a desired track with the track number keys. Tracks will be added to the program in the order in which they are selected.

⑥ **TRACK NUMBER keys (1 to 0)**

- Use to specify track numbers (track 1—track 99) for selection of tracks or program entry.
- Use to specify time (in minutes), during auto program editing and time fade editing.

⑦ **CLEAR key**

Press this key to clear the program.

⑧ **AUTO PROGRAM EDIT key**

Press to program a tune which may be played back within a specified time.

⑨ **TIME FADE EDIT key**

Press this key to end playback at a desired time with fade-out.

⑩ **INDEX SEARCH keys**

Searches, during playback or pause, for the music section of a track or the track index. When pressed, the unit will return to the previous index or advance to the next index.

[▷▷] : Advances to the next index number.

[◀◀] : Returns to the index number of the currently-playing music section or track.

⑪ **MANUAL SEARCH keys**

When the player is in playback or pause modes, these keys are pressed to perform fast forward or reverse operations to allow manual searching. These operations are only carried out during the time either key is pressed.

[▶▶] : For fast forward operation. If the end of the disc is reached during fast forward operation, "End" will be displayed and the player will enter the pause mode. [During programmed playback, the player will enter the pause mode right before it reaches the next track (program step).]

[◀◀] : For fast reverse operation. If the beginning of the disc is reached during fast reverse operation, the player will enter the playback mode. [During programmed playback, the player will enter the playback mode right before it reaches the previous track (program step).]

⑫ **TRACK SEARCH keys**

During normal playback, programmed playback or pause modes, these keys are pressed to search for the desired track. Pressing either key causes the player to advance to the next track or to return to the previous track. Even in stop mode, these keys can be used to select the desired track. Press the PLAY key to playback the desired track.

[▶▶] : When pressed once, playback advances to the beginning of the next track on the disc; when pressed continuously, playback advances to the beginning of succeeding tracks on the disc. (During programmed playback, it advances to the beginning of the next programmed track.)

[◀◀] : When pressed once, playback returns to the beginning of the currently playing track; when pressed continuously, playback shifts to the beginning of previous tracks on the disc. (During programmed playback it returns to the beginning of the previous programmed track.)

⑬ **Remote sensor**

⑭ **TIME key**

This key selects the display mode of the indicator panel. Each time the key is pressed, the indication changes from TIME, REMAIN, to TOTAL in that order. (For details concerning the display contents, refer to the explanation about the indicators.)

If pressed after pressing the track number key, the playback time of the selected track only is displayed.

⑮ **AUTO SPACE key**

During playback, there will be a pause of about three seconds before the next track is played.

⑯ **AUTO FADER IN key**

Press this key to start playback with fade-in sound. (Possible only in pause mode during playback.)

⑰ **AUTO FADER OUT key**

Press this key for fade-out sound. (After fade-out is completed, the unit will enter pause mode.)

⑱ **RANDOM PLAY key**

Press to begin random playback.

⑲ **REPEAT key**

Press this key for repeat playback. Pressing the key once, twice, or three times will change the repeat mode from single track repeat, all tracks repeat, and repeat playback cancellation.

Single track repeat:

The currently-playing track will repeat. The key can be used during normal playback, program playback, random playback.

All tracks repeat:

All tracks on the disc will be repeated.

- If pressed during normal playback mode, all tracks on the disc will be repeatedly played back.
- If pressed during programmed playback, the programmed tracks will be repeatedly played back in the programmed order.
- In the case of random play mode, after all the tracks have been played, random play will start again.

⑳ **PLAY key/indicator (▷)**

Press to begin playback, and to cancel the pause mode.

㉑ **PAUSE key/indicator (⏸)**

Press to temporarily interrupt playback. When pressed again, the pause mode is cancelled and playback resumes.

㉒ **PHONES (headphones) jack**

When you wish to use headphones, insert the plug for the headphones into the headphone jack.

23 PHONES LEVEL control knob

Use to adjust the level of sound when using headphones. Turning the knob to the right increases the sound level.

24 STOP key (■)

Press to stop playback. When pressed, the player goes into stop mode and all operations stop.

NOTE:

The output level of the digital out output (digital data) cannot be controlled. (It will not fade in or fade out.)

Reference:

Fade-in : With no sound, the sound fades in gradually getting louder.

Fade-out : The sound gradually gets softer until there is no sound.

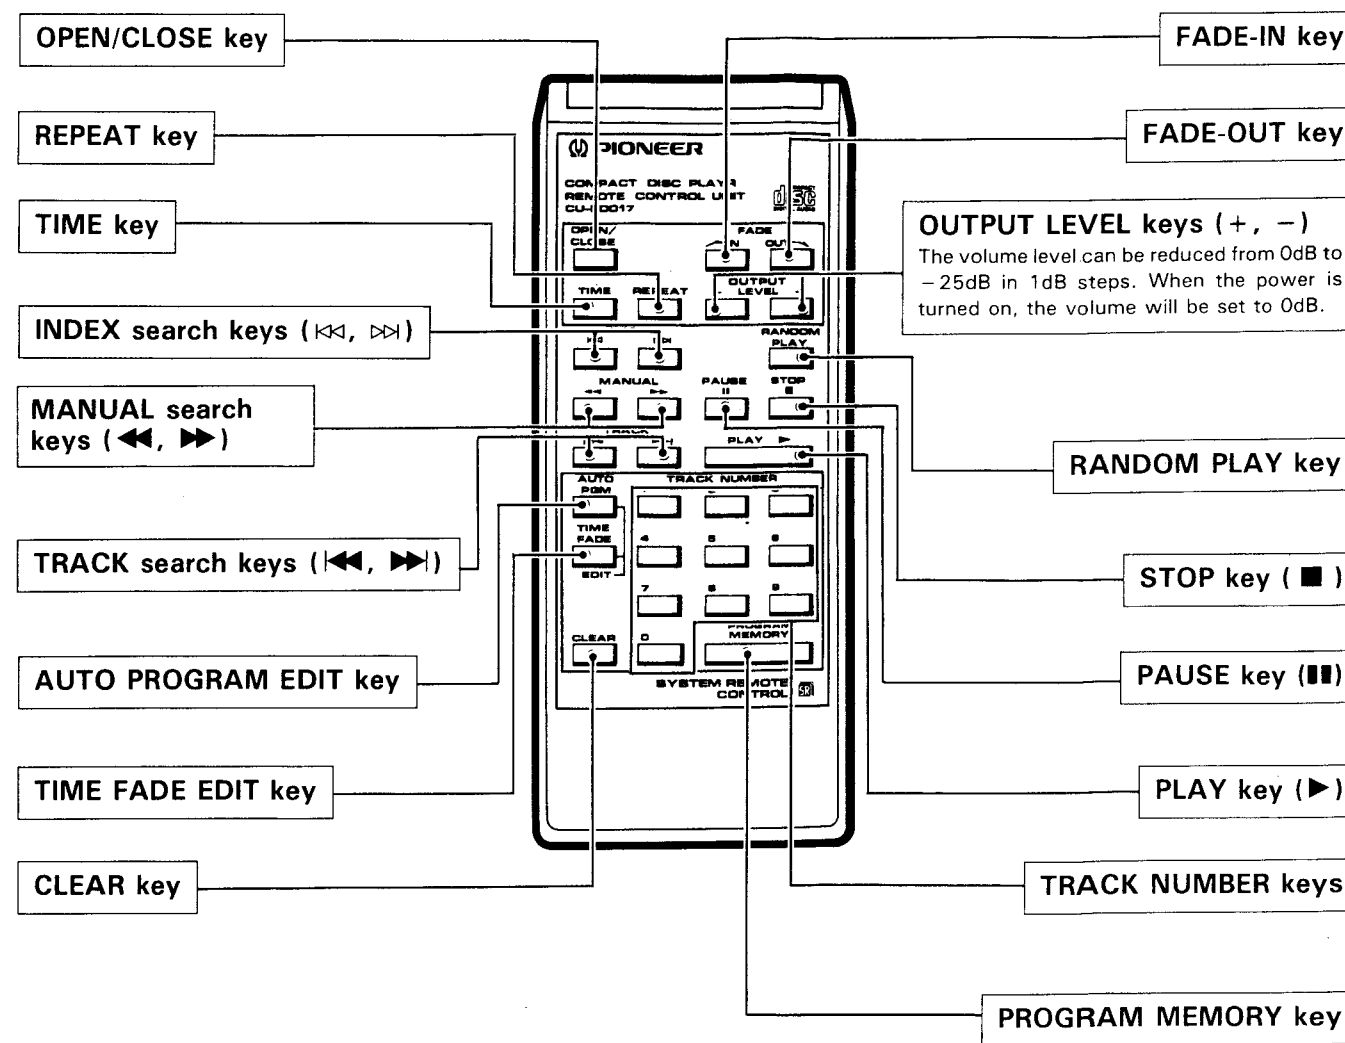

REAR PANEL

Coaxial digital output terminal (DIGITAL OUT)

This terminal allows output of disc audio data and subcode (signals which can be recorded together with the audio signal) as digital signals.

REMOTE CONTROL UNIT

Digital level controller

By using the OUTPUT LEVEL keys [+ , -], the volume level can be controlled in 1dB steps from 0dB to -25dB of the digital circuit processing.

- To increase the volume level: Press the [+] LEVEL key. (If the volume level is already set at 0dB, there will be no change.)
- To decrease the volume level: Press the [-] LEVEL key. (When the key is held down, the volume level will stop at -25dB).

When the volume level is adjusted, it will be displayed on the ATT LEVEL indicator and the ATT indicator.

NOTE:

The headphones can also be adjusted simultaneously. However, the volume level of the digital output from the DIGITAL OUT terminal cannot be adjusted.

NOTES :

- Parts without part number cannot be supplied.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your parts Stock Control, the fast moving items are indicated with the marks $\star\star$ and \star .
 $\star\star$ GENERALLY MOVES FASTER THAN \star .
 This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

9. ELECTRICAL PARTS LIST

NOTES :

- Parts without part number cannot be supplied.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your parts Stock Control, the fast moving items are indicated with the marks ★★ and ★.

★★ GENERALLY MOVES FASTER THAN ★.

This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

| | | | | |
|-------|----------------------|-----|---------|------|
| 560 Ω | 56 × 10 ¹ | 561 | RD1/4PS | 561J |
| 47k Ω | 47 × 10 ³ | 473 | RD1/4PS | 473J |
| 0.5 Ω | 0R5 | | RN2H | 0R5K |
| 1 Ω | 010 | | RS1P | 010K |

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

| | | | | |
|---------|-----------------------|------|---------|-------|
| 5.62k Ω | 562 × 10 ¹ | 5621 | RN1/4SR | 5621F |
|---------|-----------------------|------|---------|-------|

10. ADJUSTMENT

The adjustments for this unit are shown below. Adjustments must be made in the order in which they are listed.

● ADJUSTMENTS

1. Tracking error offset, focus offset and RF offset adjustment
2. RF level adjustment
3. LD (laser diode) power check
4. Focus lock and spindle lock check
5. Grating adjustment (1), (2)
6. Tracking balance adjustment
7. Tangential adjustment
8. Focus gain adjustment
9. Tracking gain adjustment
10. VCO free run frequency adjustment
11. Focus error check
12. MSB adjustment

● REQUIRED EQUIPMENT

1. Dual trace oscilloscope
2. Optical power meter
3. Test disc (YEDS-7)
4. Loop gain adjustment filter
5. Signal generator
6. Frequency counter
7. Other commonly used measuring equipment

● ABOUT THE TEST MODE

All adjustments must be carried out with the unit in the test mode.

Activating and releasing the test mode

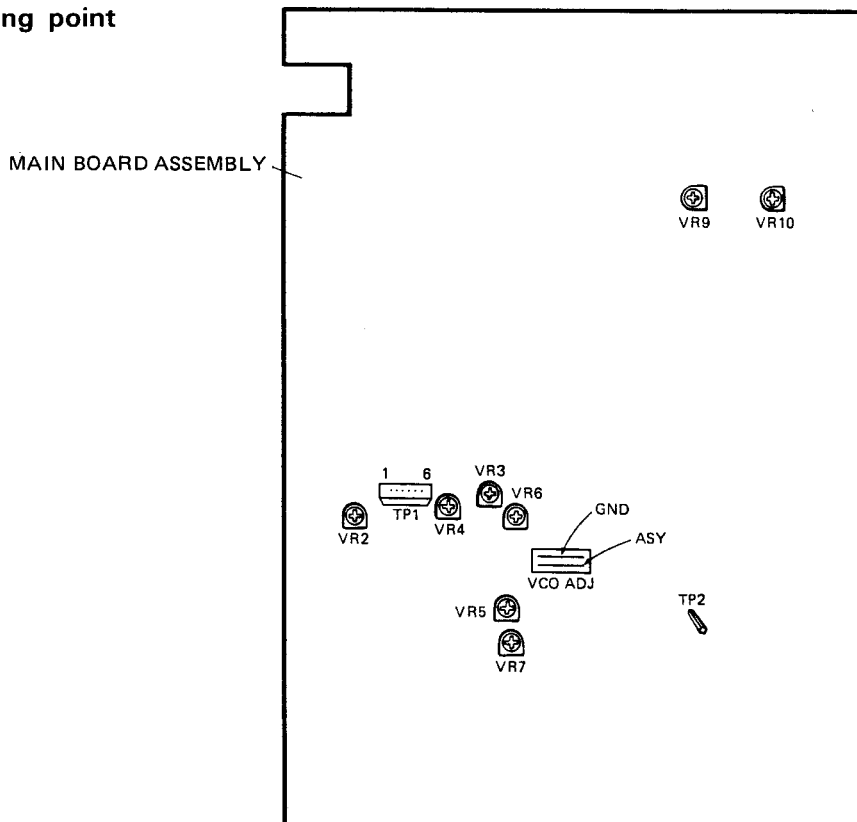

- (1) To activate the test mode, turn ON the power switch (S301) with the test mode switch (S1) in the ON position.
- (2) The test mode is released by turning the power switch OFF.

The functions for the keys in the test mode are outlined in Table 10-1.

● ADJUSTMENT VRs AND THEIR NAMES

- VR1: Laser power
- VR2: RF offset (RF.OFS)
- VR3: Focus gain (FCS.GAN)
- VR4: Tracking gain (TRK.GAN)
- VR5: Tracking balance (TRK.BAL)
- VR6: Focus offset (FCS.OFS)
- VR7: Tracking offset (TRK.OFS)
- VR8: VCO adjust (VCO.ADJ)
- VR9: MSB adjust R-CH (MSB.ADJ-R)
- VR10: MSB adjust L-CH (MSB.ADJ-L)

Adjusting point

In the test mode, the servos must be closed and opened individually. Consequently, the servos must each be closed in the proper sequence (serial sequence) in order to put the machine into the play mode. Note also that during test mode the unit will not enter the play mode when the PAUSE (⏸) key is pressed alone.

For example, in order to change from the stop to the play mode, the function keys must be pressed in the following order:

* In the test mode, the servos must be operated in serial sequence.

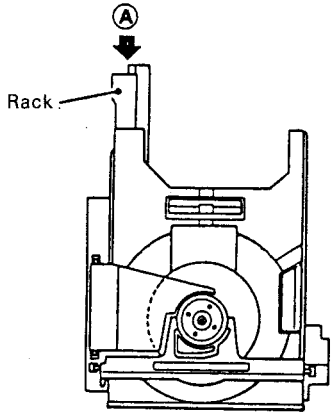

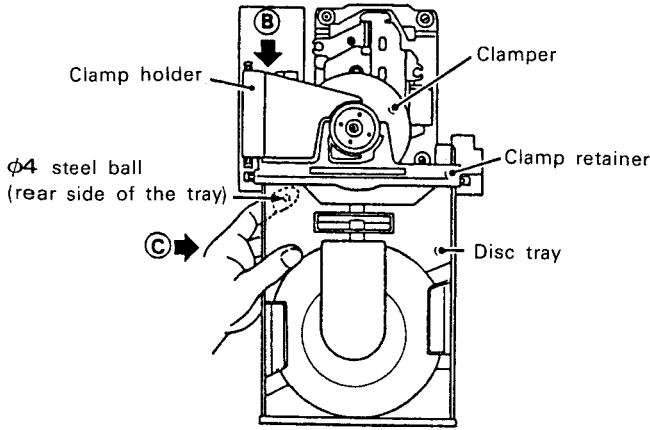

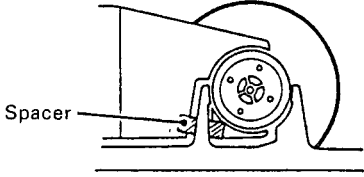

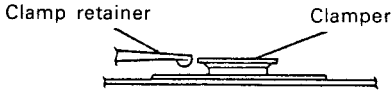

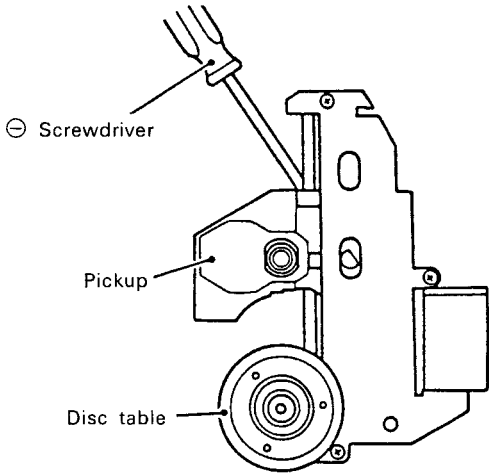

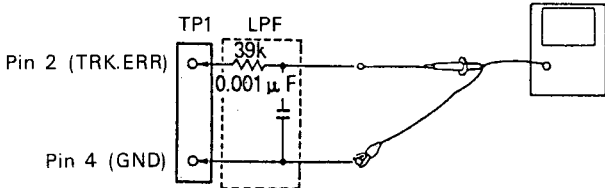

● KEY FUNCTIONS IN THE TEST MODE

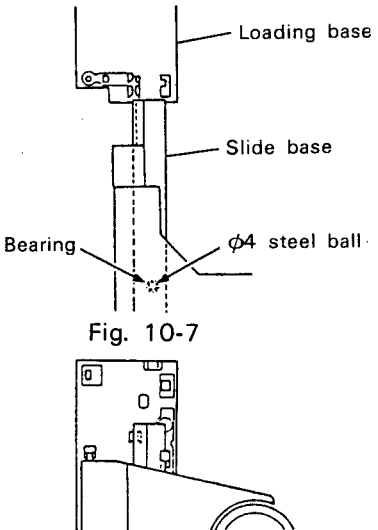

| Symbol | Key name | Function in test mode | Description |
|--------|-------------------|----------------------------------|--|
| ▷ | TRACK FWD | Focus servo close | Turns ON the laser diode, and raises and lowers the focusing actuator to close the focus servo. |
| ▷ | PLAY | Spindle servo close | Closes the servo in the CLV-A mode after kicking the spindle motor. |
| ⏸ | PAUSE | Tracking servo close/open | Acts as toggle: closes the tracking servo and activates play mode when pressed (provided the focus and spindle servos are closed), at which time the PAUSE indicator illuminates; opens the tracking servo when pressed again. |
| ◁ | MANUAL SEARCH REV | Carriage reverse (moves inward) | Moves carriage quickly (3 cm/s) toward inner-most track. Be careful not to move too far as there is no safety device to stop the carriage. |
| ▷ | MANUAL SEARCH FWD | Carriage forward (moves outward) | Moves carriage quickly (3 cm/s) toward outer-most track. Be careful not to move too far as there is no safety device to stop the carriage. |
| □ | STOP | Stop | Stops all servos and returns system to its initial state. |
| ⏏ | OPEN/CLOSE | Disc tray open/close | Opens and closes the disc tray. However, pickup does not return to rest on OPEN, and it remains stationary on CLOSE. |

Table 10-1

| Step No. | Oscilloscope Setting | | Test Points | Adjusting Points | Check items/Adjustment specifications | Adjustment procedure |
|----------|---|---|---|---|---|---|
| | V | H | | | | |
| 1 | Tracking error offset, focus offset and RF offset adjustment | | | | | |
| | | | TP1 Pin 2 (TRK.ERR) TP1 Pin 6 (FCS.ERR) TP1 Pin 1 (RF. OUTPUT) | VR5 (TRK.BAL) VR7 (TRK.OFS) VR6 (FCS.OFS) VR2 (RF.OFS) | Tracking error offset 45° 0V±50 mV Focus offset 0V±50 mV RF offset 100 mV±50 mV | <ul style="list-style-type: none"> ● Set the unit to test mode (see page 35). ● Set VR5 TRK.BAL (tracking balance) to the position about 45° to the left of center. ● Adjust VR7 TRK.OFS (tracking offset) so that the TRK.ERR (tracking error) voltage at TP1 Pin 2 becomes 0V±50 mV. ● Adjust VR6 FCS.OFS (focus offset) so that the FCS.ERR (focus error) voltage at TP1 Pin 6 becomes 0V±50 mV. ● Adjust VR2 RF.OFS (RF offset) so that the RF output voltage at TP1 Pin 1 becomes 100 mV±50 mV. <p>Note: When adjusting the tracking error offset, always perform "6. Tracking Balance Adjustment."</p> |
| 2 | RF level adjustment | | | | | |
| | | | TP1 Pin 1 (RF OUTPUT) | VR1 (Laser power) | 1.8V±0.1V | <ul style="list-style-type: none"> ● Set the unit to test mode (see page 35). ● Play the test disc, connect the oscilloscope to TP1 Pin 1 (RF output), and measure the P-P voltage of the RF waveform. ● Check that the voltage is 1.8V±0.1V |
| 3 | LD (laser diode) power check | | | | | |
| | | | | | Less than 0.13 mW | <ul style="list-style-type: none"> ● Set the unit to test mode (see page 35). ● Press the TRACK FWD (▶▶) key to turn ON the LD (laser diode). ● Place the sensor of the optical power meter directly above the objective lens and confirm that LD power is less than 0.13 mW. |

| Step No. | Oscilloscope Setting | | Test Points | Adjusting Points | Check items/ Adjustment specifications | Adjustment procedure |
|----------|--|-----------------------|-----------------------------|------------------|---|--|
| | V | H | | | | |
| 4 | Focus lock and spindle lock check | | | | | |
| | V 0.5V/div | H 100 msec/div. | TP1 Pin 1 (RF output) | | RF signal is output Forward (clockwise) rotation | <ul style="list-style-type: none"> ● Set the test disc. ● Set the unit to test mode (see page 35). ● Press the MANUAL SEARCH FWD (▷▷) key to move the pickup to the center of the disc. ● Observe the output (RF output) of TP1 Pin 1 on the oscilloscope. Confirm that the RF signal is output after the TRACK FWD (▷▷) key is pressed. ● Press the PLAY (▷) key and confirm that the disc rotates at constant speed (approx. 300 rpm near center of disc) in the forward (clockwise) direction; make sure that the disc does not rotate too fast or counterclockwise. |
| 5 | Grating adjustment (1) | | | | | |
| |  <p style="text-align: center;">Fig. 10-1</p> | | | | <p>Remove the disc tray before beginning this adjustment.</p> <ul style="list-style-type: none"> ● Removal of the disc tray | |
| |  <p style="text-align: center;">Fig. 10-2</p> | | | | <ol style="list-style-type: none"> 1. Press the rear edge of the rack, marked (A) in Fig. 10-1., while pulling the disc tray out to the position where it catches, illustrated in Fig. 10-2. (*1) When the rear section of the rack (arrow (A)) is pressed, first the disc clamp is released. To slide out the disc tray fully, continue to press after the clamp has been released. 2. While pulling the clamp holder (B) (see Fig. 10-2.) upward with the right hand, hold the tray as indicated by (C) in the left hand and pull it outward. Take care not to allow the φ4 steel ball to fall out (it is recommended to hold the ball in place with the left index finger while extracting the tray). | |

| Step No. | Oscilloscope Setting | | Test Points | Adjusting Points | Check items/ Adjustment specifications | Adjustment procedure |
|----------|--|---|-------------|------------------|--|---|
| | V | H | | | | |
| |  <p style="text-align: center;">Fig. 10-3</p> | | | | | |
| |  <p style="text-align: center;">Fig. 10-4</p> | | | | | |
| |  <p style="text-align: center;">Fig. 10-5</p> | | | | | <ul style="list-style-type: none"> • Set the unit to test mode (see page 35). • Press the MANUAL SEARCH FWD (▷▷) key to move the pickup to the vicinity of what would be the center of the disc. Position the pickup so its grating adjustment screw is visible through the elongated hole on the spindle motor side of the servo mechanism base plate. • As shown in Fig. 10-5., insert a ⊖ screwdriver (2 mm precision screwdriver) from the rear of the mechanism and check that the grating adjustment screw can be rotated. • Mount the test disc; be sure to insert a 3 – 5 mm spacer (if no spacer is available, use a hex wrench) between the clamp holder and the clamp retainer, as shown in Fig. 10-3. • Confirm that the clasper and the clamp retainer are not contacting one another (Fig. 10-4). • Press the TRACK FWD (▷▷) and the PLAY (▷) keys sequentially to close the focus and spindle servos (do not close the tracking servo). • Insert a 4 kHz-cutoff low pass filter between the oscilloscope and TP1 Pins 2 (TRK.ERR) and 4 (GND) as shown in Fig. 10-6. and observe the waveform output by TP1 Pin 2 TRK.ERR (tracking error) on the oscilloscope. |
| |  <p style="text-align: center;">Fig. 10-6</p> | | | | | |

| Step No. | Oscilloscope Setting | | Test Points | Adjusting Points | Check items/ Adjustment specifications | Adjustment procedure |
|--|----------------------|------------|---------------------------|--|--|---|
| | V | H | | | | |
| | 0.5V/div | 5 msec/div | TP1 Pin 2 (TRK.ERR) | Grating adjustment screw Grating adjustment screw | Null point Max. amplitude | <ul style="list-style-type: none"> Turn the grating adjustment screw with the ⊖ screwdriver to find the null point (see Photo 10-1.). Next, slowly rotate the screw counterclockwise and adjust to the point where the waveform (tracking error signal) first achieves its maximum amplitude (see Photo 10-3.). <p>Note: Avoid applying pressure to the screwdriver while adjusting the screw. Doing so causes the pickup to move inward, making adjustment more difficult.</p> <ul style="list-style-type: none"> Lastly, remove the low pass filter and confirm that the tracking error signal p-p voltage does not greatly vary when the pickup is moved to the inner-most and outer-most tracks of the disc. <p>If the levels diverge by ±10% or more re-adjust the maximum error amplitude point by rotating the grating adjustment screw.</p> |
|  <p>Fig. 10-7</p> <p>Fig. 10-8</p> | | | | | | <p>Remount the disc tray according to the following procedure when the grating adjustment is complete.</p> <ol style="list-style-type: none"> Remove the disc and the spacer. While lifting the clamp holder [marked ⊕ in Fig. 10-2.] with the right hand, hold the tray in the left hand as indicated by ⊙ and slide the slide base into the hard resin fittings on the loading base as shown in Fig. 10-7. to reinsert the disc tray. (At this time, be sure to hold the $\phi 4$ steel ball in place with the index finger of the left hand.) (Also, be careful that the front panel is not damaged by the bearing of the slide base at the $\phi 4$ steel ball section coming into contact with the panel.) Insert the slide base so that it fits into the two hard resin fittings at the rear of the loading base (see Fig. 10-8.). Insert the tray all the way. |

Photo 10-1 Null point

Photo 10-2 This is not the null-point waveform

10. RÉGLAGE

On trouvera ci-après les réglages requis pour cet appareil. Ils doivent être exécutés dans l'ordre donné.

● AJUSTEMENTS

1. Ajustement de décalage d'erreur d'alignement, de décalage de mise au point et de décalage RF
2. Vérification de niveau RF
3. Vérification d'alimentation LD (diode laser)
4. Vérification de verrouillage de mise au point et de verrouillage d'axe
5. Ajustement de grille (1), (2)
6. Ajustement d'équilibre d'alignement
7. Ajustement tangentiel
8. Ajustement de gain de mise au point
9. Ajustement de gain d'alignement
10. Ajustement de fréquence libre VCO
11. Vérification d'erreur de mise au point
12. Ajustement MBS

● EQUIPEMENTS NECESSAIRES

1. Oscilloscope à double tracé
2. Wattmètre optique
3. Disque d'essai (YEDS-7)
4. Filtre d'ajustement de gain de boucle
5. Générateur de signal
6. Fréquencemètre
7. Autres équipements de mesure généralement utilisés

● A PROPOS DU MODE D'ESSAI

Tous les réglages doivent être effectués, l'appareil se trouvant en mode d'essai.

Activation et annulation du mode d'essai

- (1) Pour activer le mode d'essai, allumer (ON) l'interrupteur d'alimentation (S301) après avoir placé l'interrupteur de mode d'essai (S1) à la position ON.
- (2) Le mode d'essai est annulé en ramenant l'interrupteur d'alimentation sur OFF.

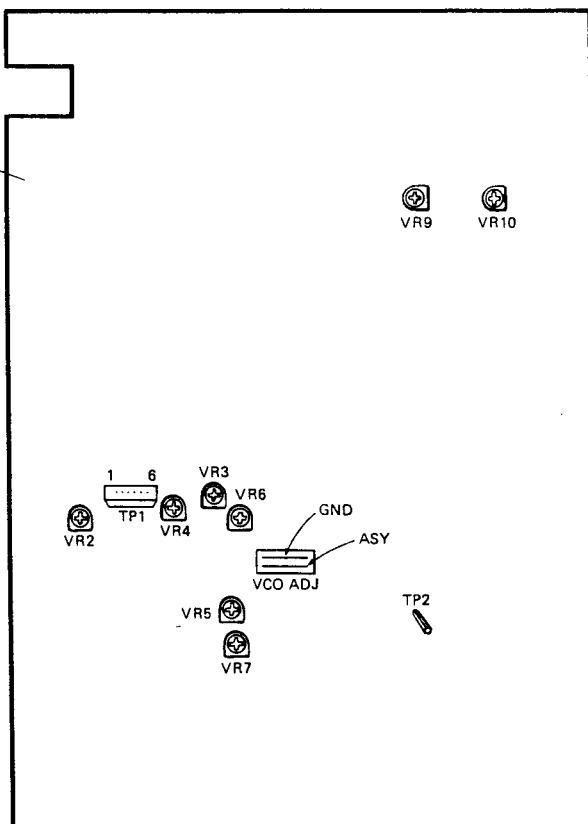

Les fonctions des touches du mode d'essai sont décrites au Tableau 10-1.

● DISPOSITIFS D'AJUSTEMENT ET NOMENCLATURE

- VR1: Alimentation laser
- VR2: Décalage RF (RF.OFS)
- VR3: Gain de mise au point (FCS.GAN)
- VR4: Gain d'alignement (TRK.GAN)
- VR5: Equilibrage d'alignement (TRK.BAL)
- VR6: Décalage de mise au point (FCS.OFS)
- VR7: Décalage d'alignement (TRK.OFS)
- VR8: Ajustement VCO (VCO.ADJ)
- VR9: Ajustement MSB Canal droit (MSB.ADJ-R)
- VR10: Ajustement MSB Canal gauche (MSB.ADJ-L)

Point de réglage

MONTAJE DEL TABLERO PRINCIPAL

En mode d'essai, les servos doivent être individuellement fermés et ouverts. En conséquence, les servos doivent chacun être fermés dans la séquence correcte (séquence sérielle) afin de placer l'appareil en mode de lecture. Remarquer également que pendant le mode d'essai, l'appareil ne se placera pas en mode de lecture par une

pression sur la seule touche PAUSE (⏸).

Par exemple, pour passer du mode d'arrêt au mode de lecture, les touches de fonction doivent être actionnées dans l'ordre suivant:

* En mode d'essai, les servos doivent être opérés en séquence sérielle.

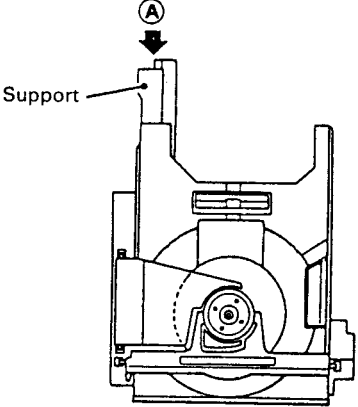

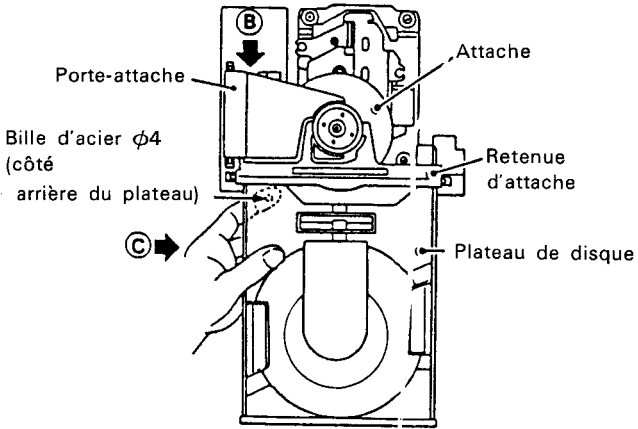

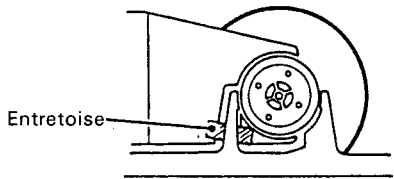

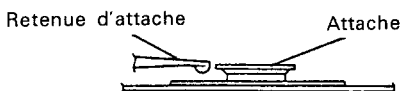

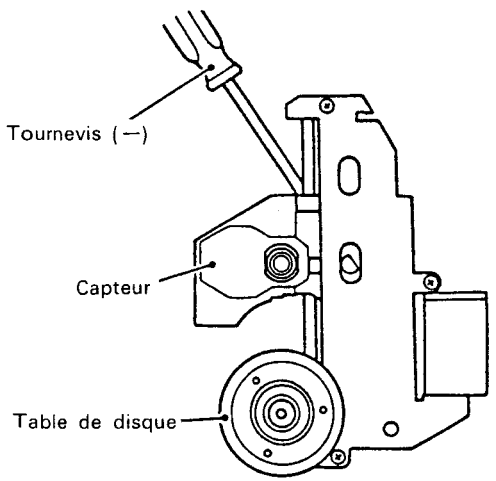

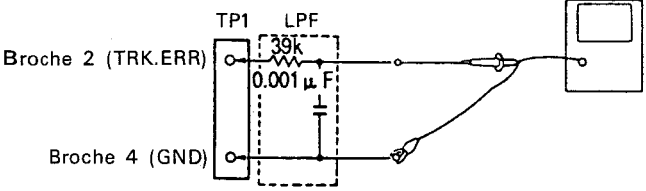

● FONCTIONS DES TOUCHES EN MODE D'ESSAI

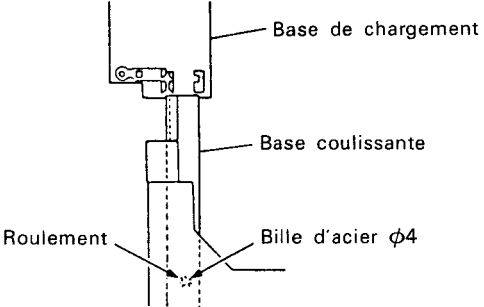

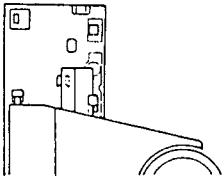

| Symbole | Nom de touche | Fonction en mode d'essai | Description |
|---------|-------------------|---|---|
| ▷▷ | TRACK FWD | Servo de mise au point fermé | Allume la diode laser et élève ou abaisse le dispositif de commande de mise au point pour fermer le servo de mise au point. |
| ▷ | PLAY | Servo d'axe fermé | Ferme le servo en mode CLV-A après cognement du moteur d'axe. |
| ⏸ | PAUSE | Fermeture/ouverture de servo d'alignement | Agit comme interrupteur articulé: ferme le servo d'alignement et active le mode de lecture quand poussé (à condition que les servos de mise au point et d'axe soient fermés), auquel moment le témoin PAUSE s'allume; ouvre le servo d'alignement à la pression suivante. |
| ▷◁ | MANUAL SEARCH REV | Inversion du chariot (déplacement vers l'intérieur) | Déplace rapidement (3 cm/sec) le chariot vers la plage la plus au centre. Prendre garde à ne pas déplacer trop loin, car il n'existe pas de dispositif de sécurité pour arrêter le chariot. |
| ▷▷ | MANUAL SEARCH FWD | Avance du chariot (déplacement vers l'extérieur) | Déplace rapidement (3 cm/sec) le chariot vers la plage la plus à l'extérieur. Prendre garde à ne pas déplacer trop loin, car il n'existe pas de dispositif de sécurité pour arrêter le chariot. |
| □ | STOP | Arrêt | Arrête tous les servos et ramène le système à son état initial. |
| ⏏ | OPEN/CLOSE | Ouverture/fermeture de plateau de disque | Ouvre et ferme le plateau du disque. Cependant, le capteur ne revient pas à la position de repos à OPEN et il reste stationnaire à CLOSE. |

Tableau 10-1.

10. AJUSTE

A continuación se ofrecen los ajustes para esta unidad. Los ajustes deberán realizarse en el orden indicado

● AJUSTES

1. Ajuste de la desviación del error de seguimiento, desviación de enfoque y desviación de RF.
2. Ajuste del nivel de RF
3. Comprobación de la energía del diodo láser (LD)
4. Comprobación de la sincronización del foco y del eje
5. Ajuste de retícula
6. Ajuste del equilibrio de seguimiento
7. Ajuste tangencial
8. Ajuste de la ganancia de enfoque
9. Ajuste de la ganancia de seguimiento
10. Ajuste de la frecuencia de oscilación libre del oscilador controlado por tensión (VCO)
11. Comprobación del error de enfoque
12. Ajuste de MSB

● EQUIPOS REQUERIDOS

1. Osciloscopio de doble traza
2. Medidor de energía óptica
3. Disco de prueba (YEDS-7)
4. Filtro de ajuste de ganancia de bucle
5. Generador de señales
6. Frecuencímetro
7. Otros equipos de medición de uso normal

● ACERCA DEL MODO DE PRUEBA

Todos los ajustes deberán efectuarse con la unidad en el modo de prueba.

Activación y desactivación del modo de prueba

- (1) Para activar el modo de prueba, ponga en ON el interruptor de la alimentación (S301) con el interruptor de modo de prueba (S1) en la posición ON.
- (2) El modo de prueba se desactiva poniendo el interruptor de la alimentación en OFF.

Las funciones de las teclas en el modo de prueba se describen en la tabla 10-1.

● RESISTORES VARIABLES (VR) DE AJUSTE Y SUS NOMBRES

- VR1: Energía láserica
 VR2: Desviación de RF (RF.OFS)
 VR3: Ganancia de enfoque (FCS.GAN)
 VR4: Ganancia de seguimiento (TRK.GAN)
 VR5: Equilibrio de seguimiento (TRK.BAL)
 VR6: Desviación de enfoque (FCS.OFS)
 VR7: Desviación de seguimiento (TRK.OFS)
 VR8: Ajuste del VCO (VCO.ADJ)
 VR9: Ajuste de MSB del canal derecho (MSB.ADJ-R)
 VR10: Ajuste de MSB del canal izquierdo (MSB.ADJ-L)

Punto de ajuste

ENSEMBLE DE PLAQUETTE PRINCIPALE

En el modo de prueba, los servos deberán cerrarse y abrirse individualmente. Por consiguiente, los servos deberán cerrarse en la secuencia apropiada (secuencia en serie) a fin de poner el aparato en el modo de reproducción. Tenga en cuenta además que durante el modo de prueba el aparato no entrará en el modo de reproducción cuando haya presionado la tecla PAUSE (■).

Por ejemplo, para cambiar del modo de parada al de reproducción tendrá que presionar las teclas de función en el orden siguiente:

* En el modo de prueba, los servos deberán operarse en la secuencia en serie

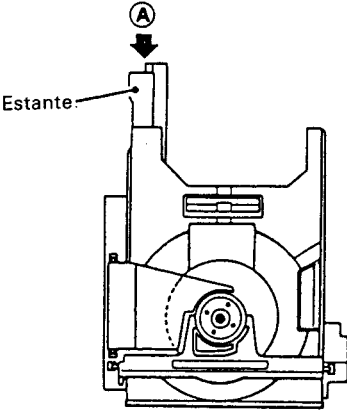

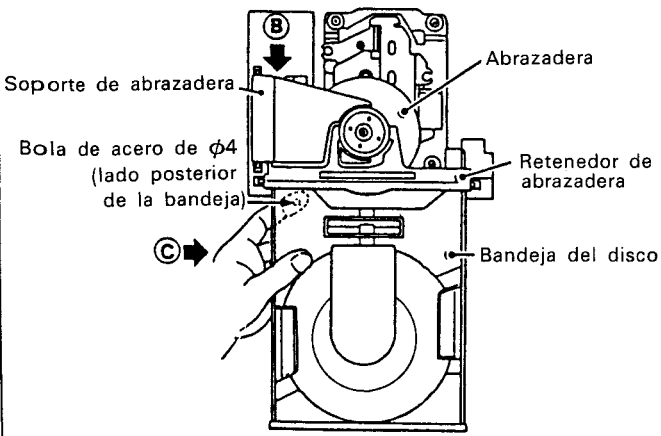

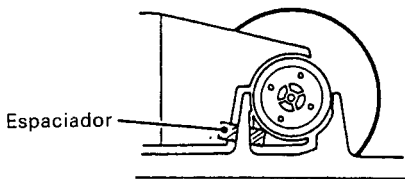

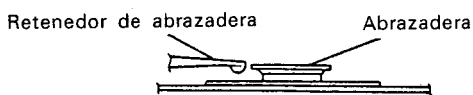

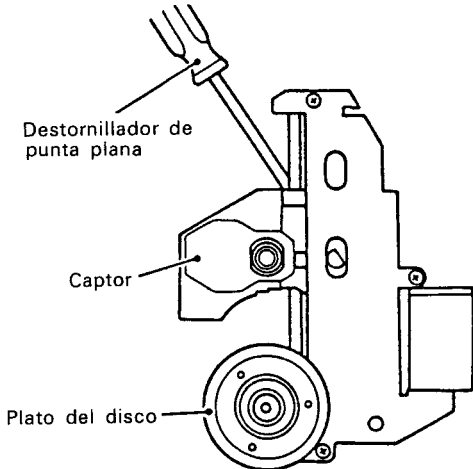

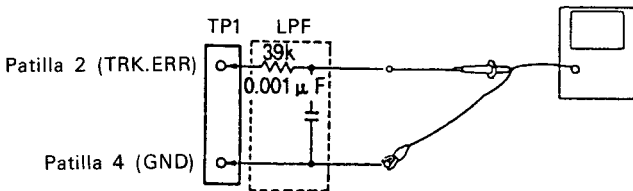

● FUNCIONES DE LAS TECLAS EN EL MODO DE PRUEBA

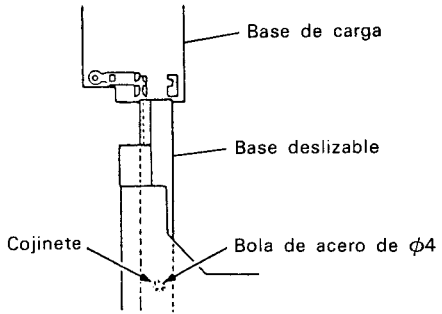

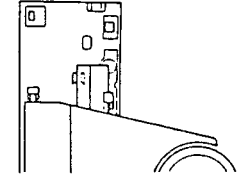

| Símbolo | Nombre de la tecla | Función en el modo de prueba | Descripción |
|---------|--------------------|--|---|
| >>> | TRACK FWD | Cierre del servo de enfoque | Activa el diodo láser y eleva y hace descender el actuador de enfoque para cerrar el servo de enfoque. |
| > | PLAY | Cierre del servo del eje | Cierra el servo en el modo CLV-A después de impulsar el motor del eje. |
| ■ | PAUSE | Cierre/apertura del servo de seguimiento | Actúa como conmutador: cierra el servo de seguimiento y activa el modo de reproducción cuando se presiona (suponiendo que los servos de enfoque y del eje estén cerrados), momento en el que se encenderá el indicador PAUSE; y abre el servo de seguimiento cuando vuelve a presionarse. |
| <<< | MANUAL SEARCH REV | Retroceso del carro (se mueve hacia adentro) | Mueve el carro rápidamente (3 cm/s) hacia la pista más interior. Tenga cuidado para no moverlo demasiado ya que no hay dispositivo de seguridad para parar el carro. |
| >>> | MANUAL SEARCH FWD | Avance del carro (mueve el carro hacia afuera) | Mueve el carro rápidamente (3 cm/s) hacia la pista más exterior. tenga cuidado para no moverlo demasiado ya que no hay dispositivo de seguridad para parar el carro. |
| □ | STOP | Parada | Para todos los servos y devuelve el sistema a su estado inicial. |
| ⏏ | OPEN/CLOSE | Apertura/cierre de la bandeja del disco | Abre y cierra la bandeja del disco. Sin embargo, el captor no regresa a su soporte en OPEN y permanece estacionario en CLOSE. |

Tabla 10-1

| N.º de paso | Ajuste de osciloscopio | | Puntos de prueba | Puntos de ajuste | Ítems de comprobación/ especificaciones de ajuste | Procedimiento de ajuste |
|---|------------------------|---|---|---|---|--|
| | V | H | | | | |
| 1 Ajuste de la desviación del error de seguimiento, desviación de enfoque y desviación de RF | | | | | | |
| | | | TP1 Patilla 2 (TRK.ERR) TP1 Patilla 6 (FCS.ERR) TP1 Patilla 1 (RF. OUTPUT) | VR5 (TRK.BAL) VR7 (TRK.OFS) VR6 (FCS.OFS) VR2 (RF.OFS) | Desviación del error de seguimiento 45° 0V±50 mV Desviación de enfoque 0V±50mV Desviación de RF 100 mV±50 mV | <ul style="list-style-type: none"> • Ponga la unidad en el modo de prueba (consulte la página 65). • Ponga VR5 TRK.BAL (equilibrio de seguimiento) en una posición aproximadamente 45° a la izquierda del centro. • Ajuste VR7 TRK.OFS (desviación de seguimiento) de forma que la tensión TRK.ERR (error de seguimiento) en la patilla 2 de TP1 sea de 0V±50 mV. • Ajuste VR6 FCS.OFS (desviación de enfoque) de forma que la tensión de FCS.ERR (error de enfoque) en la patilla 6 de TP1 sea de 0V±50 mV. • Ajuste VR2 RF.OFS (desviación de RF) de forma que la tensión de salida de RF en la patilla 1 de TP1 sea de 100 mV±50 mV. <p>Nota: Cuando ajuste la desviación del error de seguimiento, realice siempre "6. Ajuste del equilibrio de seguimiento."</p> |
| 2 Ajuste del nivel de RF | | | | | | |
| | | | TP1 Patilla 1 (RF OUTPUT) | VR1 (Energía láserica) | 1.8V±0.1V | <ul style="list-style-type: none"> • Ponga la unidad en el modo de prueba (consulte la página 65). • Reproduzca el disco de prueba, conecte el osciloscopio en la patilla 1 de TP1 (salida de RF) y mida la tensión P-P de la forma de onda de RF. • Compruebe si la tensión es de 1.8V±0.1V. |
| 3 Comprobación de la energía del diodo láser (LD) | | | | | | |
| | | | | | Menos de 0,13 mW | <ul style="list-style-type: none"> • Ponga la unidad en el modo de prueba (consulte la página 65). • Presione la tecla TRACK FWD (→) para activar el diodo láser (LD). • Coloque el sensor del medidor de energía óptica directamente sobre el objetivo y confirme si la energía del LD es inferior a 0,13 mW. |

| N.º de paso | Ajuste de osciloscopio | | Puntos de prueba | Puntos de ajuste | Ítems de comprobación/ especificaciones de ajuste | Procedimiento de ajuste |
|---|---|----------------------|------------------------------------|------------------|---|---|
| | V | H | | | | |
| 4 Comprobación de la sincronización del foco y del eje | | | | | | |
| | V 0,5V/div | H 100 mseg/div | TP1 Patilla 1 (salida de RF) | | La señal de RF sale Giro en sentido de avance (hacia la derecha) | <ul style="list-style-type: none"> • Instale el disco de prueba. • Ponga la unidad en el modo de prueba (consulte la página 65). • Presione la tecla MANUAL SEARCH FWD (▷▷) para mover el captor hacia el centro del disco. • Observe la salida de la patilla 1 de TP1 (salida de RF) en el osciloscopio. Compruebe si la señal de RF sale después de presionar la tecla TRACK FWD (▷▷). • Presione la tecla (PLAY) y compruebe si el disco gira a una velocidad constante (aproximadamente 300 r.p.m. cerca del centro del disco) en sentido de avance (hacia la derecha); cerciórese de que el disco no gire demasiado rápido ni hacia la izquierda. |
| 5 Ajuste de retícula (1) | | | | | | |
| |  <p>Figura 10-1.</p> | | | | <p>Antes de hacer este ajuste, extraiga la bandeja del disco.</p> <ul style="list-style-type: none"> • Extracción de la bandeja del disco. | |
| |  <p>Figura 10-2.</p> | | | | <ol style="list-style-type: none"> 1. Presione el borde posterior del bastidor, marcado con A en la figura 10-1., mientras tira de la bandeja del disco hacia afuera hasta la posición en la que agarre, mostrada en la figura 10-2. (*1) Cuando presione la sección trasera del bastidor (flecha A) empieza a liberarse la abrazadera del disco. Para deslizar completamente hacia afuera la bandeja del disco, continúe presionando hasta que se libere la abrazadera. 2. Tirando del soporte de abrazadera B (consulte la figura 10-2.) hacia arriba con la mano derecha, sujete la bandeja como se indica en C con la mano izquierda y tire de ella hacia afuera. Tenga cuidado de que no caiga la bola de acero de $\phi 4$ (recomendamos sujetar la bola en su lugar con el dedo índice de la mano izquierda al sacar la bandeja). | |

13. FOR HB, SD AND PD-6100-S/HEM TYPES

NOTES :

- Parts without part number cannot be supplied.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your parts Stock Control, the fast moving items are indicated with the marks $\star\star$ and \star .
 $\star\star$ GENERALLY MOVES FASTER THAN \star .
- This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- Parts marked by "O" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

The PD-6100/HB, SD and PD-6100-S/HEM types are the same as the PD-6100/HEM type with the exception of the following sections.

| Mark | Symbol & Description | Part No. | | | | Remarks |
|--------------------|--|----------------------|---------------------|---------------------|------------------------|---------|
