

Shown in the photo is the model PL-600X with black cabinet.

Service Manual

STEREO TURNTABLE

PL-600
PL-600X

 **PIONEER®**

MODEL PL-600 (PL-600X) COMES IN SIX VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Voltage	Remarks
KCT	120V only	Canada model (Without cartridge)
KUT	120V only	U.S.A. model (Without cartridge)
HET (PL-600X)	220V and 240V (Switchable)	Europe model (Without cartridge)
HBT (PL-600X)	220V and 240V (Switchable)	United Kingdom model (Without cartridge)
S	110V, 120V, 220V and 240V (Switchable)	General export model (Within cartridge)
S/G	110V, 120V, 220V and 240V (Switchable)	U.S. Military model (Within cartridge)

For descriptions of the D.D. motor and full auto mechanism employed in this model refer to the PL-630 service manual (ART-314).

1. SPECIFICATIONS

Motor and Turntable

Drive System	Direct-drive
Motor	Quartz PLL Hall motor
Turntable Platter	330mm diam. aluminum alloy die-cast
Inertial Mass	330kg-cm ² (including platter mat mass)
Speeds	33-1/3 and 45rpm
Wow and Flutter	Less than 0.025% (WRMS)
Signal-to-Noise Ratio	More than 78dB (DIN-B)

(with Pioneer cartridge model PC-200 or PC-150)

Rotational Characteristics

Build-up Time	Within 90° rotation at 33-1/3 rpm
Speed Deviation	Less than 0.002%
Speed vs. Load Characteristics	Stable up to 200 grams drag load
Speed Drift	Less than 0.00008%/h at 33-1/3rpm Less than 0.00003%/degree temp. change at 33-1/3rpm

Tonearm

Type	Static-balance type, S-shaped pipe arm
Effective Arm Length	237mm
Overhang	15mm
Usable Cartridge Weight	4g (min.) to 12.5 (max.) (For cartridge weights over 9g, attach the sub weight)
Arm Height Adjust Range	±3mm
Headshell weight	10.5g

Subfunctions

- Auto lead-in
- Auto-return
- Auto cut
- Quick play
- Anti-skating force control
- Stylus pressure direct-readout counterweight
- Arm height adjusting device
- Cueing device
- Free stop hinges

PC-200 Specifications (S model)

Type	Moving magnet type
Stylus	0.5 mil diamond (PN-200)
Output Voltage	2.5mV (1kHz, 50mm/s Peak velocity, LAT)
Tracking Force	1.7g to 2.3g (proper 2g)
Frequency Response	10 to 32,000Hz
Recommended Load	50kΩ +170 ~ 300pF

PC-150 Specifications (S/G model)

Type	Moving magnet type
Stylus	0.5 mil diamond (PN-150)
Output Voltage	3.5mV (1kHz, 50mm/s Peak velocity, LAT)
Tracking Force	1.7g to 2.5g (proper 2.2g)
Frequency Response	15 to 30,000Hz
Recommended Load	50kΩ +170 ~ 300pF

Semiconductors

ICs	7
Transistors	17
Diodes	5
Hall Elements	3
LED	6
Photo Transistors	2
CdS	1

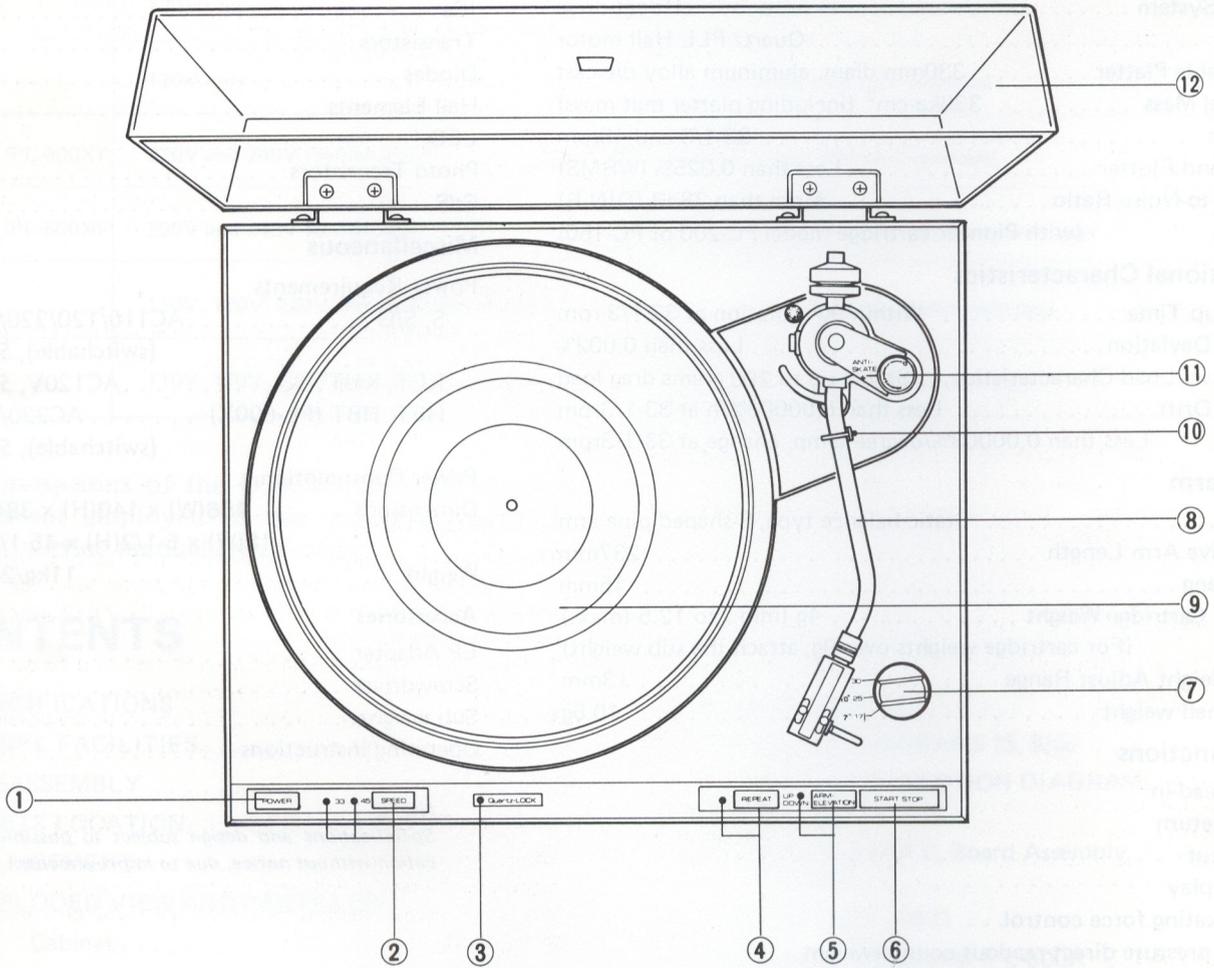

Miscellaneous

Power Requirements	
S, S/G	AC110/120/220/240V ~ (switchable), 50, 60Hz
KCT, KUT	AC120V, 50, 60Hz
HET, HBT (PL-600X)	AC220/240V ~ (switchable), 50, 60Hz
Power Consumption	22W
Dimensions	456(W) x 140(H) x 384(D)mm 18(W) x 5-1/2(H) x 15-1/8(D) in.
Weight	11kg/24lb 4oz.
Accessories	
EP Adapter	1
Screwdriver	1
Sub weight	1
Operating instructions	1

NOTE:

Specifications and design subject to possible modification without notice, due to improvements.

2. PANEL FACILITIES

① **POWER SWITCH**

ON... Press this switch and the power will come on. The SPEED switch indicator (45 or 33) will light up.
 OFF... The power will be cut off when this switch is released, and the indicator will go off.

NOTES:

- The platter will not rotate when the tonearm is on the arm-rest even when the POWER switch is set to ON.
- Always set the POWER switch to OFF when you do not intend to use your turntable.

② **SPEED SWITCH**

33..... Set the switch to this position when playing a 33-1/3rpm record such as an LP. When it is depressed, the 33 indicator lights up, and the platter rotates at a speed of 33-1/3 rpm.
 45..... Set the switch to this position when playing a 45rpm record like an EP. When it is depressed, the 45 indicator lights up, and the platter rotates at a speed of 45rpm.

③ **QUARTZ LOCK INDICATOR**

This indicator illuminates when the platter is revolving at the specified rate of 33 1/3 or 45 rpm.

NOTE:

If the platter speed varies, such as when the speed switch is changed from one position to another or when you press momentarily on the platter, the indicator will go off. As the platter revolution returns to the specified speed, the indicator will illuminate again.

④ **REPEAT SWITCH**

Press this switch for repeat play. When pressed, the indicator will light up, and the record will be played again. Press this switch again to release it. The indicator will go off and the repeat play function will be released.

NOTE:

- This switch cannot be operated even if depressed while the tonearm is moving out of contact with the record.

⑤ **ARM ELEVATION SWITCH**

Use this switch to interrupt play temporarily or to perform manual play. When the DOWN position, the tonearm will descend and when the UP position, the tonearm will rise. These two operations will be performed alternately every time the switch is pressed.

NOTES:

- When the POWER switch is set to ON, the tonearm will descend and the DOWN position.
- Always set the switch to DOWN for auto play.
- When the switch is at UP, the auto return cancelling mechanism is actuated and so there will be no auto return or auto cut.

⑥ **START/STOP SWITCH**

Press this switch for auto play. The platter will start to rotate, the tonearm will automatically move over to the edge of the record and play will begin (auto lead-in). If this switch is pressed during play, the tonearm will automatically return to the arm rest, the platter will stop rotating and play will be suspended (auto cut).

NOTE:

- This switch's STOP function has no effect on tonearm movement unless the tonearm is in contact with the record.

⑦ **DISC SIZE SWITCH**

Selects the switch that corresponds to the size of the record you want to hear for auto play operations.
 12"30..... For 30cm records
 10"25..... For 25cm records
 7"17..... For 17cm records

⑧ **TONEARM**

This tonearm is designed to apply the correct tracking force to the cartridge and to keep this force at the precise level for faithful tracking of the record grooves. It also has the job of switching the power on to the turntable.

- When the tonearm is moved from the arm rest to the platter, the power comes on, the platter rotates.
- When the tonearm is returned to the arm rest, the power to the turntable is cut off, the platter stops rotating.

⑨ **PLATTER/RUBBER PLATTER MAT**

When the tonearm is moved and power is supplied to the turntable, the platter will start rotating at the set rotation speed. The rubber platter mat stabilizes the records and also absorbs external vibration.

⑩ **ARM REST/CLAMPER**

The arm rest supports the tonearm when it is not being used. Set the tonearm on its rest when it is not playing records. Clamp it into position if you don't have any immediate plans to play records.

⑪ **ANTI-SKATE KNOB**

This knob is used to cancel out the harmful skating force which is generated during record play. For further details, see "ANTI-SKATING ADJUSTMENT."

⑫ **DUST COVER**

Keep this closed unless operating the controls or tonearm, or changing over records. This serves to keep dust from adhering to the records during record play. When fully opened and pulled straight up, this dust cover can be removed from the cabinet.

3. DISASSEMBLY

3.1 PANEL ASS'Y AND ARM BASE

1. Undo screw ① ~ ④ to remove the top cover unit.
2. Disconnect the AC power cord connector, and undo screws ⑤ and ⑥ to remove the cord support bracket.
3. Undo screws ⑦ ~ ⑩ to remove the base plate.
4. Move the tonearm across to the center shaft to enable the panel ass'y to be lifted off.
5. Undo screw ⑪ to disconnect the ground lead.
6. And finally undo screws ⑫ ~ ⑭ to remove the arm base.

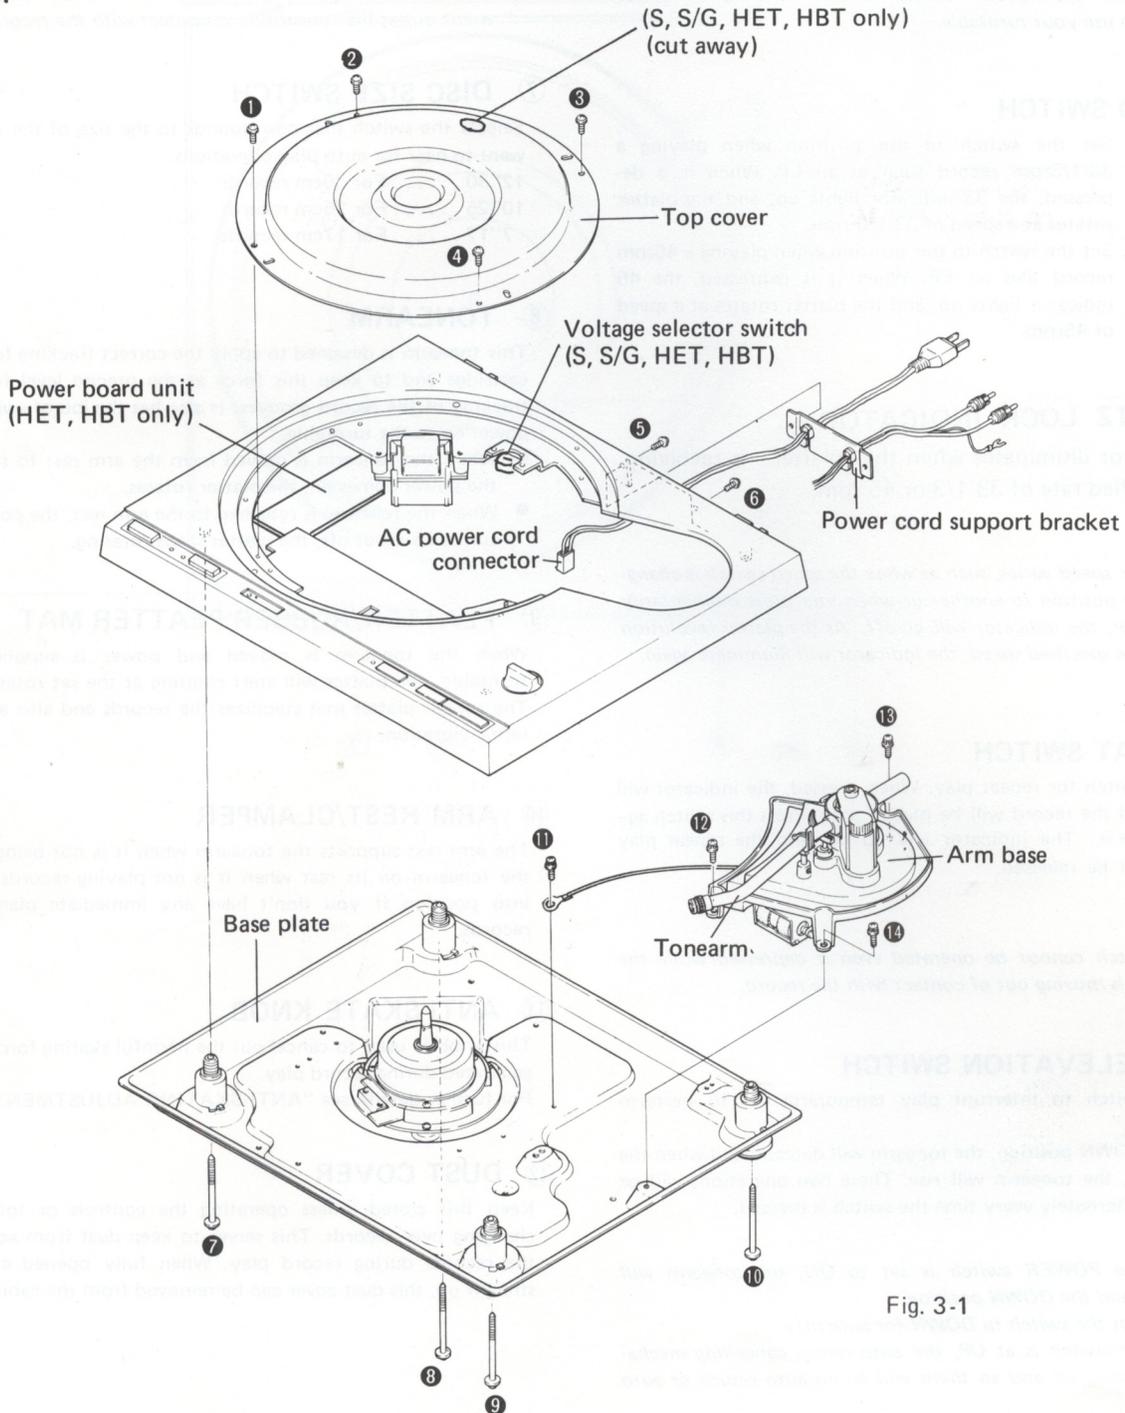

Fig. 3-1

3.2 TONEARM

1. Undo screw ① to remove the AS cam, AS spring washer, luminar washer, and the AS knob.
2. Disconnect the tonearm lead wires with a soldering iron.
3. Undo screw ② to remove the arm base board ass'y.
4. Undo screws ③ to ④ to remove the driver (F) ass'y.
5. Undo screw ⑤ to remove the arm stopper, and screw ⑥ to remove the PU plate.
6. Finally remove the tonearm by undoing screws ⑦ and ⑧.

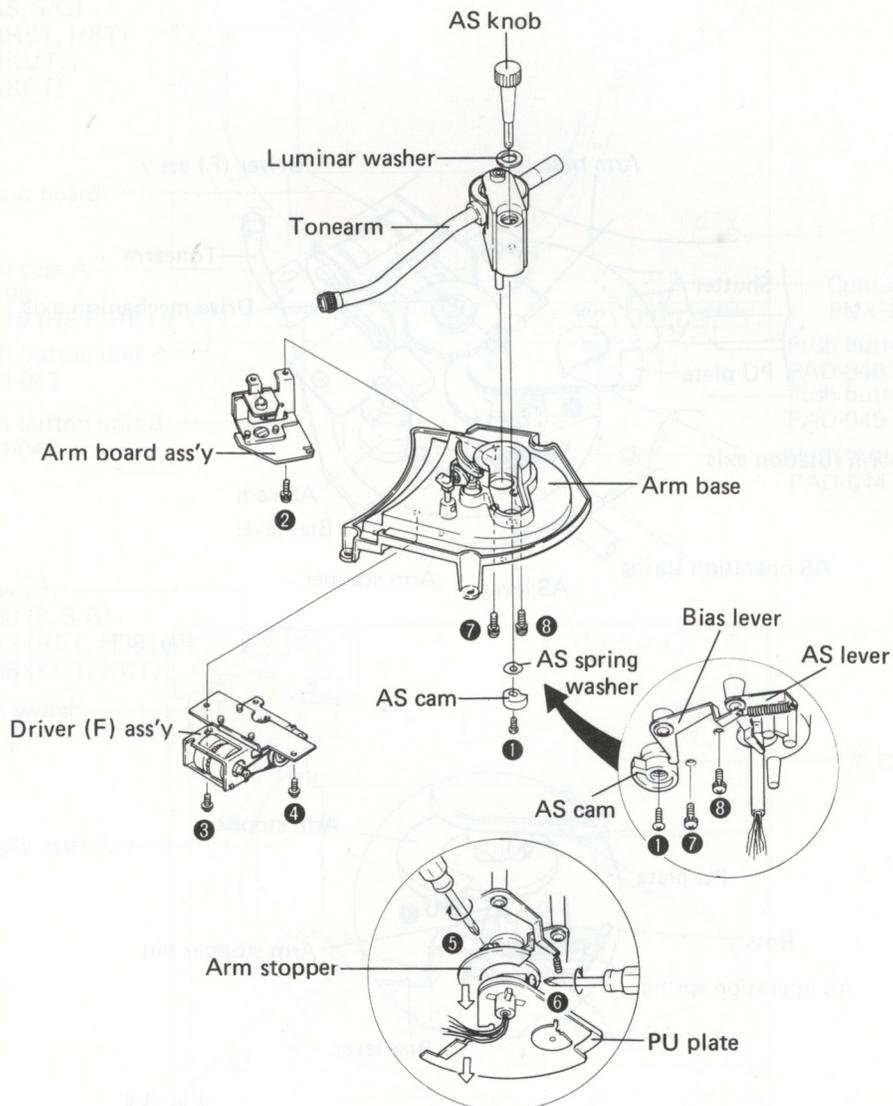

Fig. 3-2

3.3 REMOUNTING THE TONEARM

The tonearm is to be remounted in the reverse order of the disassembly process, taking particular note of the following points.

1. When securing the PU plate with screw (1), note that part A of the PU plate should be at right angles to the line connecting the tonearm rotation axis to the drive mechanism axis.
2. Adjust the AS knob to "0", and bring the bias lever into contact with the smallest diameter of the AS cam before securing the cam with screw (2).

3. When securing the arm stopper with screw (3) make sure that the arm stopper pin is aligned with the boss of part (B).

Note:

The arm base in the above diagram is viewed from below. Certain parts have been omitted to make the structure easier to understand.

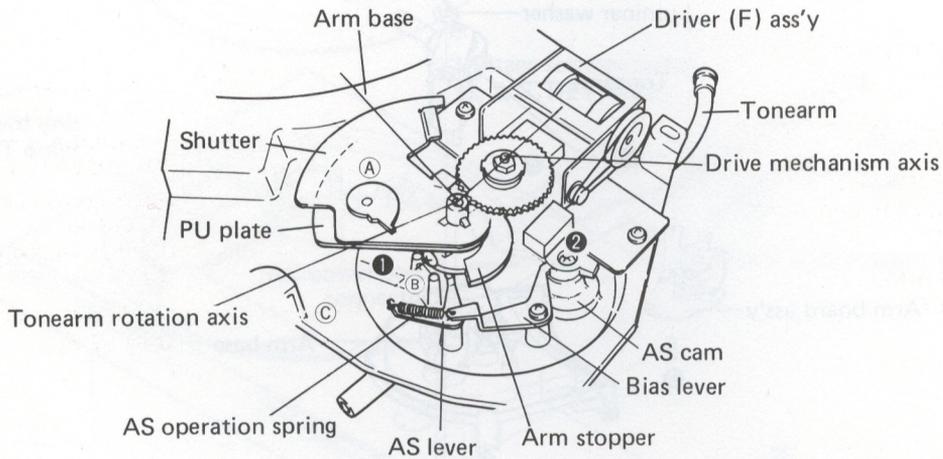

Fig. 3-3

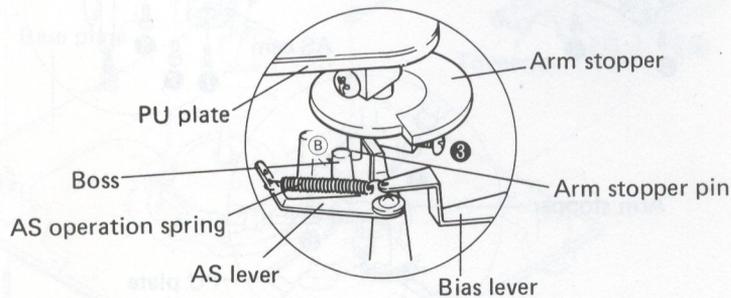

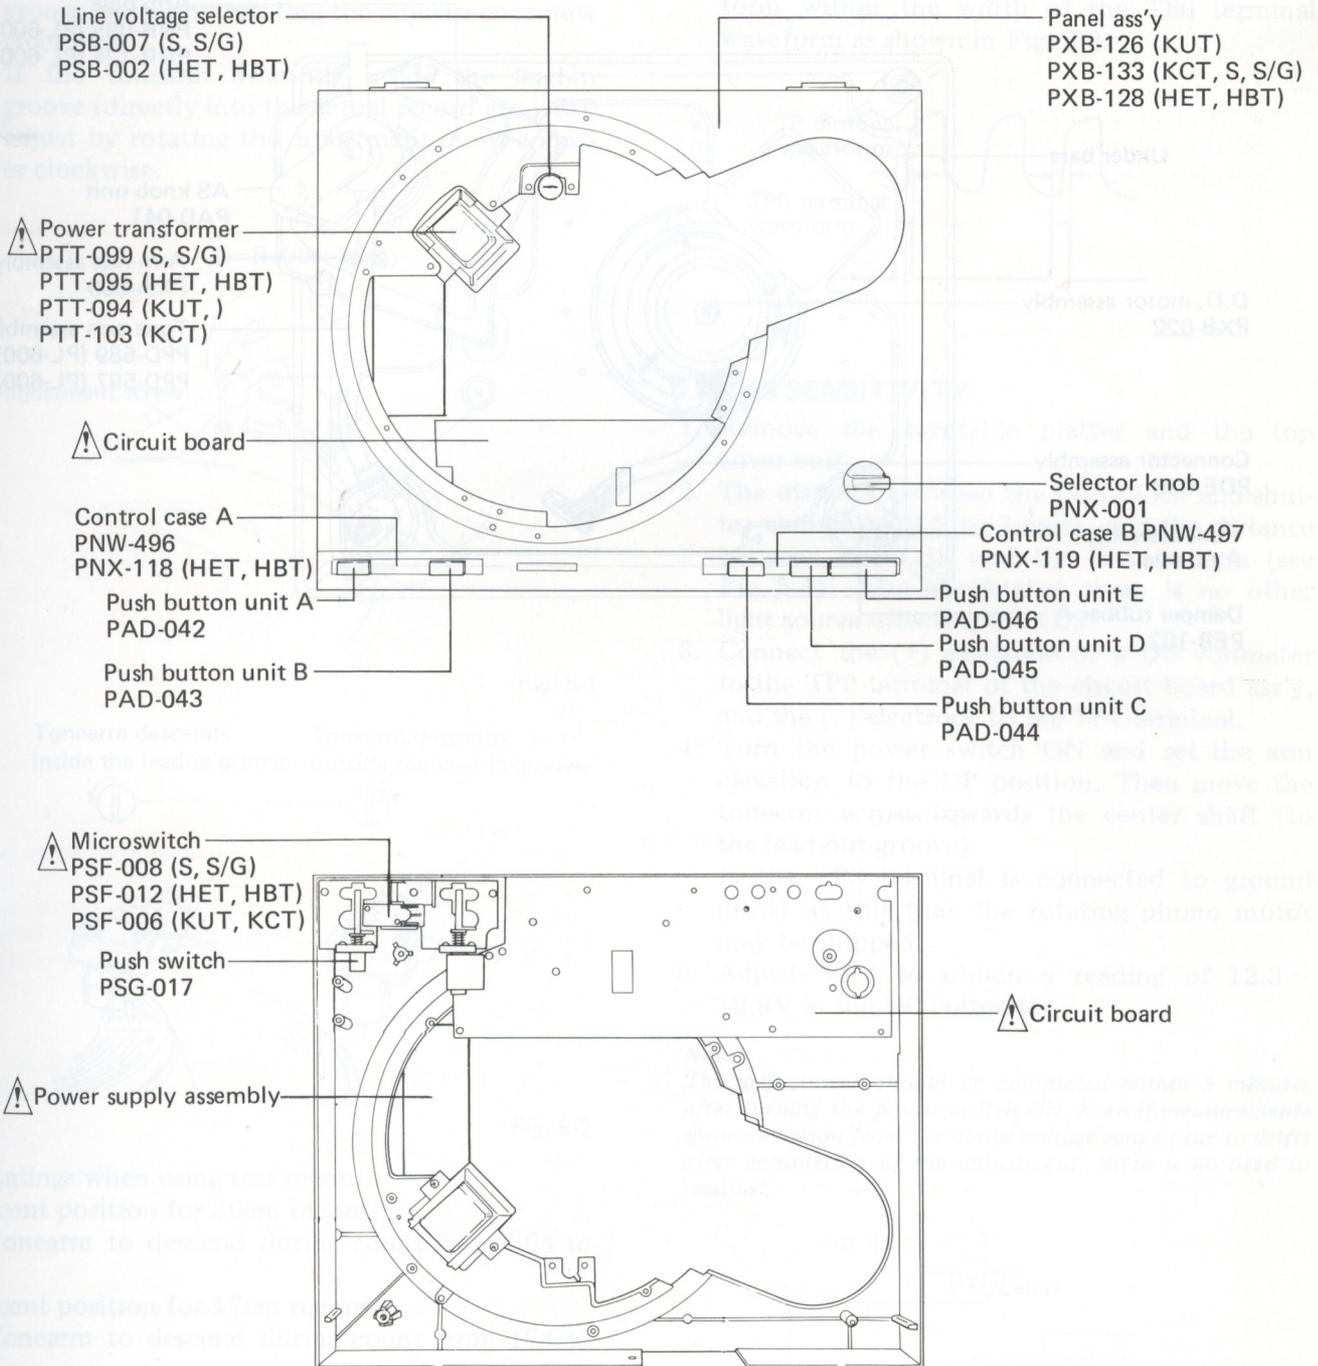

Fig. 3-4

4. PARTS LOCATION

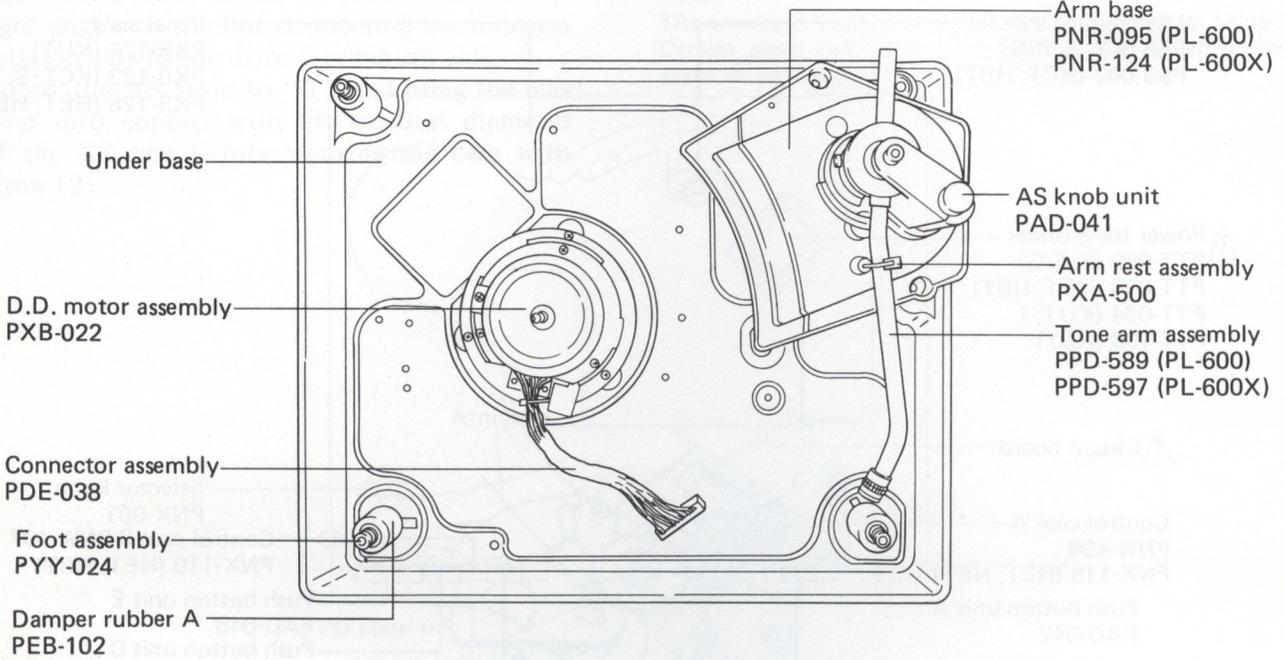

- The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

5.2 DO MOTOR OPERATION ADJUSTMENT

1. Rotate the turntable platter
2. Connect a dual-trace oscilloscope (or synchroscope) to the TP5 and TP6 terminals of the circuit board ass'y.

A PARTS LOCATION

5. ADJUSTMENT

5.1 STYLUS DESCENT POSITION

1. Extract the rubber bush (see Fig. 5-1).
2. If the tonearm descends outside the lead-in groove, adjust by rotating the adjustment screw clockwise.
3. If the tonearm descends inside the lead-in groove (directly into the actual record grooves), adjust by rotating the adjustment screw counter-clockwise.

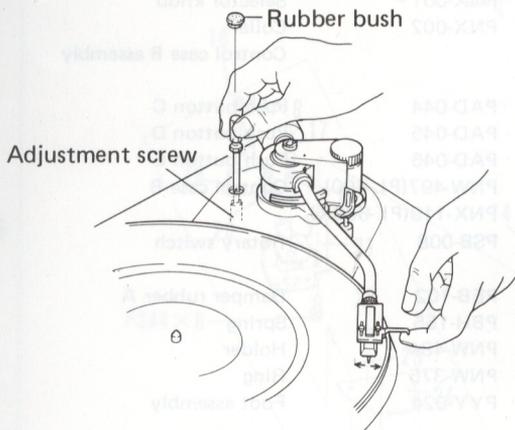

Fig. 5-1

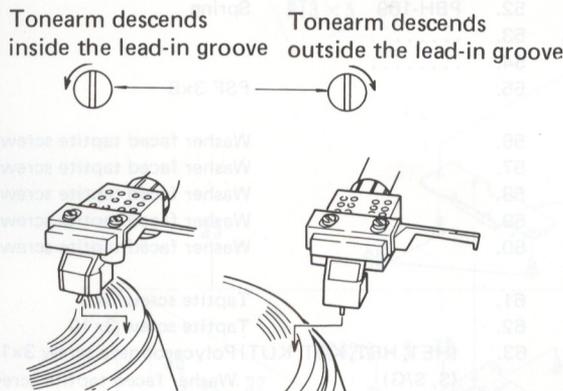

Fig. 5-2

Ratings when using test record.

Descent position for 30cm record:—

Tonearm to descend during count from 304 to 316

Descent position for 17cm record:—

Tonearm to descend during count from 174 to 185.

5.2 DD MOTOR OPERATION ADJUSTMENT

1. Rotate the turntable platter.
2. Connect a dual-image oscilloscope (or synchroscope) to the TP5 and TP6 terminals of the circuit board ass'y.

3. Adjust VR1 (for 33-1/3 rpm) and VR2 (for 45rpm) on the circuit board ass'y in order to bring the rising edge of the TP5 terminal waveform within the width of the TP6 terminal waveform as shown in Fig. 5-3.

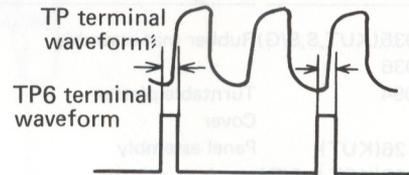

Fig. 5-3

5.3 CdS SENSITIVITY

1. Remove the turntable platter and the top cover unit.
2. The distance between the CdS block and shutter should be 2.5 to 3.5mm, and the distance between the CdS and the lamp 10mm (see Fig. 5-4). Also check that there is no other light source effecting the CdS.
3. Connect the (+) electrode of a DC voltmeter to the TP2 terminal of the circuit board ass'y, and the (-) electrode to the TP4 terminal.
4. Turn the power switch ON and set the arm elevation to the UP position. Then move the tonearm across towards the center shaft (to the lead-out groove).
If the TP3 terminal is connected to ground (TP4) at this time the rotating phono motor may be stopped.
5. Adjust VR3 to obtain a reading of 12.3 ~ 12.9V in the DC voltmeter.

Note:

This adjustment should be completed within 3 minutes after turning the power switch ON. Even if measurements show deviation from the above voltage range (due to drift) after completion of the adjustment, there is no need to readjust.

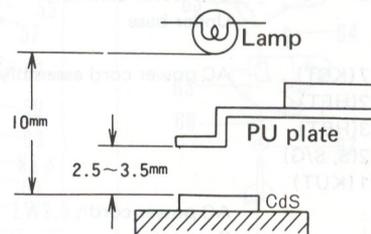

Fig. 5-4

6. EXPLODED VIEW AND PARTS LIST

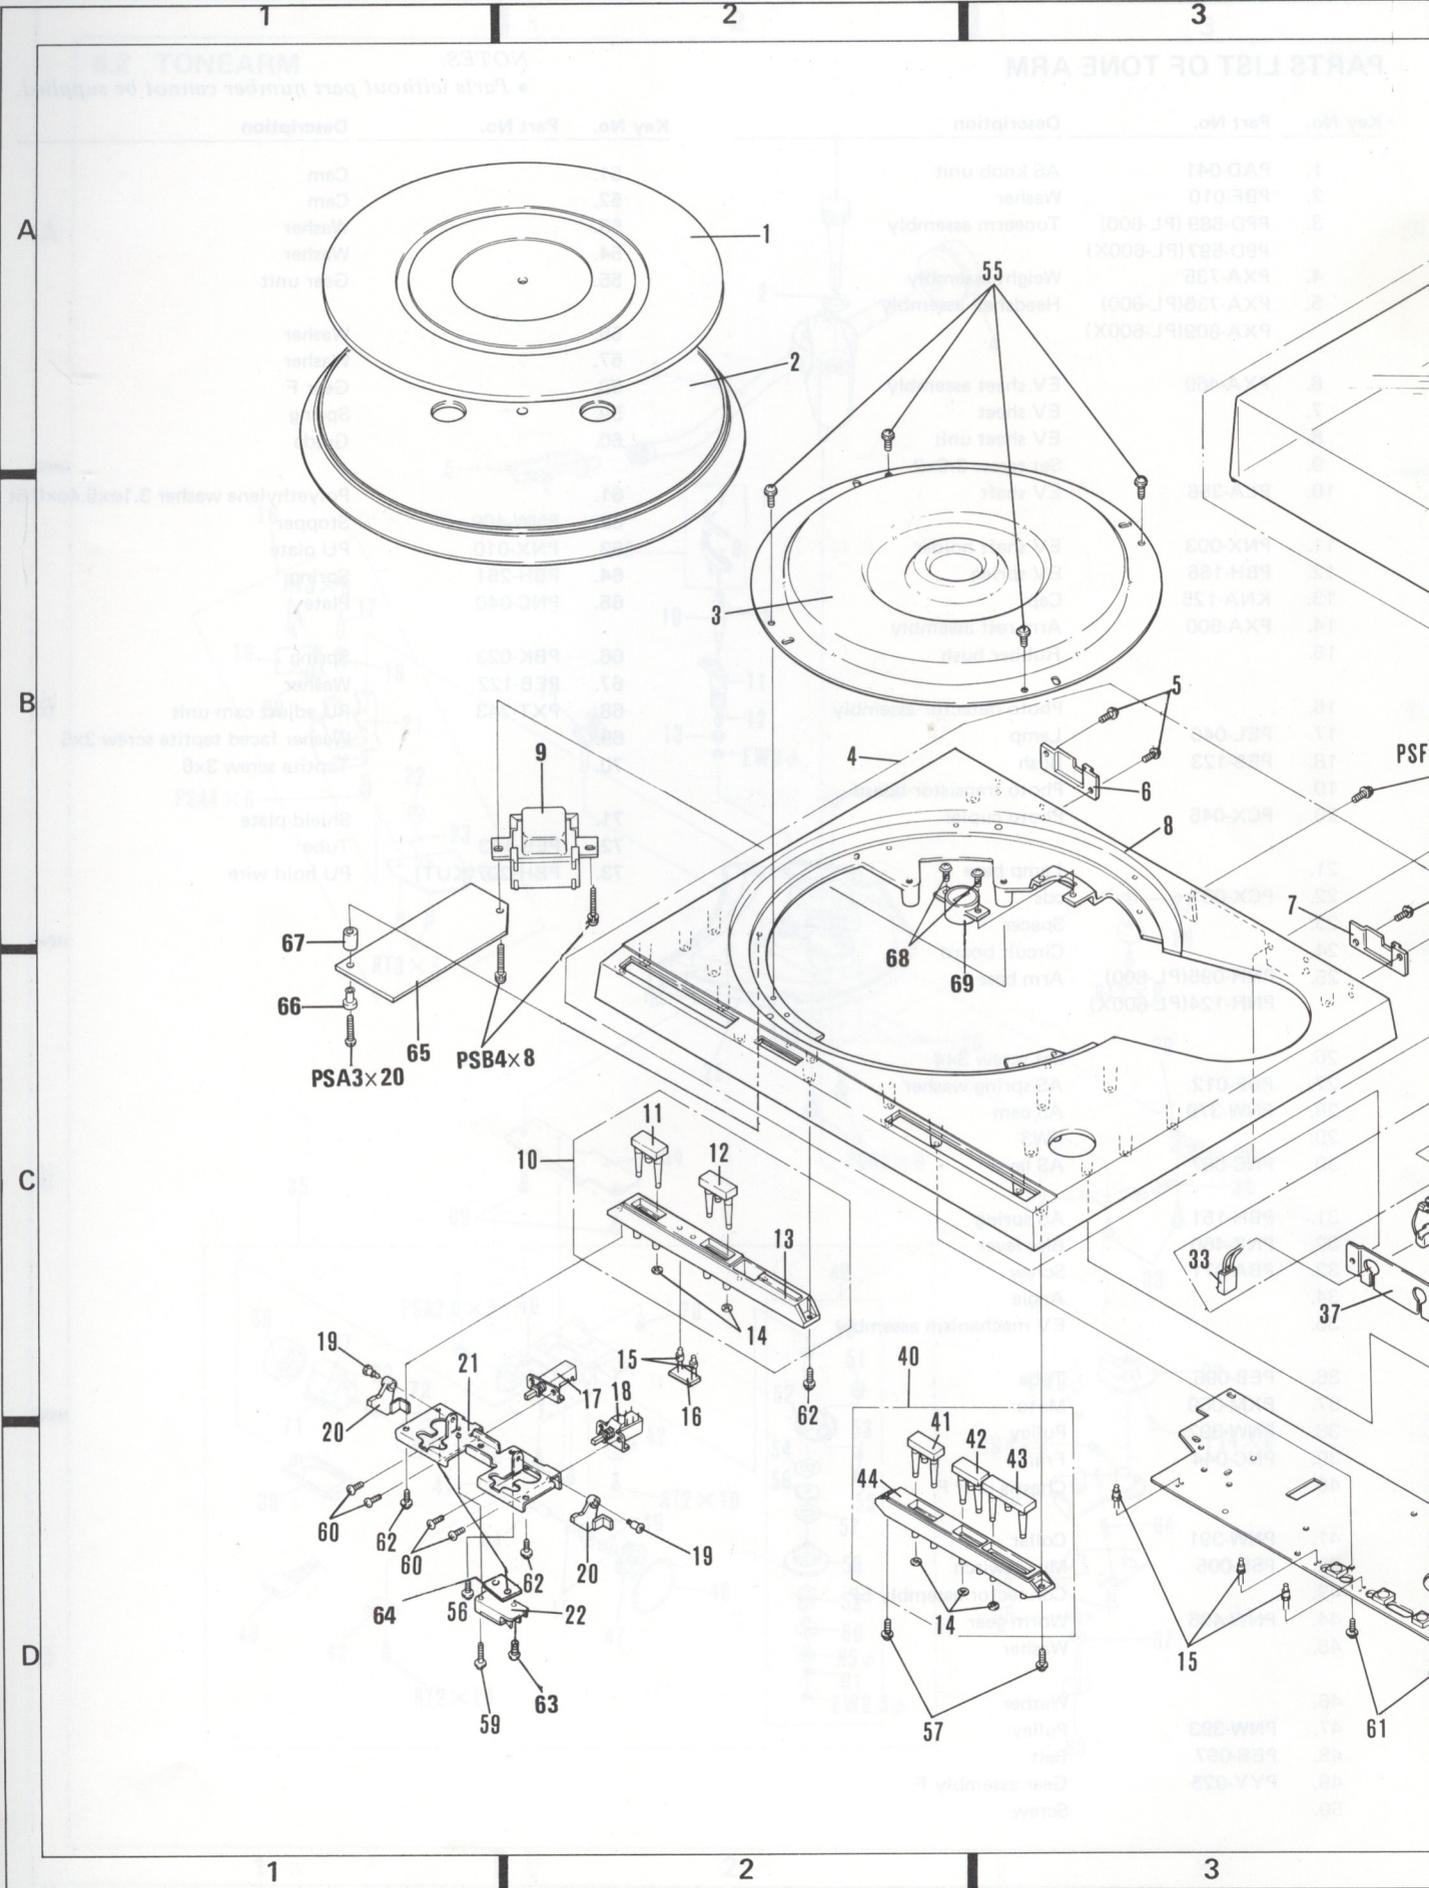

NOTES:

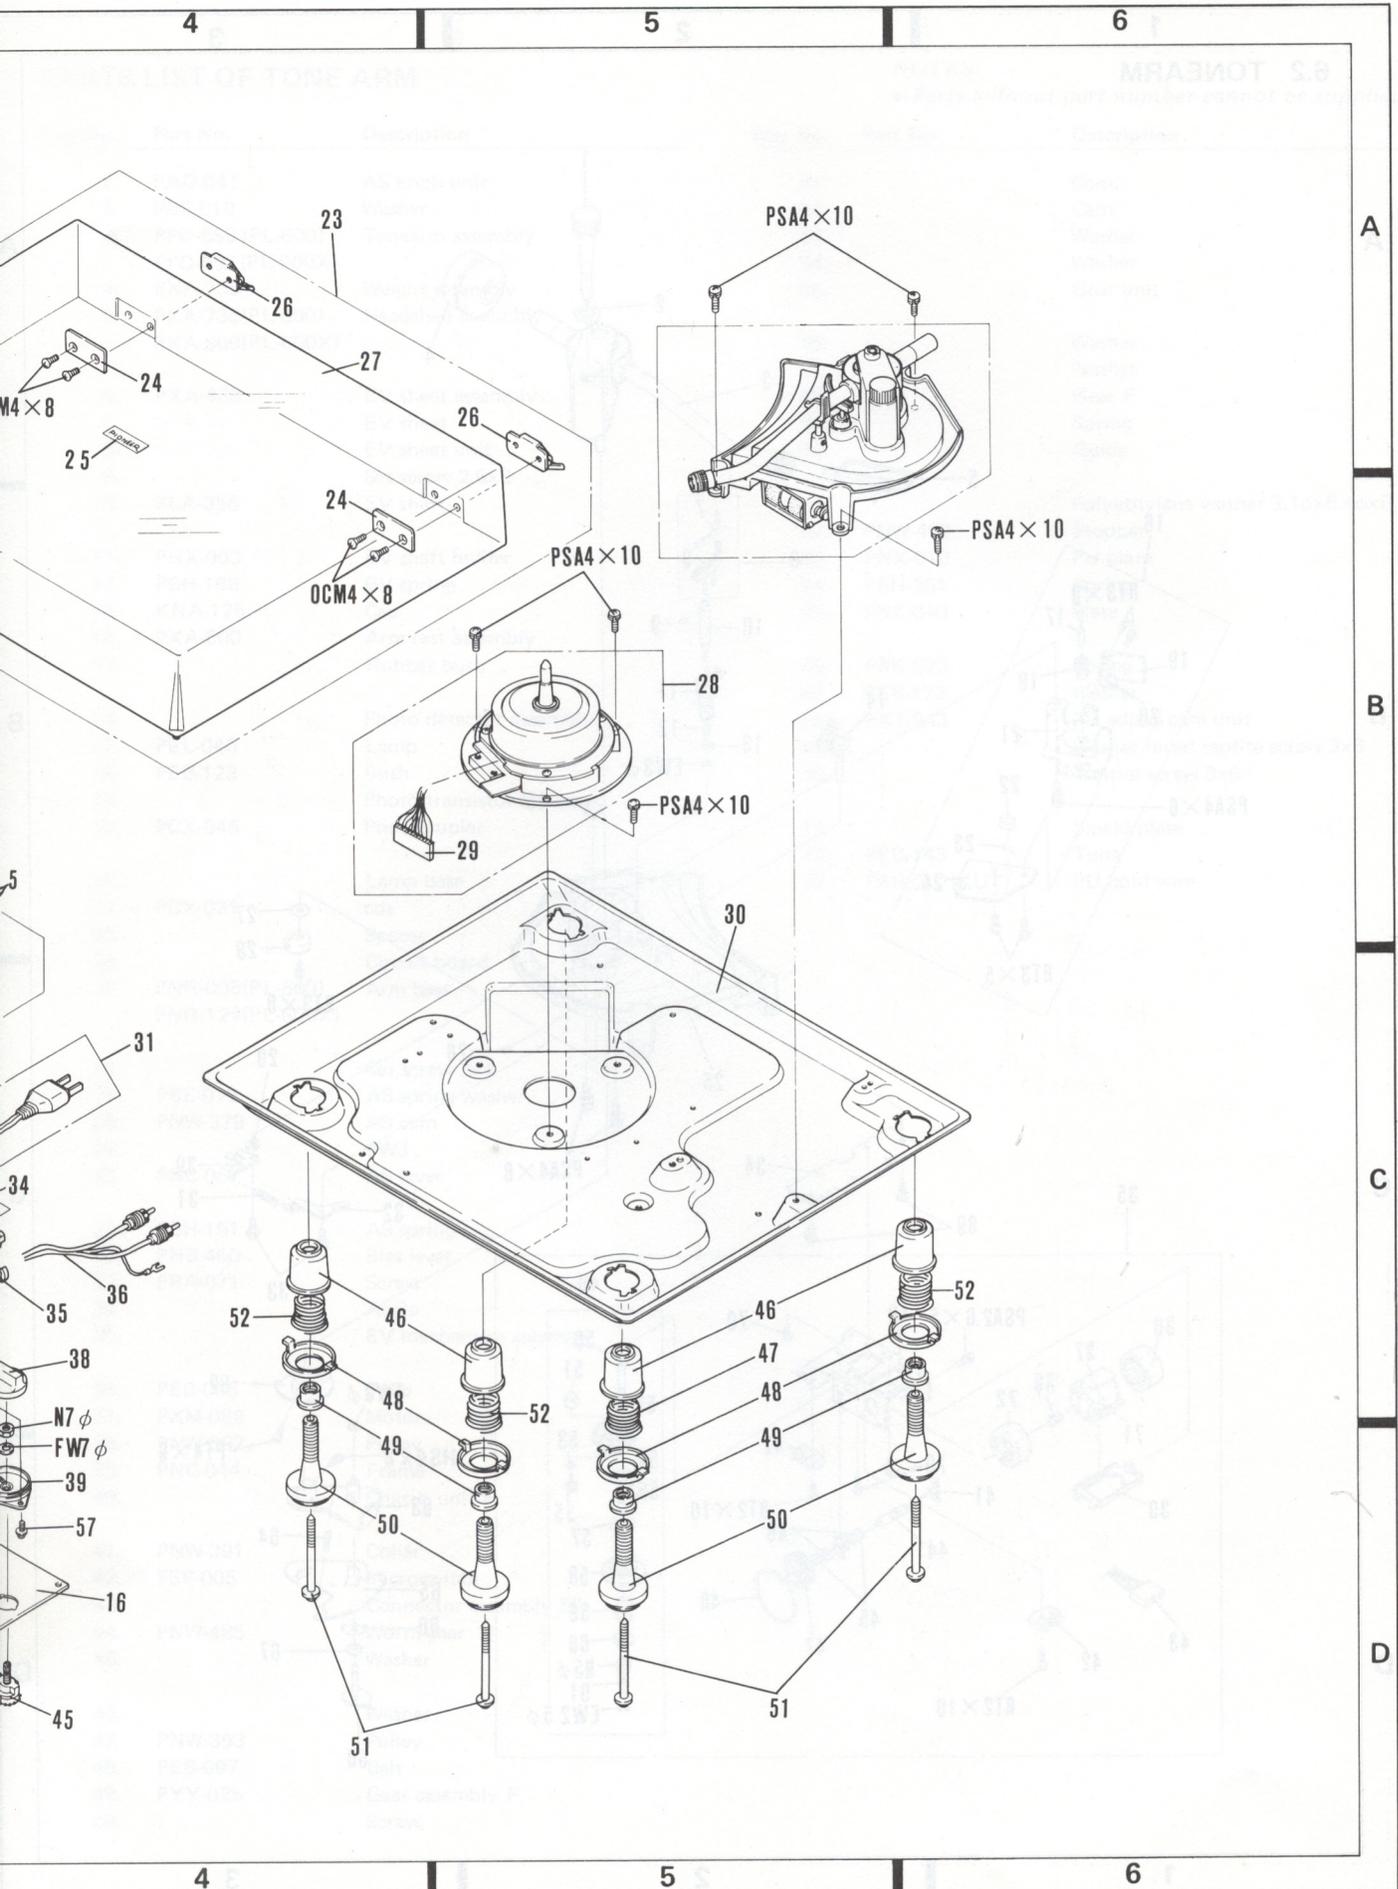

- Parts without part number cannot be supplied.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

7. SCHEMATIC DIAGRAM (KCT, KUT)

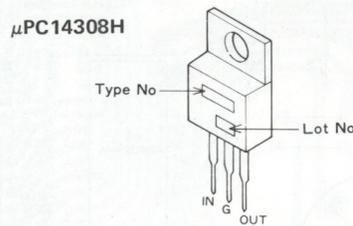

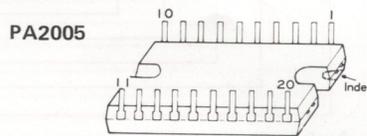

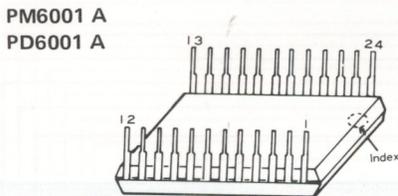

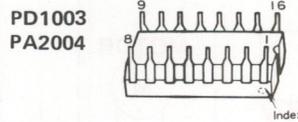

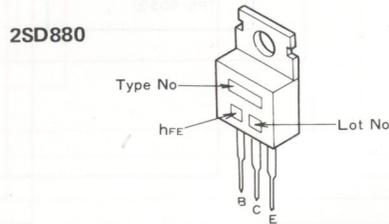

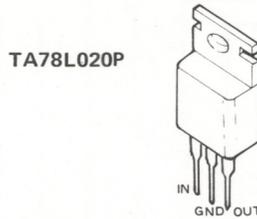

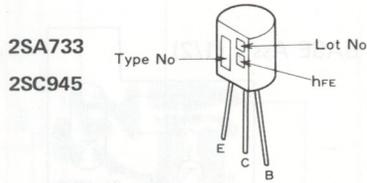

7

8

9

Appearance of Transistors and ICs

NOTES:

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω	56 × 10 ¹	561	RD¼PS	561J
47kΩ	47 × 10 ³	473	RD¼PS	473J
0.5Ω	0R5		RN2H	0R5K
1Ω	010		RSIP	010K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ	562 × 10 ¹	5621	RN¼SR	5621F
--------	-----------------------	------	-------	-------

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

13.	PXA-736	Headshell assembly

10. SCHEMATIC DIAGRAM(S, S/G)

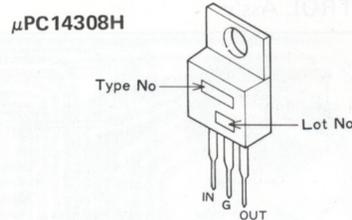

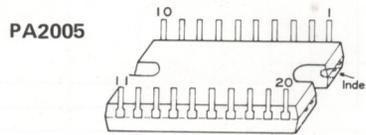

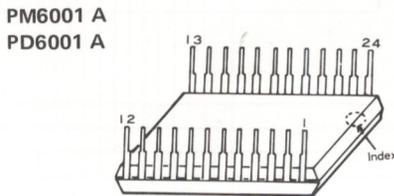

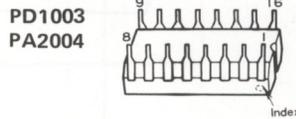

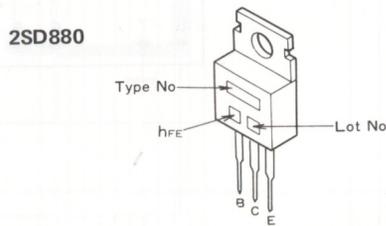

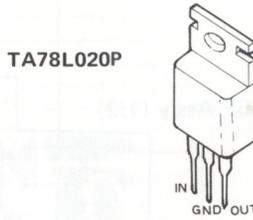

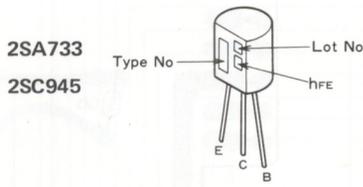

7

8

9

Appearance of Transistors and ICs

NOTES:

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω	56 × 10 ¹	561	RD¼PS	561J
47kΩ	47 × 10 ³	473	RD¼PS	473J
0.5Ω	0R5		RN2H	0R5K
1Ω	010		RSIP	010K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ	562 × 10 ¹	5621	RN¼SR	5621F
--------	-----------------------	------	-------	-------

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

13. SCHEMATIC DIAGRAM (HET, HBT)

POWER SUPPLY CIRCUIT FOR U-K MODEL

- LED P.C.B. Assy**
- RESISTORS:**
Indicated in Ω , $\frac{1}{4}W$, $\pm 5\%$ tolerance unless otherwise noted k : k Ω , M : M Ω , (F) : $\pm 1\%$, (G) : $\pm 2\%$, (K) : $\pm 10\%$ tolerance
 - CAPACITORS:**
Indicated in capacity (μF)/voltage (V) unless otherwise noted p : pF
Indication without voltage is 50V except electrolytic capacitor.
 - VOLTAGE**
□ : DC voltage (V) at no input signal
 - OTHERS:**
⊗ : Adjusting point.
The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.
- SWITCHES:**
- SW1: START/STOP ON — OFF
 SW2: UP/DOWN ON — OFF
 SW3: REPEAT ON — OFF
 SW4: SIZE SELECTOR 30cm — 25cm — 17cm
 SW5: SPEED SELECTOR 45rpm — 33 1/3rpm
 SW6: POWER ON — OFF
 SW7: MICRO ON — OFF
 SW8: MICRO ON — OFF
- The underlined indicates the switch position.
