ARP-099-0**

STEREO TUNER

TX-130L

MODEL TX-130L COMES IN TWO VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Voltage	Remarks
HE	220V and 240V	Europe model
HB	220V and 240V	U.K. model

- This service manual is applicable to the HE, HB types.
- Ce manuel d'instruction se réfère au mode de réglage, en français.
- Este manual de servicio trata del método de ajuste escrito en español.

AJUSTE	18

Change of Line Voltage

Line voltage can be changed with following steps.

1. Disconnect the AC power cord.
2. Remove the Top cover.
3. Change the connection wire (for power transformer) of terminal No. 12 and terminal No. 11 of Switch assembly A as follows:

Voltage	Terminal No. 12	Terminal No. 11
220V	Green wire	Blue wire
240V	Blue wire	Green wire

4. Stick the line voltage label on the rear panel.

Part No.	Description
AAX-193	220V label
AAX-192	240V label

FM Tuner Section

Usable Sensitivity	10.8 dBf (1.9 μ V)
50 dB Quieting Sensitivity	Mono; 17.3 dBf (4.0 μ V)
	Stereo; 39.2 dBf (50 μ V)
Sensitivity (DIN)	Mono; 0.85 μ V
	Stereo; 39.8 μ V
Signal-to-Noise Ratio (at 80 dBf)	Mono; 75 dB
	Stereo; 70 dB
Signal-to-Noise Ratio (DIN)	Mono; 72 dB
	Stereo; 70 dB
Distortion (at 60 dBf)	
Stereo	1 kHz; 0.2%
Distortion (DIN)	
Stereo	1 kHz; 0.2%
Capture Ratio	1.0 dB
Alternate Channel Selectivity	60 dB
Stereo Separation	1 kHz; 40 dB
Frequency Response	30 Hz to 15 kHz $\pm 1 \frac{1}{2}$ dB
Spurious Response Ratio	70 dB
Image Response Ratio	55 dB
IF Response Ratio	80 dB
AM Suppression Ratio	50 dB
Muting Threshold	19.2 dBf (5 μ V)
Antenna Input	300 ohms balanced, 75 ohms unbalanced

LW Tuner Section

Sensitivity	
IHF, external antenna	45 μ V
Selectivity	25 dB
Signal-to-Noise Ratio	50 dB
Image Response Ratio	40 dB
IF Response Ratio	70 dB
Antenna	Accessory AM loop antenna

MW Tuner Section

Sensitivity	
IHF, external antenna	30 μ V
Selectivity	25 dB
Signal-to-Noise Ratio	50 dB
Image Response Ratio	40 dB
IF Response Ratio	70 dB
Antenna	Accessory AM loop antenna

Audio Section

FM (100% MOD)	650 mV/3.5 k Ω
AM (30% MOD)	200 mV/3.5 k Ω

Miscellaneous

Power Requirements	AC220V/240V, 50/60Hz
	(Switchable)
Power Consumption	9.5 W
Dimensions	420 (W) x 69 (H) x 226 (D) mm
	16-1/2 (W) x 2-3/4 (H) x 8-7/8 (D) in
Weight (without package)	2.5 kg (5 lb 8 oz)

Furnished Parts

FM T-type Antenna	1
AM Antenna	1
Antenna Catcher	1
Connection Cord with Pin Plugs	1
Operating Instructions	1

NOTE:

Specifications and design subject to possible modification without notice.

2. FRONT PANEL FACILITIES

① POWER SWITCH (POWER)

When this switch is set to the ON position, power is supplied to the tuner's main circuits. The unit's power switch is geared to selecting the transformer's secondary and so even at the STAND-BY position, the unit's circuitry will work as long as the power cord is connected to the power outlet. Disconnect the power cord from the AC power outlet when the unit is not in regular use.

② TUNING INDICATOR (TUNING)

This indicates that an FM, MW or LW broadcasting station is being received.

③ STEREO INDICATOR (STEREO)

This lights automatically when an FM program is being broadcast in stereo.

It does not light when the FM MUTING switch has been set to the OFF/MONO position.

④ FM MUTING SWITCH (FM MUTING)

In the released position when it is normally set, this switch suppresses the annoying interstation noise which is heard when tuning in FM broadcasting stations.

If the station signals are weak and there is a great deal of noise and distortion, depress this switch (and monaural sound reproduction results).

This switch does not work with MW and LW reception.

⑤ TUNING KNOB

Rotate this knob to pick up the stations (FM, MW or LW).

⑥ FUNCTION SWITCHES (FM, MW or LW)

Depress the FM switch for listening to FM broadcasts.
Depress the MW switch for listening to MW broadcasts.
Depress the LW switch for listening to LW broadcasts.

⑦ FREQUENCY SCALE

This indicates the frequency of the broadcasting station (FM, MW and LW).

The top level figures (88~108) indicate the FM frequencies.
The center level figures (55~160) indicate the MW frequencies.

The bottom level figures (150~350) indicate the LW frequencies.

⑧ OUTPUT CORD (accessory)

This is used to hook the unit up with the stereo amplifier.

⑨ T-TYPE FM ANTENNA (accessory)

This antenna is for listening to FM stations and it should be connected to the rear panel of the unit.

This is a spare antenna for listening to FM stations and is used until an outdoor FM antenna is erected. For the best reception, an outdoor antenna should be obtained.

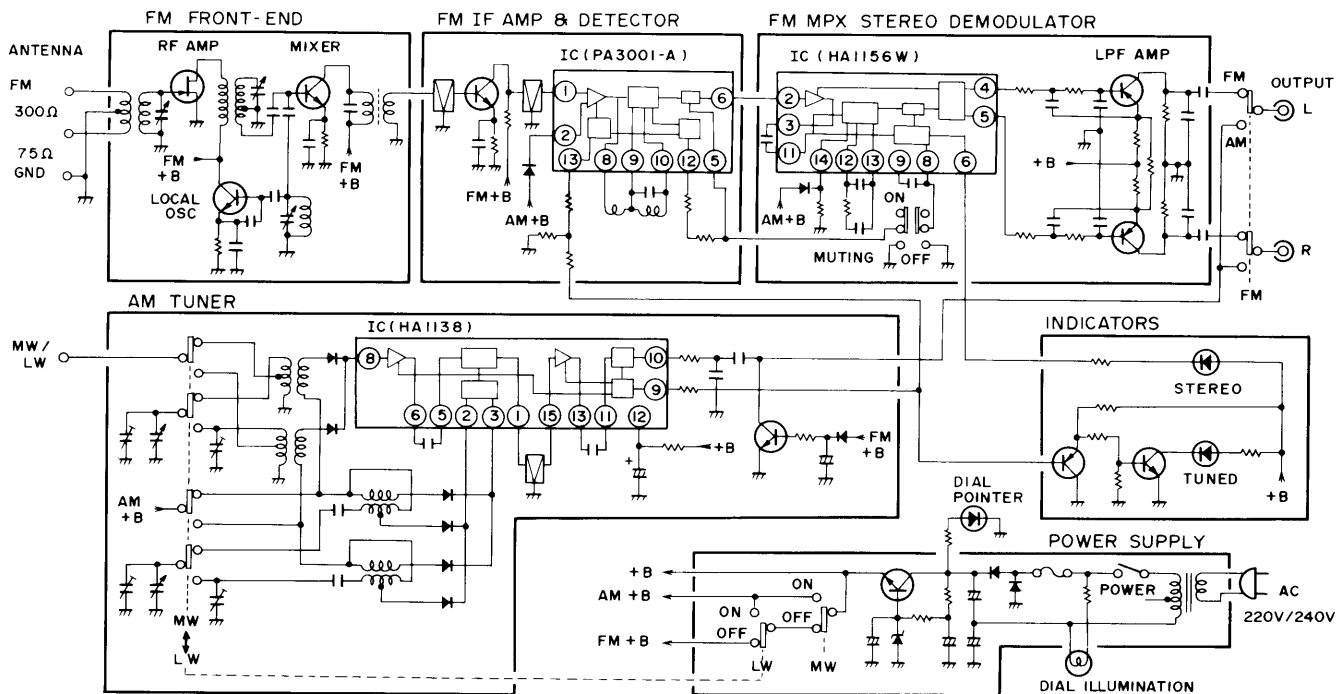

⑩ AM ANTENNA AND ANTENNA CATCHER (accessory)

This antenna is for listening to MW and LW stations and it should be connected to the rear panel of the unit. The antenna catcher is used when fixing the antenna to a wall or other location.

NOTE:

Even with the accessory T-type FM antenna and AM antenna it may be impossible to tune into some stations when the broadcast stations are too far away or when the unit is located in a weak-signal area such as in the mountains. In cases like this, use an external antenna.

3. BLOCK DIAGRAM

4. CIRCUIT DESCRIPTIONS

FM Tuner

The FM front end is comprised of a J-FET (2SK168) single-stage RF amplifier, and NPN transistor mixer, and an NPN transistor modified Clapp local oscillator.

The IF stage consists of 2 dual-element ceramic filters, a single transistor amplifier element, and IF system IC (PA3001-A) which incorporates the IF limiter amplifier, FM detector, and the FM muting circuit.

FM Multiplex Stereo Decoder

The stereo decoder stage employs an FM MPX IC (HA1156W-P), while the subcarrier signals (frequencies above 19kHz) are removed by an -18dB/oct. active filter consisting of a PNP transistor. This active filter also serves as an amplifier for frequencies within its passband, and eliminates crosstalk.

AM Tuner

The AM tuner is two wave-band tuner with LW (150kHz~350kHz) and MW (525kHz~1605kHz). This employs a 2-ganged tuning capacitor, a single element ceramic filter, and an IC (HA1138) consisting of an RF amplifier, mixer, 2-stage IF amplifier, detector and AGC circuit.

5. PARTS LOCATION

NOTES:

- Parts without part number cannot be supplied.
 - The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - For your Parts Stock Control, the fast moving items are indicated with the marks ★★ and ★.
- ★★ **GENERALLY MOVES FASTER THAN ★**.
 This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

1. RESISTORS:
 Indicated in Ω , $\frac{1}{2}W$, $\pm 5\%$ tolerance unless otherwise noted k: k Ω , M: M Ω , (F): $\pm 1\%$, (G): $\pm 2\%$, (K): $\pm 10\%$, (M): $\pm 20\%$ tolerance

2. CAPACITORS:
 Indicated in capacity (μF)/voltage (V) unless otherwise noted p: pF
 Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE
 : DC voltage (V) at no input signal
 : Signal voltage at FM 400Hz 75kHz DEV.

4. OTHERS:
 : Adjusting point.
 The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

SWITCHES:

S1 : POWER	ON - OFF
S2-1 : FUNCTION LW	ON - OFF
S2-2 : FUNCTION MW	ON - OFF
S2-3 : FUNCTION FM	ON - OFF
S3 : MUTING / MODE	ON/AUTO - OFF/MONO
S4 : BAND SELECTOR	LW - MW

The underlined indicates the switch position.

9. ELECTRICAL PARTS LIST

NOTES:

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω 56 × 10¹ 561 RD¼PS 561J
 47kΩ 47 × 10³ 473 RD¼PS 473J
 0.5Ω 0R5 RN2H 0R5K
 1Ω 010 RS1P 010K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ 562 × 100 5621 RN¼SR 5621F

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks **★★** and **★**.
★★ GENERALLY MOVES FASTER THAN ★.
 This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

11. DIAL CORD STRINGING

1. Remove the top cover.
2. Remove the tuning drum from the shaft of the tuning capacitor.
3. Tie one end of the cord to the stud A located inside the tuning drum.
4. Rotate the tuning capacitor right around until the rotor blades are fully intermeshed.
5. Secure the tuning drum back onto the tuning capacitor shaft, making sure that the securing screw faces directly upward.
6. Pass the cord out through the small opening in the circumference of the tuning drum (see diagram), and then take it over pulleys B and C in that sequence.
7. Wind the cord around the tuning shaft 3 times.
8. Pass it over pulley D, wind it around the tuning drum 2 times, and finally tie it to the spring hook F so that it is tensioned.
9. Turn the tuning shaft, and check that the cord moves smoothly.
10. Cut off any excess cord.
11. Turn the tuning shaft counter-clockwise as far as it will go.
12. Align the dial pointer with the starting point of the dial scale, and then pass the cord over it.
13. Check that the dial pointer is in line with the starting point of the dial scale.
14. Finally apply the locking paint to the cord securing positions (stud A and spring hook F) and the dial pointer connection.

12. ADJUSTMENTS

FM Tuner Section

- Check that the dial pointer indicates a starting point.
- Connect the SIGNAL meter between terminal no. 5 of tuner ass'y and the ground.
- Connect the TUNING meter between terminals no. 1 and no. 2 of tuner ass'y.
- Set the FM switch to ON and the FM MUTING switch to OFF.

Step	FM SG (400Hz, ± 75 kHz deviation)		Position of dial pointer	Adjustment point	Adjustment procedure
	Frequency	Level			
1	106MHz	106dB	106MHz	TC3	Set the TUNING meter to the center position and the SIGNAL meter to the maximum value.
2	90MHz	106dB	90MHz	VC3 (Fig. 12-1)	
3	Repeat steps 1 to 2.				
4	98MHz	18dB	98MHz	TC1 TC2, T1	Set the SIGNAL meter to the maximum value.
5	No signal		White noise	T2	Set the TUNING meter to the center position.
6	Turn ON the FM MUTING switch.				
7	98MHz	25~35dB Variable	98MHz	R104	Remove R104 when muting operation stops above 30dB.
8	98MHz Not modulated	86dB	98MHz	VR1	Set the signal of the terminal no. 10 to 19kHz (± 100 Hz).
9	98MHz Stereo modulation	86dB	98MHz	T1 (within $\pm 90^\circ$)	Minimize the distortion of the OUTPUT terminal signal.

NOTE:

Connect the MPX SG to the FM SG external modulator terminal and set the modulation to Main (1kHz, L+R) ± 67.5 kHz deviation, Pilot (19kHz) ± 7.5 kHz deviation.

AM Tuner Section

- Check that the dial pointer indicates a starting point.
- Turn ON the MW switch.
- Connect the SIGNAL meter between the terminal no. 5 of tuner ass'y and the ground.

Step	AM SG (400Hz, 30% modulation)		Position of dial pointer	Adjustment point	Adjustment procedure	
	Frequency	Level				
1	1400kHz	100dB	1400kHz	TC5	Set the output of the OUTPUT terminal to the maximum value.	
2	600kHz	100dB	600kHz	T4		
3	Repeat steps 1 to 2.					
4	1400kHz	30dB	1400kHz	TC4		
5	600kHz	30dB	600kHz	T3		
6	Repeat steps 4 to 5.					

Long Wave Section

- Set the AM BAND switch to the LW position.

Step	AM SG (400Hz, 30% modulation)		Position of dial pointer	Adjustment point	Adjustment procedure
	Frequency	Level			
1	340kHz	100dB	340kHz	TC6	Adjust until demodulated signal at OUTPUT terminal is maximum.
2	160kHz	100dB	160kHz	T5	
3	Set the AM SG to 30dB output level, repeat steps 1 to 2 above.				
4	340kHz	50dB	340kHz	TC7	Adjust until demodulated signal at OUTPUT terminal is maximum.
5	160kHz	50dB	160kHz	T6	
6	Repeat steps 4 to 5 until maximum sensitivity is attained.				

Fig. 12-1 Adjustment of tuning capacitor

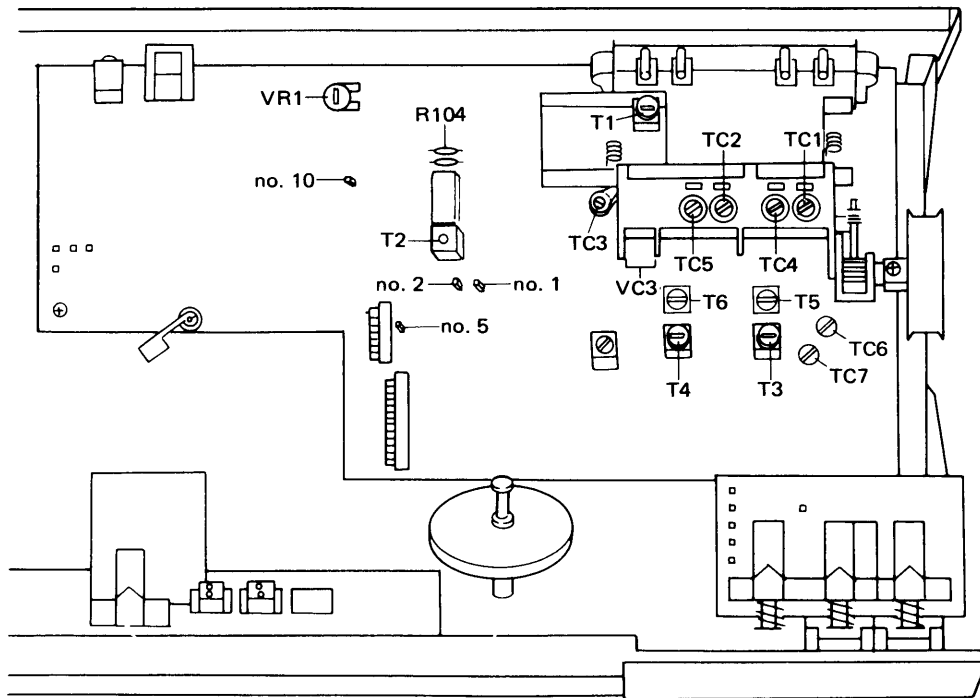

Fig. 12-2 Adjustment points

12. RÉGLAGE

Section tuner FM

- Vérifier que l'aiguille se trouve sur la position de départ.
- Brancher le S-mètre (SIGNAL) entre la borne n° 5 du tuner et la masse.
- Brancher l'indicateur d'accord (TUNING) entre la borne n° 1 et la borne n° 2 du tuner.
- Déplacer l'interrupteur FM sur la position ON, et le sélecteur de réglage silencieux FM (FM MUTING) sur la position OFF.

Etape	FM SG (400Hz, déviation ±75kHz)		Position de l'aiguille	Point de réglage	Procédure de réglage
	Fréquence	Niveau			
1	106MHz	106dB	106MHz	TC3	Déplacer l'indicateur d'accord sur la position centrale et régler le S-mètre (SIGNAL) à sa valeur maximum.
2	90MHz	106dB	90MHz	VC3 (Fig. 12-1)	
3	Répéter les étapes 1 et 2.				
4	98MHz	18dB	98MHz	TC1 TC2, T1	Régler le S-mètre (SIGNAL) à sa valeur maximum.
5	Pas de signal		Bruit blanc	T2	Déplacer l'indicateur d'accord sur la position centrale.
6	Déplacer le sélecteur de réglage silencieux FM (FM MUTING) sur la position ON.				
7	98MHz	25~35dB Variable	98MHz	R104	Enlever le R104 lorsque le réglage silencieux atteint 30dB.
8	98MHz N'est pas modulé	86dB	98MHz	VR1	Régler le signal de la borne n° 10 à 19kHz (±100Hz).
9	98MHz Modulation stéréo	86dB	98MHz	T1 (entre ±90°)	Régler au minimum la distortion du signal de la borne de sortie (OUTPUT).

NOTE:

Connecter le MPX SG à la borne du modulateur extérieur FM SG et régler la modulation Main (principale) sur une déviation de (1kHz, L+R) ±7,5kHz.

Section tuner AM

- Vérifier que l'aiguille se trouve sur la position de départ.
- Déplacer l'interrupteur MW sur la position ON.
- Brancher le S-mètre (SIGNAL) entre la borne n° 5 du tuner et la masse.

Etape	AM SG (400Hz, modulation de 30%)		Position de l'aiguille	Point de réglage	Procédure de réglage	
	Fréquence	Niveau				
1	1400kHz	100dB	1400kHz	TC5	Régler la sortie de la borne de sortie (OUTPUT) à sa valeur maximum.	
2	600kHz	100dB	600kHz	T4		
3	Répéter les étapes 1 et 2.					
4	1400kHz	30dB	1400kHz	TC4		
5	600kHz	30dB	600kHz	T3		
6	Répéter les étapes 4 et 5.					

Section grandes ondes

- Déplacer le sélecteur de gammes d'ondes sur la position LW (grandes ondes).

Etape	AM SG (400Hz, modulation de 30%)		Position de l'aiguille	Point de réglage	Procédure de réglage
	Fréquence	Niveau			
1	340kHz	100dB	340kHz	TC6	Régler jusqu'à ce que le signal de démodulation à la borne de sortie (OUTPUT) soit au maximum.
2	160kHz	100dB	160kHz	T5	
3	Régler le signal AM (AM SG) à un niveau de sortie de 30dB, puis, répéter les étapes 1 et 2 ci-dessus.				
4	160kHz	50dB	160kHz	TC7	Régler jusqu'à ce que le signal démodulé à la borne de sortie (OUTPUT) soit au maximum.
5	160kHz	50dB	160kHz	T6	
6	Répéter les étapes 4 et 5 jusqu'au point d'intensité maximum.

Fig. 12-2 Points de réglage

12. AJUSTE

Sección del sintonizador de FM

- Comprobar que el indicador del cuadrante señala un punto de inicio.
- Conectar el medidor de señal (SIGNAL) entre el terminal no. 5 del conjunto del sintonizador y tierra.
- Conectar el medidor de sintonización (TUNING) entre los terminales no. 1 y 2 del conjunto del sintonizador.
- Poner el selector de FM en la posición ON y el interruptor de silenciamiento en FM (FM MUTING) en la posición OFF.

Paso	FM SG (400Hz, ± 75 kHz de desviación)		Posición del indicador del cuadrante	Punto de ajuste	Procedimiento de ajuste
	Frecuencia	Nivel			
1	106MHz	106dB	106MHz	TC3	Poner el medidor de sintonización (TUNING) en la posición central y el medidor de señal (SIGNAL) en el valor máximo.
2	90MHz	106dB	90MHz	VC3 (Fig. 12-1)	
3	Repetir los pasos 1 al 2.				
4	98MHz	18dB	98MHz	TC1, TC2, T1	Ajustar el medidor de señal (SIGNAL) al valor máximo.
5	No hay señal		Ruido blanco	T2	Poner el medidor de sintonización (TUNING) en la posición central.
6	Poner en la posición ON el interruptor de silenciamiento en FM (FM MUTING).				
7	98MHz	25~35dB Variable	98MHz	R104	Extraer el R104 cuando la operación de silenciamiento se detiene por encima de los 30dB.
8	98MHz no modulada	86dB	98MHz	VR1	Ajustar la señal del terminal no. 10 a 19kHz (± 100 Hz).
9	98MHz Modulación estereofónica	86dB	98MHz	T1 (dentro de $\pm 90^\circ$)	Minimizar la distorsión de la señal del terminal de salida (OUTPUT).

NOTA:

Conectar el generador de señal de multiplex (MPX SG) al terminal de modulador exterior del generador de señal de FM (FM SG) y ajustar la modulación a Principal (1kHz, Izq. \pm Der.) $\pm 67,5$ kHz de desviación.

Sección del sintonizador de AM

- Comprobar que el indicador del cuadrante señale un punto de inicio.
- Poner en la posición ON el selector de MW.
- Conectar el medidor de señal (SIGNAL) entre el terminal no. 5 del conjunto del sintonizador y tierra.

Paso	AM SG (400Hz, 30% de modulación)		Posición del indicador del cuadrante	Punto de ajuste	Procedimiento de ajuste	
	Frecuencia	Nivel				
1	1400kHz	100dB	1400kHz	TC5	Ajustar la salida del terminal de salida (OUTPUT) al valor máximo.	
2	600kHz	100dB	600kHz	T4		
3	Repetir los pasos 1 y 2.					
4	1400kHz	30dB	1400kHz	TC4		
5	600kHz	30dB	600kHz	T3		
6	Repetir los pasos 4 y 5.					

Sección de onda larga

- Poner el selector de banda de AM (AM BAND) en la posición LW.

Paso	AM SG (400Hz, 30% de modulación)		Posición del indicador del cuadrante	Punto de ajuste	Procedimiento de ajuste
	Frecuencia	Nivel			
1	340kHz	100dB	340kHz	TC6	Ajustar hasta que la señal demodulada en el terminal de salida (OUTPUT) sea la máxima.
2	160kHz	100dB	160kHz	T5	
3	Ajustar el generador de señales de AM (AM SG) al nivel de salida de 30dB, y repetir los pasos 1 y 2 de arriba.				
4	340kHz	50dB	340kHz	TC7	Ajustar hasta que la señal demodulada en el terminal de salida (OUTPUT) sea la máxima.
5	160kHz	50dB	160kHz	T6	
6	Repetir los pasos 4 y 5 hasta que se logre la máxima sensibilidad.
