SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product may contain a chemical known to the State of California to cause cancer, or birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

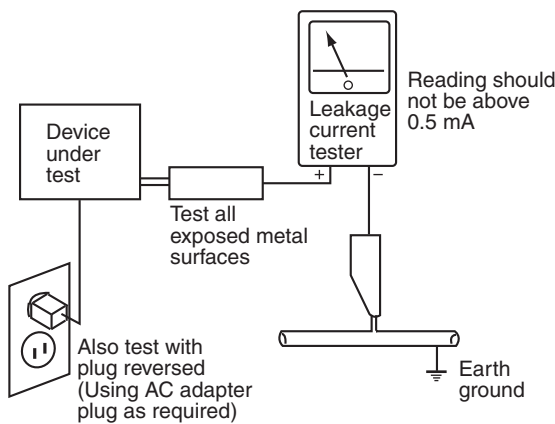

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120 V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

1. SERVICE PRECAUTIONS

1.1 NOTES ON SOLDERING

- For environmental protection, lead-free solder is used on the printed circuit boards mounted in this unit.
Be sure to use lead-free solder and a soldering iron that can meet specifications for use with lead-free solders for repairs accompanied by reworking of soldering.
- Compared with conventional eutectic solders, lead-free solders have higher melting points, by approximately 40 °C.
Therefore, for lead-free soldering, the tip temperature of a soldering iron must be set to around 373 °C in general, although the temperature depends on the heat capacity of the PC board on which reworking is required and the weight of the tip of the soldering iron.

Do NOT use a soldering iron whose tip temperature cannot be controlled.

Compared with eutectic solders, lead-free solders have higher bond strengths but slower wetting times and higher melting temperatures (hard to melt/easy to harden).

The following lead-free solders are available as service parts:

- Parts numbers of lead-free solder:
GYP1006 1.0 in dia.
GYP1007 0.6 in dia.
GYP1008 0.3 in dia.

1.2 NOTES ON REPLACING PARTS

The part listed below is difficult to replace as a discrete component part.

When the part listed in the table is defective, replace whole Assy.

Assy Name	Parts that is Difficult to Replace			
	Ref No.	Function	Part No.	Remarks
D-MAIN Assy	JA1601, JA9601 - JA9605	HDMI Connector	L109100190160-IL	JACK with Cu-through-hole & 21 pin
	JA9620	HDMI Connector	L109100190170-IL	JACK with Cu-through-hole & 21 pin
	JA9202	LAN Connector	G4060RJ450230-IL	JACK with Cu-through-hole & 10 pin
	IC9602	HDMI INTERFACE IC	—————	IC with heat-pad
	IC9002	DSP IC	—————	IC with heat-pad
	IC9204	MEDIA PROCESSOR IC	—————	IC BGA type

3. BASIC ITEMS FOR SERVICE

3.1 CHECK POINTS AFTER SERVICING

Items to be checked after servicing

To keep the product quality after servicing, confirm recommended check points shown below.

No.	Procedures	Check points
1	Confirm whether the customer complain has been solved. If the customer complain occurs with the particular source, such as Dolby Digital, DTS, AAC, DVD-A and HDMI, input it for the operation check.	The customer complain must not be reappeared. Video, Audio and operations must be normal.
2	Check the analog audio playback. (Make the analog connections with a DVD player.)	Each channel audio and operations must be normal.
3	Check the digital audio playback. (Make the digital connections with a DVD player.)	Each channel audio and operations must be normal.
4	Check surround playback. (Select Surround mode and check the multichannel operations via the DSP circuit.)	Each channel audio and operations must be normal.
5	Check the video outputs. (Connect with a DVD player.)	Video and operations must be normal.
6	Check the tuner (AM and FM) operations.	Audio and operations must be normal.
7	Check the sound from headphone output.	Sound must be normal, without noise.
8	Check the appearance of the product.	No scratches or dirt on its appearance after receiving it for service.

See the table below for the items to be checked regarding video and audio.

Item to be checked regarding video	Item to be checked regarding audio
Block noise	Distortion
Horizontal noise	Noise
Flicker	Volume too low
Disturbed image (video jumpiness)	Volume too high
Too dark	Volume fluctuating
Too bright	Sound interrupted
Mottled color	

3.2 JIGS LIST

Jigs List

Jig Name	Part No.	Remarks
RS-232C update jig (Jig + 10P FFC)	GGF1642	MAIN microcomputer firmware update (RS-232C ↔ Rear panel)
RS-232C cable (9-pin to 9-pin, straight cable)	(Marketing product)	
Board to board extension jig cable	GGD1846	Diagnosis (D-MAIN Assy ↔ CPU Assy)
Board to board extension jig cable	GGD1847	Diagnosis (D-MAIN Assy ↔ CPU Assy)
Board to board extension jig cable	GGD1848	Diagnosis (D-MAIN Assy ↔ CONCT Assy)
Board to board extension jig cable	GGD1756	Diagnosis (D-MAIN Assy ↔ BRI-1 Assy)
13P extension jig cable	GGD1740	Diagnosis (AMP7 Assy ↔ AUDIO Assy)
3P extension jig cable	GGD1741	Diagnosis (AMP7 Assy ↔ MAIN Assy)
HDMI cable	(Marketing product)	Diagnosis (FRONT Assy ↔ D-MAIN Assy)

5.2 ADAPTER ERROR MESSAGE

Functional Name

A Adapter port overcurrent detection

Outline

When the BT adapter is inserted in Adapter port, turn off the power of the Adapter port forcibly when it detects an overcurrent. And display ERROR state in FL.

Basic Operation

Front Key Sequence Change	Character Display	Time (sec.)	Icon Display (FL)	LED Display																				
When the overcurrent is detected	<table border="1"> <tr> <td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td> <td>1</td><td>2</td> </tr> <tr> <td>A</td><td>D</td><td>P</td><td>E</td><td>R</td><td>R</td><td></td><td></td> <td></td><td></td> </tr> </table> <p>*1</p> <p>Check it after turning the power once off then back on again, and it becomes the normal operation if normal.</p>	1	2	3	4	5	6	7	8	1	2	A	D	P	E	R	R					The display continues until the power is turned off.	—	—
1	2	3	4	5	6	7	8	1	2															
A	D	P	E	R	R																			

*1 Return the "ADP ERR" display to the normal display if you change it into other FUNCTION only in the ADAPTER PORT FUNCTION.

Also display "ADP ERR" if the ADAPTER PORT FUNCTION is ERROR state.

Explain Operation Detail

For detection method

- Confirm a detection port at intervals of 20 msec to 50 msec (*2), and judge it as an overcurrent when you detected an error consecutively three times.

*2 It is assumed that it is fixed value of the 20 msec to 50 msec degree.

5.3 USB/iPod ERROR MESSAGE

Functional Name

E iPod ERROR MESSAGE

Outline

Error message is displayed at abnormality time.

Basic Operation

Front Key Sequence Change	Time (sec)	FL Display
Over Current Error		I:/U: ERR

5.4 PROTECTION CIRCUIT

5.5 IC INFORMATION

■ (M3030RFGPFP_256k)(CPU Assy: IC203)(for VSX-1023-K, VSX-43)

MAIN CPU

• Pin Function

No.	Symbol	I/O	Description
1	DIRECT_SEL	O	DIRECT_SEL control pin
2	FLT_CLK	O	FL drive IC output pin of the Clock
3	P9_4		Not used
4	P9_3		Not used
5	POWERDOWN	I	Power down signal input pin
6	40-IR	I	Infra_red signal input
7	RMC	I	Remote control signal input pin
8	GND		Ground
9	CNVSS_UP	I	Switches processor mode
10	24C16_SDA	I/O	Data signal input & output for data backup of main CPU
11	24C16_SCL	O	Clock signal output for data backup of main CPU
12	RESET	I	Main CPU reset signal input pin (active at L)
13	XOUT	O	Output for 16 MHz Crystal
14	GND		Ground
15	XIN	I	Input for 16 MHz Crystal
16	3V3		+3.3 V Power Supply
17	NMI		Pull up
18	TUNER_INT	I	Tuner Interrupt signal input pin
19	4588_INT	I	AK4588 Interrupt signal input pin
20	WOL_NW	I	Output signal for WOL
21	SB_MUTE	O	SB ch. Audio output control pins at Mute Tr (active at L)
22	A_MUTE	O	Audio output control pins at Mute Tr (active at L)
23	HP_DET	I	Monitoring the input pin headphone connection
24	HP_RLY	O	Headphone audio output control pins at Mute Tr (active at L)
25	SW_SUM	O	Output for Sub Woofer SUMMING Control(H:SUMMING)
26	CTL_B	O	IC control signal B output pin for selecting the video input
27	V_POWERSAVE	O	Switches NJM2580M IC POWERSAVE mode
28	CNT_LED	O	Power LED control signal
29	CTL_A	O	IC control signal A output pin for selecting the video input
30	MUTE_B+_CONT	O	Power control pin mute B+
31	U_TX	O	Output for Upgrade (UART)
32	U_RX	I	Input for Upgrade (UART)
33	BUSY_JTAG/TRIGGER1	O	Output for JTAG BUSY/TRIGGER1_ON/OFF SIGNAL
34	SCLK_JTAG/TR_DET'	I	Serial clock input and Protection pin
35	VOL_DATA	O	Data signal output for R2A15219 (I2C)
36	VOL_CLK	O	CLK signal output for R2A15219 (I2C)
37	STBY_RLY	O	Output to ST-BY Relay ON/OFF (active at H)
38	T12V_ERR	I	Input for dc_trg_err condition
39	F_RLY	O	Tr driven control pins at the Front speaker output Relay. (active at H)
40	TUNER_SCLK	O	Clock signal output for Tuner Pack
41	EPM_UP	I	UPGRADE
42	TUNER_SDIO	I/O	Data signal input & output for Tuner Pack
43	TUNER_SEN	O	Output for Tuner Pack Serial Enable Input (active at L)
44	TUNER_RST	O	Output to reset Tuner Pack (active at L)
45	NC		Not used
46	U_CE	O	UPGRADE pin
47	NC		Not used
48	S_RLY	O	Tr driven control pins at the Surround speaker output Relay. (active at H)
49	SB_RLY	O	Tr driven control pins at the Surround Back speaker output Relay. (active at H)
50	FBRL	O	Tr driven control pins at the F.H /B speaker output Relay. (active at H)

A

No.	Symbol	I/O	Description
51	C_RLY	O	Tr driven control pins at the Center speaker output Relay. (active at H)
52	NC		Not used
53	SP_DC	O	HDMI LED on/off control pin if Speaker DC Protection
54	NET_PWR	O	Control pin HDMI IC +5V REG. IC (on: H)
55	DVC_PWR	O	Control pin HDMI IC +1.8V REG. IC (on: H)
56	DIR_PWR	O	Control pin digital +3.3V DC/DC IC (on: H)
57	MIC_DET	I	Monitoring the input pin microphone connection (detection: L)
58	4588_PDN	O	Output for AK4588 power down
59	4588_SDA	I/O	Data signal input & output for AK4588 (I2C)
B 60	4588_SCL	O	Clock signal output for AK4588 (I2C)
61	DSP_SDA	I/O	Data signal Input & output for DA788
62	3V3		+3.3 V Power Supply
63	DSP_SCL	O	Clock signal output for DA788 (SPI)
64	GND		Ground
65	DSP_RST	O	Output to reset DA788
66	NC		Not used
67	DSP_SDOUT	I	Data signal input for DA788 (SPI)
68	DSP_CS	O	Chip select signal output for DA788
69	DSP_RDY	I	SPI Enable signal input from DA788
70	HDMI_SEL	O	IC signal of the control pins at select HDMI or analog audio
C 71	PROTECT2	I	AMP7 Assy input signal of the RADIATOR THERMAL pin (L = PROTECTION)
72	MAIN_IRQ	O	Interrupt signal output pin to sub CPU
73	SUB_ON	O	Control pin SUB CPU IC +3.3 V REG. IC (on: H)
74	SUB_IRQ	I	Interrupt signal output pin to main CPU
75	HD_MUTE	I	Input for HDMI_RX_MUTE condition
76	SUB_PDN	O	Output for sub CPU power down
77	SUB_RST	O	Output to reset sub CPU
78	SCDI_MAIN	I	Data signal input from sub CPU
79	SCDO_MAIN	O	Data signal output to sub CPU
80	CCLK_MAIN	O	Clock signal output for sub CPU
81	SET OPTION	I	Input for Set option
82	STEP OPTION	I	Input for Step (Group) option
D 83	VIDEO_MUTE	O	Output for Video IC MUTE condition
84	FLT_DATA	O	FL drive Ic output pin of the Data
85	PROTECT1	I	AMP7 Assy Protection detection signal input pin (ASO = 0.82 V, DC = 1.39 V)
86	VOL_DN	I	Data input for VOLUME encoder (VOLUME DOWN is counterclockwise direction)
87	VOL_UP	I	Data input for VOLUME encoder (VOLUME UP is clockwise direction)
88	IN_DN	I	Data input for INPUT selector encoder
89	NC		Not used
90	KEY1	I	Data input for Key1 scan
91	KEY3	I	Data input for Key3 scan
92	KEY2	I	Data input for Key2 scan
93	IN_UP	I	Data input for INPUT selector encoder
E 94	FLT_CE	O	Output for chip enable of SC16315
95	NC		Not used
96	GND		Ground
97	USBDCERR	I	Input for usb_dc_err condition
98	3V3		+3.3 V Power Supply
99	3V3		+3.3 V Power Supply
100	V+5V_DET	I	Detection pin V+5V protection

6. SERVICE MODE

6.1 TEST MODE

[1] Display mode for numbers of protection detections

[Purpose]

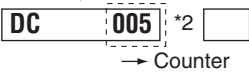

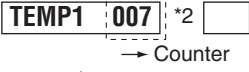

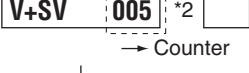

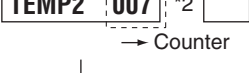

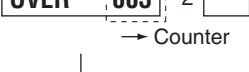

The numbers of detections for various protection processes are displayed.

[How to enter/exit]

During Standby mode, simultaneously press and hold the [PRESET ←] and [STANDBY/ON] keys for 2 seconds to enter this mode.

The display will return to the normal indication when no key operation is performed for 5 seconds.

[Basic operations]

Key Operation	FL Display	Time (sec.)	Description of Indications
(STANDBY state)			
[PRESET ←] + [STANDBY/ON] keys (Initial display)		5 (-> normal) *1	Number of DC error detections
[ENTER] key		5 (-> normal) *1	Number of abnormal-temperature error detections
[ENTER] key		5 (-> normal) *1	
[ENTER] key		5 (-> normal) *1	Number of abnormal-temperature error detections
[ENTER] key		5 (-> normal) *1	Number of OVERLOAD error detections
(Initial display)			

*1 "5 (-> normal)" denotes that the display will return to the normal indication when no key operation is performed for 5 seconds.

*2 Variable range: 0 to 255

The above-mentioned Display mode is available only when the product operates properly.

If any protection function is activated while the product is in use, the product cannot be turned ON and enter the above Display mode. In such a case, cancel the protection function, referring to "[3] 3.4 How to cancel the status after detection of the DC error." If a protection function is activated immediately after the previous protection function is canceled, cancel that protection function again then enter STBY mode immediately. You can then see the error logs, following the above procedures, until a next protection function is activated.

VSX-1023-K

5

6

7

8

45

A [2] Reset mode for numbers of protection detections

[Purpose]

For clearing all the counts of protection detections.
(This mode resets the counts of protection detections.)

[How to enter/exit]

During Standby mode, simultaneously press and hold the [ALC/STANDARD SURR] and [STANDBY/ON] keys for 10 seconds to enter this mode.
The display will return to the normal indication when no key operation is performed for 5 seconds.

[Basic operations]

Key Operation	FL Display	Time (sec.)	Description of Indications
(STANDBY state)	<input type="text"/>		
[ALC/STANDARD SURR] + [STANDBY/ON] keys (press and hold the keys for 10 seconds.)	<input type="text" value="CLEAR?"/>	5 (-> normal) *1	
[ENTER] key ↓	↓		
(Counter Clear end)	<input type="text" value="0 K"/>	5 (-> normal) *1	
(Normal display)	<input type="text" value="BD"/> *2	usually	

*1 "5 (-> normal)" denotes that the display will return to the normal indication when no key operation is performed for 5 seconds.

*2 Indication when the BD function is selected

[Detailed explanations]

- When the procedures for Reset mode for numbers of protection detections are completed, all the counters will be reset to "000."
- Prohibitions:
The protection detection counts cannot be cleared (reset to 000) with the MEMORY CLEAR process.
They can only be cleared when the procedures of Reset mode are completed.

[3] The unit's operation when an error is detected

[Purpose]

- The unit's operation when a DC/OVER/TEMP error is detected is described here.
- How to cancel the status after detection of a DC error is described here, because no key input will be accepted after a DC error detection.

[Basic operations]

3.1 DC (AMP is abnormality) error detection

Key Operation	FL Display	Time (sec.)	Description of Indications
(Normal display)	<input type="text" value="BD"/> <input type="checkbox"/>	usually	Normal display
(DC detection)	<input type="text" value="BD"/> <input type="checkbox"/>		
↓ (Auto) (RECEIVER POWER OFF)	<input type="text"/> <input type="checkbox"/>		

If the AC power cord is plugged in while the AVR is prohibited from being ON because of DC detection, the HDMI LED will flash at intervals of 500 msec.

3.2 OVERLOAD (overcurrent) error detection

Key Operation	FL Display	Time (sec.)	Description of Indications
(Normal display)	<input type="text" value="BD"/> <input type="checkbox"/>	usually	Normal display
(OVERLOAD detection)	<input type="text" value="BD"/> <input type="checkbox"/>		
↓ (Auto) (RECEIVER POWER OFF)	<input type="text"/> <input type="checkbox"/>		

3.3 TEMP (AMP overheat) error detection

For detection of a TEMP error, the unit monitors both the TR_DET and PROTECT2 signals. If a TEMP error is detected, the processes shown below will be performed. The processes shown below are rough operational specifications and are not the actual commands from the mounted components.

After a TEMP error is detected, the count of protection activation detections will be updated.

Counter: Temp2 TR_DET
P6_4 (34 pin)
(TRTHER_DET from AMP Assy)

Counter: Temp1 PROTECT2
PL2_1 (71 pin)
(RADI_DET from AMP Assy)

*1: The detection interval must be 1 sec or less.

*2: If PROTECT 2 is detected while TR_DET detection is prohibited for 2 min, the PROTECT 2 function will be activated.

*3: The detection interval must be 1 sec or less.

3.4 How to cancel the status after detection of the DC error

Key Operation	FL Display	Time (sec.)	Description of Indications
(STANDBY state) [ADVANCED SURROUND] + [STANDBY/ON] keys (press and hold the keys for 2 seconds.) ↓ (Normal display)	 	usually	Normal display

[Detailed explanations] Simultaneously holding the [ADVANCED SURROUND] and [STANDBY/ON] keys on the front panel pressed for 2 seconds will cancel Key Input Inhibition mode after a DC error detection and turn the unit ON.

6.2 DEFAULT SETTINGS

■ Resetting the system

Use this procedure to reset all the receiver's settings to the factory default. Use the front panel controls to do this.

- For instructions on resetting the network connection settings.

- 1 Switch the receiver into standby.
- 2 While holding down **BAND**, press and hold **⏻ STANDBY/ON** for about two seconds.
- 3 When you see **RESET?** appear in the display, press **AUTO SURROUND/STREAM DIRECT**.
OK? shows in the display.
- 4 Press **ALC/STANDARD SURR** to confirm.
OK appears in the display to indicate that the receiver has been reset to the factory default settings.

■ Resetting the NETWORK function

Use to reset all network connection settings to their initial, factory-setting condition.

- 1 Press **NETWORK**.
- 2 Press **HOME MENU**.
- 3 Select **'Factory Reset'** from the Network Setup menu.
- 4 Select **'Start'**.
- 5 Select **'OK'** to confirm.
The screen will return automatically to the play screen.

7. DISASSEMBLY

Note:

Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

Some connections of the housing wires or connectors may be tight. When disconnecting those wires or connectors, be careful not to damage them.

1. Discharging

[1] MAIN Assy Capacitor (C55, C58)

■ for VSX-1023-K, VSX-43

[Procedures]

- (1) Unplug the power cord.
- (2) Disconnect the 10P connector from CP403 of the AMP7 Assy between CN3 of the MAIN Assy.
- (3) Connect +B and -B terminal of the D7, using resistor leads with 47 - 100 ohms (2 W or higher), for discharging.
 - * Discharging time: 30 - 60 seconds, depending on the level of resistance.
- (4) Check that the voltage between the +B and -B terminals is less than 1 V, using a tester.
 - * Be sure to connect the GND terminal of the tester to the chassis.
 - * If the voltage is still 1 V or higher, repeat Step (3).

AMP7 Assy

MAIN Assy

47 - 100 ohms
(2 W or higher)

■ for VSX-823-K

[Procedures]

- (1) Unplug the power cord.
- (2) Disconnect the 10P connector from CP403 of the AMP5 Assy between CN3 of the MAIN Assy.
- (3) Disconnect the 7P connector from CP7 of the REG Assy between W7 of the MAIN Assy.
- (4) Connect B+ and B- terminal of the D7, using resistor leads with 47 - 100 ohms (2 W or higher), for discharging.
 - * Discharging time: 30 - 60 seconds, depending on the level of resistance.
- (5) Check that the voltage between the B+ and B- terminals is less than 1 V, using a tester.
 - * Be sure to connect the GND terminal of the tester to the chassis.
 - * If the voltage is still 1 V or higher, repeat Step (4).

REG Assy

MAIN Assy

47 - 100 ohms
(2 W or higher)

[2] FL-30 V Capacitor (MAIN Assy C101)

[Procedures]

- (1) Unplug the power cord.
- (2) Connect pins 3, 4 (-30V) and pins 5, 6 (GND) of the CN704B on the CPU Assy, using resistor leads with 47-100 ohms (2 W or higher), for discharging.
 - * Discharging time: 5 - 10 seconds, depending on the level of resistance.

- (3) Check that the voltage between the -30V terminal is less than 1 V, using a tester.
 - * Be sure to connect the GND terminal of the tester to the chassis.
 - * If the voltage is still 1 V or higher, repeat Step (2).

for VSX-1023-K, VSX-43

for VSX-823-K

2. Disassembly (VSX-1023-K, VSX-43)

Note:

For performing the diagnosis shown below, the following jigs for service is required:

- Board to board extension jig cable (GGD1846)
- Board to board extension jig cable (GGD1847)
- Board to board extension jig cable (GGD1756)
- 13P extension cable (GGD1740)
- 3P extension cable (GGD1741)
- HDMI cable (marketing product)

[1] Front Panel Section

Remove the cabinet by removing the 10 screws.

- (1) Remove the five screws.
(BBZ30P080FTB)

• Bottom view

- (2) Remove the three screws.
(BBZ30P080FTC)

- (3) Remove the two screws.
(1500001206010-IL)

- (4) Release the jumper wire.
(5) Cut the one binder.

- (6) Remove the acetate tape
(JA9620)

- (7) Disconnect the HDMI cable.
(8) Disconnect the one flexible cable and five connectors.
(CN9202, CN9601, CN704B, CP703, CP723, CP722)

- (9) Unhook the two hooks.
(10) Remove the front panel section.

[2] Heatsink Section

Caution: Heatsink section in work becomes hot, and be careful with it.

Remove the cabinet by removing the 10 screws.

- (1) Remove the three screws.
(BBZ30P080FTC)

- (2) Remove the four screws.
(BBZ30P080FTC)
(3) Cut the one binder.

- (4) Remove the acetate tape
(5) Disconnect the HDMI cable.
(JA9620)
(6) Cut the binder.
(7) Disconnect the two connectors.
(CN404, CP401)
(8) Remove the Heatsink section.

- (9) Arrange the Heatsink section as shown in the photo below.
(10) Connect the two extension jig cables.

Diagnosis

A [3] D-MAIN Assy

Remove the cabinet by removing the 10 screws.

- (1) Remove the two screws.
(BBT30P100FTB)
- (2) Remove the six screws.
(BSZ30P040FTB)

B

- (3) Remove the acetate tape
- (4) Disconnect the HDMI cable.
(JA9620)
- (5) Cut the two binders.
- (6) Remove the two screws.
(BBZ30P080FTC)
- (7) Disconnect the one connector and three B to B connectors.
(CN101, CN102, CN1801, CN1802)

D

- (8) Connect the three extension jig cables.
- (9) Arrange the D-MAIN Assy in the photo below.
- (10) Insert any insulation sheet.
- (11) Connect the HDMI cable (marketing product) from the FHDMI Assy if Front HDMI input needs to be checked.

E

Note:
Do not connect the HDMI cable provided with the product to prevent damage to the HDMI connector. Instead, use the another HDMI cable (marketing product) to prevent a load from being applied to the HDMI connector.
D-MAIN Assy works normally even though no connection of HDMI cable. But when checking Front HDMI input, that HDMI connection is required.

F

[4] MAIN Assy

Remove the cabinet by removing the 10 screws.

[4-1] Back chassis, D-MAIN Assy

- (1) Remove the 11 screws.
(BBT30P100FTB)
- (2) Remove the six screws.
(BSZ30P040FTB)
- (3) Remove the D-MAIN Assy.
(See procedure [3].)

[4-2] MAIN Assy

- (1) Remove the CPU-G Assy by removing the two screws.
(BBZ30P080FTC)
- (2) Cut the four binders.
- (3) Disconnect the one flexible cable and 11 connectors.
(CN404, 704B, CP1 to 3, 401, 403 to 406, 722, 723)
- (4) Remove the six screws.
(BBZ30P080FTC)
- (5) Remove the four screws.
(BBZ30P180FTC)
- (6) Remove the MAIN Assy with CPU Assy and back chassis.

3. Disassembly (VSX-823-K)

Note:

For performing the diagnosis shown below, the following jigs for service is required:

- Board to board extension jig cable (GGD1846)
- Board to board extension jig cable (GGD1847)
- Board to board extension jig cable (GGD1848)
- HDMI cable (marketing product)

[1] Front Panel Section

Remove the cabinet by removing the 10 screws.

- (1) Remove the five screws.
(BBZ30P080FTB)

- (2) Remove the three screws.
(BBZ30P080FTC)
- (3) Remove the two screws.
(1500001206010-IL)

- (4) Release the jumper wire.
- (5) Cut the one binder.
- (6) Remove the acetate tape
(JA9620)
- (7) Disconnect the HDMI cable.
- (8) Disconnect the one flexible cable and five connectors.
(CN205, CN206, CN704B, CN9202, CN9601, CP703)

- (9) Unhook the two hooks.
- (10) Remove the front panel section.

[2] Heatsink Section

Caution: Heatsink section in work becomes hot, and be careful with it.

Remove the cabinet by removing the 10 screws.

- (1) Remove the three screws.
(BBZ30P080FTC)

• Bottom view

- (2) Remove the two screws.
(BBZ30P080FTC)
(3) Release the jumper wire.

- (4) Remove the acetate tape
(5) Disconnect the HDMI cable.
(JA9620)
(6) Disconnect the four connectors.
(CP401 to CP404)
(7) Remove the heatsink section.

A [3] D-MAIN Assy

Remove the cabinet by removing the 10 screws.

[3-1] Disassembly

- (1) Remove the two screws (BBT30P100FTB)
- (2) Remove the six screws (BSZ30P040FTB)

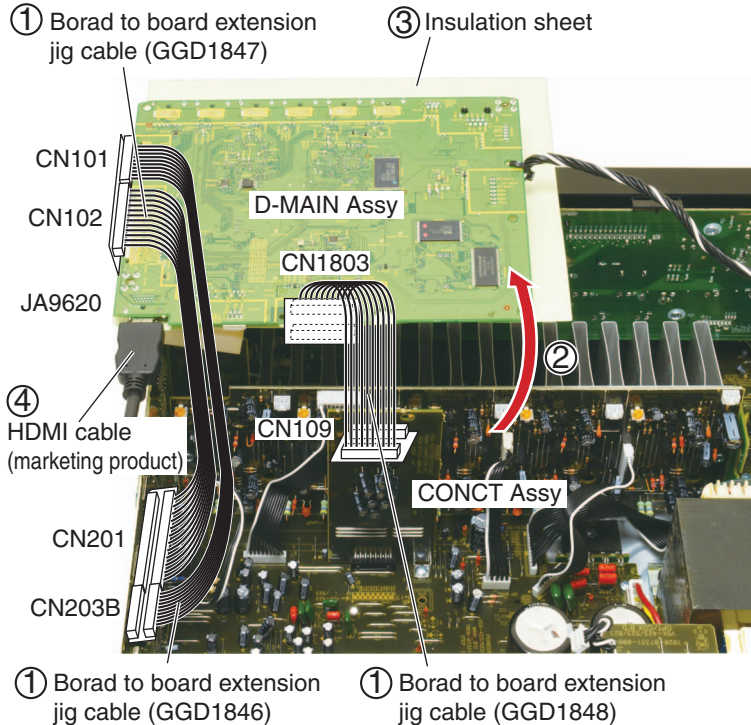

- (3) Remove the acetate tape
- (4) Disconnect the HDMI cable (JA9620)
- (5) Cut the three binders.
- (6) Remove the one screw (BBZ30P080FTC)
- (7) Disconnect the one connector and three B to B connectors (CN101, CN102, CN1802, CN1803)

[3-2] Diagnosis of D-MAIN Assy and MAIN Assy

- (1) Connect the three extension jig cables.
- (2) Arrange the D-MAIN Assy in the photo below.
- (3) Insert any insulation sheet.
- (4) Connect the HDMI cable (marketing product) from the FHDMI Assy if Front HDMI input needs to be checked.

Note:
Do not connect the HDMI cable provided with the product to prevent damage to the HDMI connector. Instead, use the another HDMI cable (marketing product) to prevent a load from being applied to the HDMI connector.
D-MAIN Assy works normally even though no connection of HDMI cable. But when checking Front HDMI input, that HDMI connection is required.

[3-3] Diagnosis of AMP5 Assy

- (1) Disconnect the one extension jig cable.
- (2) Remove the one screw.
(BBZ30P180FTC)
- (3) Remove the CONCT Assy by disconnecting
the one BtoB connector.
(CN110)

- (4) Reassemble the CONCT Assy to D-MAIN Assy.
- (5) Connect the one extension jig cable.

Diagnosis

⑤ Borad to board extension
jig cable (GGD1848)

MAIN Assy

AMP5 Assy

A [4] MAIN Assy

Remove the cabinet by removing the 10 screws.

[4-1] Back chassis, D-MAIN Assy

- (1) Remove the 11 screws. (BBT30P100FTB)
- (2) Remove the six screws. (BSZ30P040FTB)
- (3) Remove the D-MAIN Assy. (See procedure [3].)

C [4-2] MAIN Assy

- (1) Remove the CPU-G Assy by removing the two screws. (BBZ30P080FTC)
- (2) Release the jumper wire.
- (3) Disconnect the one flexible cable and eight connectors. (CN205, 206, 704B, CP1, 7, 401 to 404)
- (4) Remove the three screws. (BBZ30P080FTC)
- (5) Remove the four screws. (BBZ30P180FTC)
- (6) Remove the MAIN Assy with CPU Assy and back chassis.

8. EACH SETTING AND ADJUSTMENT

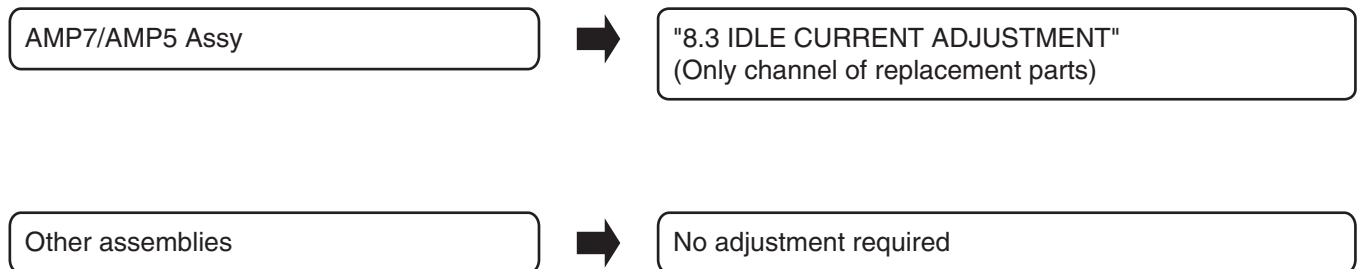

- If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.
- Any value changed in Adjustment mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.
- Use a stable AC power supply.

8.1 ADJUSTMENT REQUIRED WHEN THE UNIT IS REPAIRED OR REPLACED

■ When any of the following assemblies is replaced

■ When any of the following parts is replaced

Note 1:

Some parts on D-MAIN and FHDMI Assemblies can not be replaced due to using heat-pad connection between the board. Please refer to [1.2 NOTES ON REPLACING PARTS], when the parts listed in the table is defective, replace whole Assy.

Note 2:

After replacing D-MAIN Assy, the unit needs to reset the system and NETWORK function to factory default. Refer to "Resetting the system" and "Resetting the NETWORK function" on "6.2 DEFAULT SETTINGS", reset the unit.

8.2 UPDATING OF THE FIRMWARE

[Purpose]

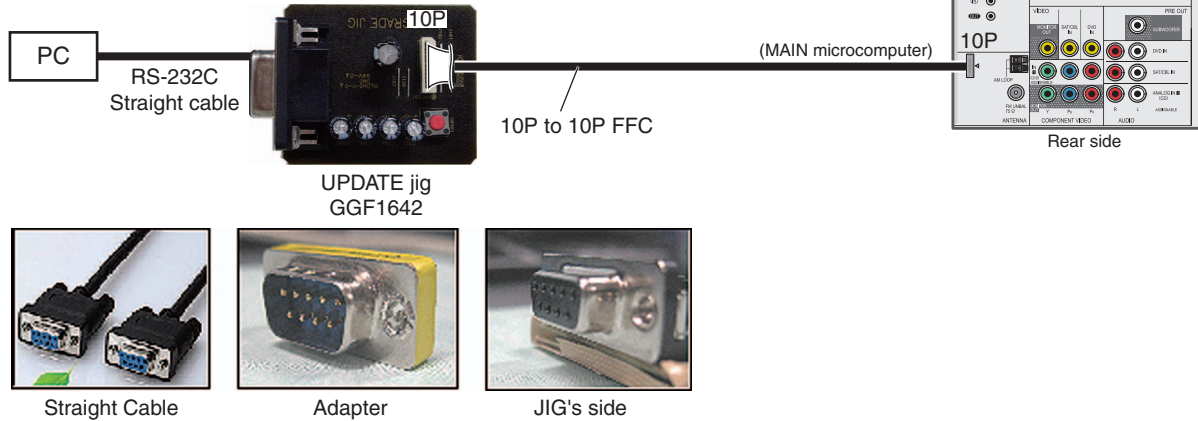

Refer to this section when updating the firmware of each microcomputer is required by the service information, etc.

[Necessary Tools and Connections]

- PC with a serial port
- RS-232C cable (9-pin to 9-pin, straight cable) (Marketing product)
- UPDATE jig: GGF1642 (Use FFC of GGF1642. (10P to 10P FFC))
- Firmware

Connect as shown in the figure below.

Insert the FFC with its contact surface facing the Δ mark.

(1) MAIN microcomputer firmware update

[Preestablishment]

- NetworkStandby: OFF
- HDMI Control: OFF
- HDMI StandbyThrough: OFF

[Procedures]

* Store the EPFlash.exe file in the desktop of the PC.

1. Unplug the AC cord.
Connect the FFC cable. (MAIN microcomputer)
Start up application FlashSta on the PC.

3. Press the OK button.

Select for COM port.

[if the following messages are displayed]

Please push the cancel button and press the JIG's RESET button.

And confirm a connection of FFC.

Please return to procedure 1.

4. Select the update file and enter ID.

② Enter ID.
Enter "ff" in all field.

③ Press OK button to go to next step.

① Selection of upgrade file

① Select the update file

Press the OK button.

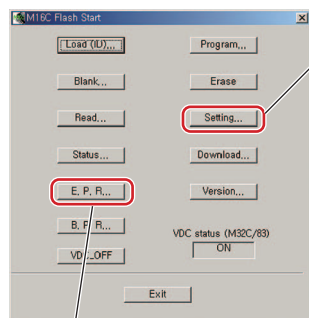

Select "VSX_1023Mid_Main Ver***.mot"
or "VSX43_Main_Ver0.60.mot"
"VSX_823Mid_Main Ver***.mot" file to update the MCU.

② Enter ID.

Press the OK button.

5. Set speed update and update the MCU.

① Set speed of update.

① Set speed of update.
Set Baud rate to 38400.

Press the OK button.

② Update the MCU.

E.P.R=>Erase+Program+Read

② Update the MCU

Press the E.P.R ... button

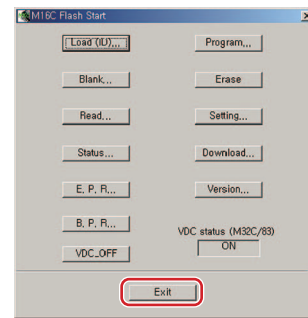

Press OK button.

6. Update Finished MAIN microcomputer.

Press the OK button.

Press the Exit button.
Please wait for until this window disappears.

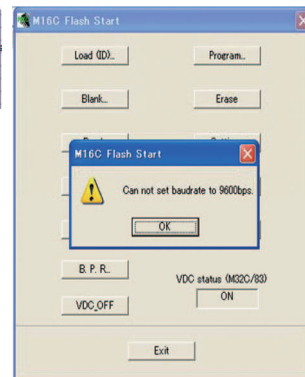

If the following messages are displayed, shut the update program down, and start the update again from step 1.

Push the JIG's RESET button during 1 sec.
Press the OK button.

Select the 9600 of the Board rate then press the OK button

7. Unplug the AC cord.

Disconnect the FFC cable.

A (2) SUB microcomputer firmware update

[Preparations]

Save the firmware file to the "root" of empty USB memory. The file name of the firmware file is "RegM14Sub_V***.bcd". Don't save other files.

- NetworkStandby: OFF
- HDMI Control: OFF
- HDMI StandbyThrough: OFF
- Connect a unit to TV and HDMI, and the GUI output of the unit performs in a state to appear.

[Procedures]

1. Turn on the unit.
2. Set a function for a "NETRADIO".

Note:

Without a network connection, "Server Error" will be displayed on the TV screen. Under this condition, the Service Menu (menu for updating the SUB microcomputer) is not accessible. Set the remote control unit supplied with the unit to Network Function Operation mode then press the ENTER button so that "Empty" is displayed on the screen. Then proceed to Step 3.

3. Press the "ESC (A85F)" button on the Service remote control unit (GGF1381), then press the "+10 (A81F)" button to enter the service menu (for SUB microcomputer firmware update menu).

When you press other buttons between "ESC" button and "+10" buttons, be invalid.

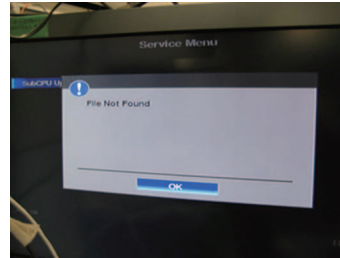

4. Press the "ENTER" button of the remote control unit supplied with Network Function as the state that you can operate.

- (1) When a product can recognize a file, become the following indication.

Select "Start", and press the "ENTER" button.

- (2) When a product cannot recognize a file, become the following indication. Check on USB memory with a file.

5. Update starts, and "UPDATE" blinks to FL screen and HDMI LED blinks. Be approximately 8 minutes for update at time.

6. When update is completed, "Completed" is displayed by TV screen and HDMI LED lights.

* "UPDATE" blinks to FL display and is displayed. In rare cases, "Completed!" may not be displayed on the TV screen. In such a case, updating is completed if the HDMI LED has become lit. Proceed to Step 7.

7. Disconnect the AC power cord. (The POWER button does not respond.) Confirm a version of the firm ware of SUB microcomputer.

Note:

Because update is not possible again, never unplug the power cord until the updating process is completed.

(3) USB (BridgeCo) firmware update

[Procedures]

1. Select 'Firmware Update' from the Network Setup menu. The receiver checks whether the USB memory device inserted into the USB port on the receiver's front panel contains updatable software.
2. To update, select 'Start'.
3. When 'Updating in progress, don't unplug!' is displayed, select 'OK'.
 - If 'File Not Found' is displayed, try the following:
 - No update file was found on the USB memory device. Store the file in the USB memory device's root directory.
 - Try disconnecting then reconnecting the USB device or storing the update file again. If the error still occurs, try using a different USB memory device.
4. The software update will start. Please wait. The OSD display will turn off during update and the words 'UPDATE' will flash on the front panel.
5. If 'COMPLETE' is displayed, updating is completed. The screen will return automatically to the play screen.
 - If 'FAIL' is displayed on the front panel display, updating has failed. Try the following:
 - Turn the receiver's power off, then turn it back on and try updating the software again.
 - Try disconnecting then reconnecting the USB device or storing the update file again. If the error still occurs, try using a different USB memory device.

(4) DSP firmware update

[Preestablishment]

- NetworkStandby: OFF
- HDMI Control: OFF
- HDMI StandbyThrough: OFF

[Procedures]

1. Select an Input Function that allows reception via Optical input 1 then set the unit to STBY_Off mode.
2. Press the SPEAKERS and STANDBY/ON keys simultaneously to enter DSP UpDate mode. ("DSP UP" is displayed.)
3. When "PLAY" is displayed, playback of the .wav file starts. (Play the file only once. NEVER repeat playback.) ("PLAY" is displayed.)
4. After playback is finished and "ENTER" is displayed, press the ENTER key on the front panel. ("ENTER" is displayed.)
5. "WRITING" is automatically displayed.
6. After writing is completed, "COMPLETE" is displayed.
7. Turn the unit off then confirm that the version has been updated.

(5) Check to the firmware version

[Preestablishment]

- NetworkStandby: OFF
- HDMI Control: OFF
- HDMI StandbyThrough: OFF

[Procedures]

Make sure that the main unit is in STANDBY mode.

Press and hold the "ENTER" and "STANDBY/ON" keys, then press the "ENTER" key to display each UCOM version.

Each time the "ENTER" key is pressed, then indications on the FL display change as follows:

* It may take around 1 minute until the version of the USB microcomputer is displayed. When be not displayed, wait in the state that turned on the power of the product for 1 minute, and please do it from the first procedure again.

Turn the unit off.

8.3 IDLE CURRENT ADJUSTMENT

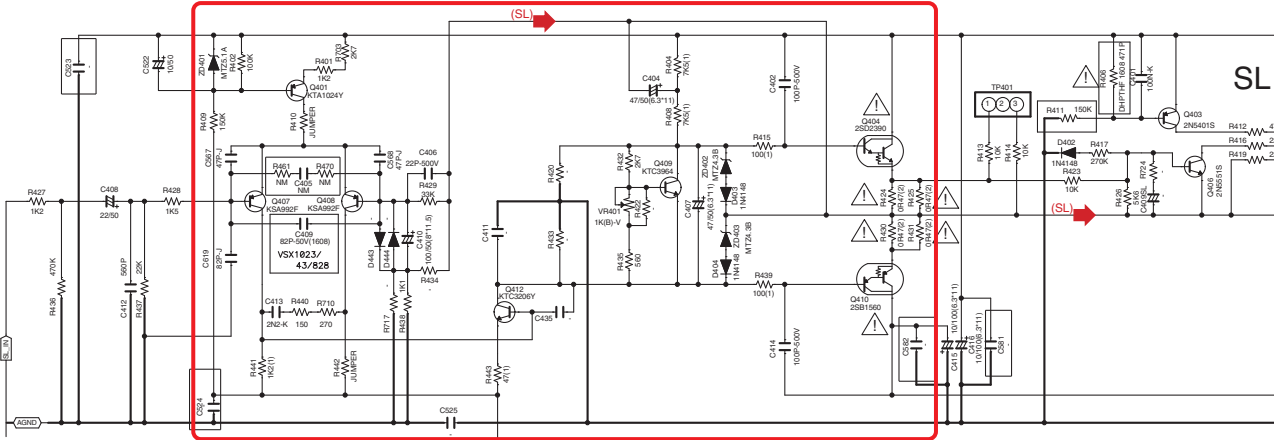

for VSX-1023-K, VSX-43

When any component parts which are within the red square on the following circuit diagram are replaced, the idle current adjustment of that channel is required. (Idle current adjustment for another channel is not required.)

However, when any capacitors are replaced, the adjustment is not required.

(The following circuit diagram is for SL channel, but another channel also has same circuit diagram and same adjustment is required)

Channel	Measurement Points	Adjustment Points	Procedure
FL	TP404 pin 1 (+) TP404 pin 3 (-)	VR404	① Turn on the power. ② Perform aging for one minute. ③ Connect a digital voltmeter to the measurement point. ④ Turn the adjustment VR so that the voltage becomes in $2.0 \text{ mV} \pm 0.2 \text{ mV}$. (Condition : No signal and no load)
FR	TP402 pin 1 (+) TP402 pin 3 (-)	VR402	
C	TP403 pin 1 (+) TP403 pin 3 (-)	VR403	
SL	TP401 pin 1 (+) TP401 pin 3 (-)	VR401	
SR	TP405 pin 1 (+) TP405 pin 3 (-)	VR405	
SBL	TP406 pin 1 (+) TP406 pin 3 (-)	VR406	
SBR	TP407 pin 1 (+) TP407 pin 3 (-)	VR407	

• Adjustment points and measurement points.... see fig.1.

9. EXPLODED VIEWS AND PARTS LIST

- NOTES:
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 - The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - Screws adjacent to ∇ mark on product are used for disassembly.
 - For the applying amount of lubricants or glue, follow the instructions in this manual. (In the case of no amount instructions, apply as you think it appropriate.)

NOTE FOR FUSE REPLACEMENT

CAUTION - FOR CONTINUED PROTECTION AGAINST RISK OF FIRE, REPLACE WITH SAME TYPE AND RATINGS OF FUSE.

NOTES

1. Resistor values are indicated in ohms unless otherwise specified
[k = 1,000 m = 1,000,000]
2. Capacitor values are indicated in microfarads unless otherwise specified.
3. : These resistor are to be segregated from printed wiring board or other accessible parts.
CAUTION
Safety precaution to be followed during servicing

- 1] Since those parts marked with are critical parts for safety, use only the one described in the parts list
- 2] Before returning the set to the customer make appropriate leakage current or resistance measurements to determine the exposed parts are properly insulated from the supply circuit.

NOTES

- Resistor values are indicated in ohms unless otherwise specified
 [k = 1,000 m = 1,000,000]
- Capacitor values are indicated in microfarads unless otherwise specified.
 [p = micro-microfarads]
- : These resistor are to be segregated from printed wiring board or other accessible parts.

CAUTION
 Safety precaution to be followed during servicing

- Since those parts marked with are critical parts for safety, use only the one described in the parts list
- Before returning the set to the customer make appropriate leakage current or resistance measurements to determine the exposed parts are properly insulated from the supply circuit.

12. PCB PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

● The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

● When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47 k ohm (tolerance is shown by J = 5%, and K = 10%).

560 Ω → 56 × 10¹ → 561 RD1/APU 5 6 7 J

47 k Ω → 47 × 10³ → 473 RD1/APU 4 7 3 J

0.5 Ω → R50 RN2H R 5 0 K

1 Ω → 1R0 RSIP 7 R 0 K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62 k Ω → 562 × 10¹ → 5621 RN1/4PC 5 6 2 7 F
