For details, refer to "Important Check Points for Good Servicing".

SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol. Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification (addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris. Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs. In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages. If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries. Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification. Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance. Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

2. EXPLODED VIEWS AND PARTS LIST

- NOTES:
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - Screws adjacent to  mark on product are used for disassembly.
 - For the applying amount of lubricants or glue, follow the instructions in this manual. (In the case of no amount instructions, apply as you think it appropriate.)

- When ordering service parts, be sure to refer to "EXPLODED VIEWS and PARTS LIST" or "PCB PARTS LIST".
- The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
-  : The power supply is shown with the marked box.

5. PCB PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

● The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

● When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω \rightarrow 56×10^1 \rightarrow 561 RD1/4PU $\begin{matrix} 5 & 6 & 7 \\ \hline \end{matrix}$ J
 47k Ω \rightarrow 47×10^3 \rightarrow 473 RD1/4PU $\begin{matrix} 4 & 7 & 3 \\ \hline \end{matrix}$ J
 0.5 Ω \rightarrow R50 RN2H $\begin{matrix} R & 5 & 0 \\ \hline \end{matrix}$ K
 1 Ω \rightarrow 1R0 RS1P $\begin{matrix} 1 & R & 0 \\ \hline \end{matrix}$ K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω \rightarrow 562×10^1 \rightarrow 5621 RN1/4PC $\begin{matrix} 5 & 6 & 2 & 1 \\ \hline \end{matrix}$ F

● Meaning of the figures and others in the parentheses in the parts list.

Example IC 301 is on the point (face A, 91 of x-axis, and 111 of y-axis) of the corresponding PC board.

IC 301 (A, 91, 111) IC NJM2068V

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 DSP TROUBLESHOOTING

■ Troubleshooting for all destination

- When a sound is not out in the multi-CH signal playback mode or surround mode with the digital signal input.
(SurroundBack is not output by setting.)
- Suppose CR to be poor contact and that is not damaged.
- This shows failure analysis of DSP Assy.

Step 0: Preliminary confirmation

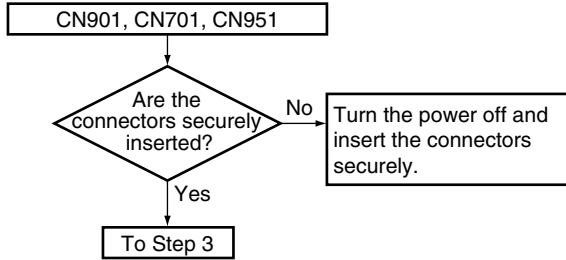

Confirm the following items before checking

Step 1: MUTE pin

Step 2: BtoB connector

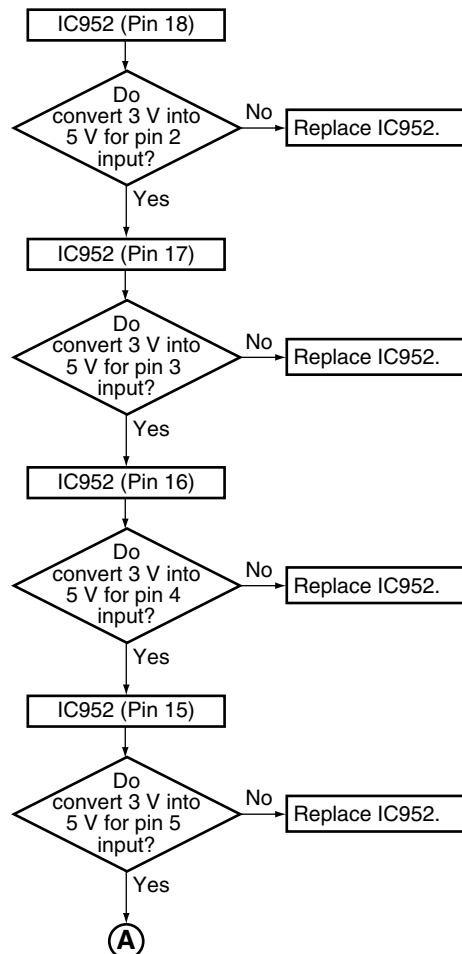

Step 3: Regulator IC

Part shape and Pin arrangement of IC901 and IC902

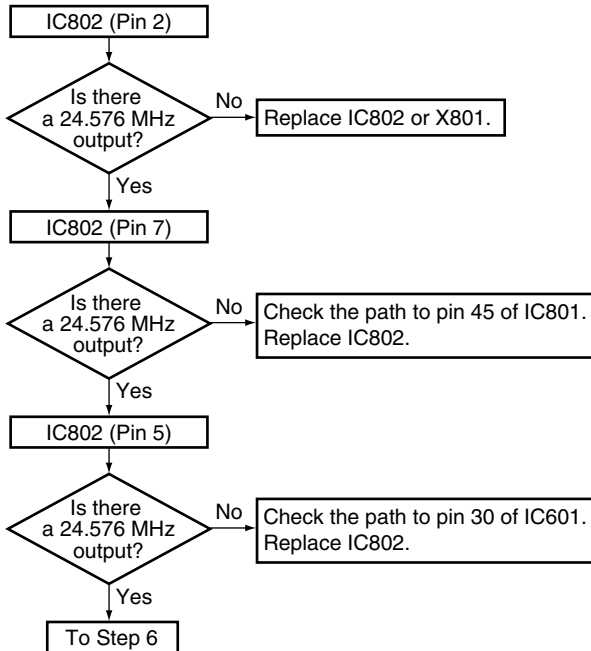

Step 4: 3 V to 5 V conversion

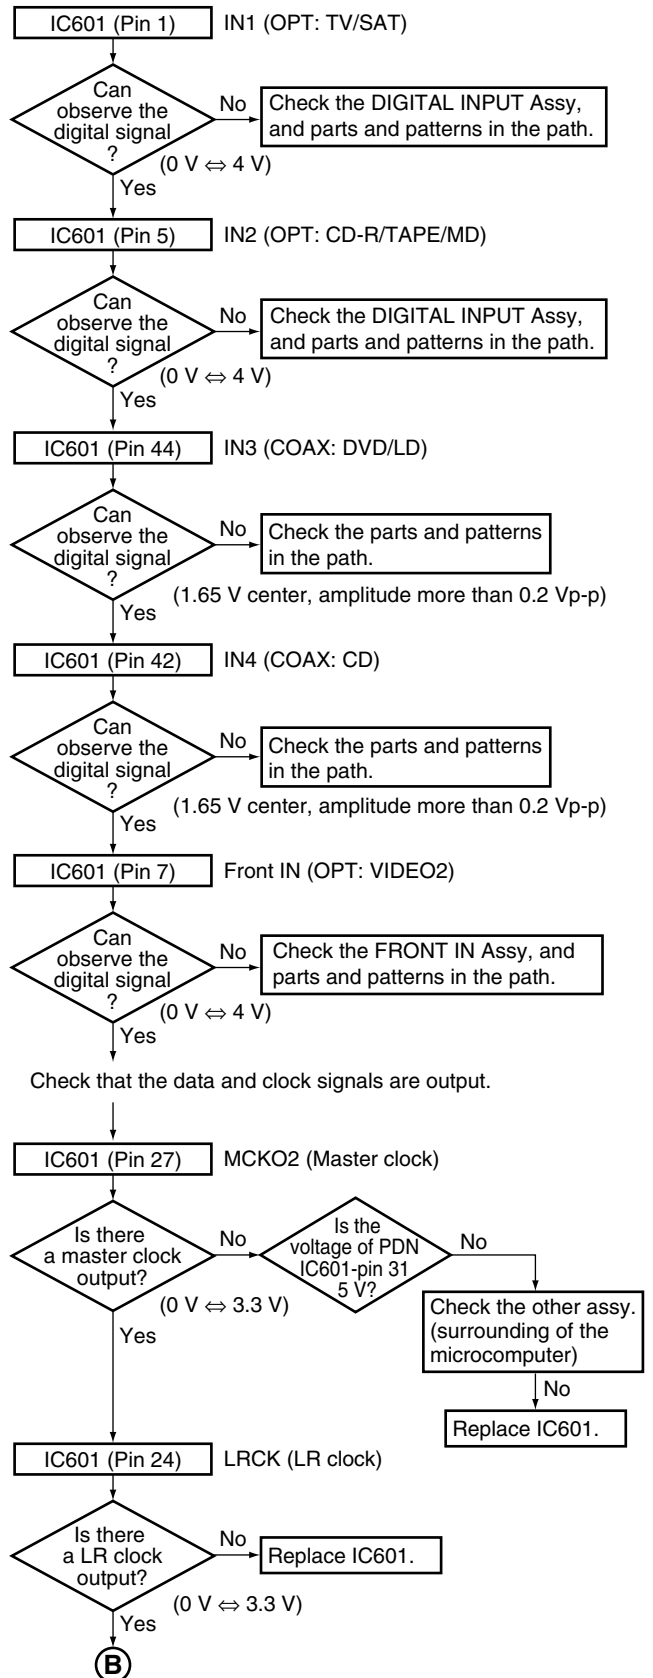

Step 5: X'tal

Step 6: DIR

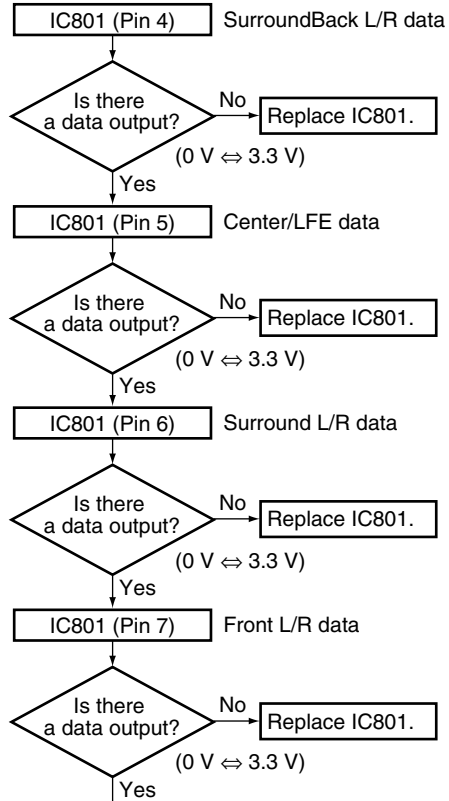

Check that the SPDIF signal is output.
Check that changes by pulling out and inserting the digital input lines.

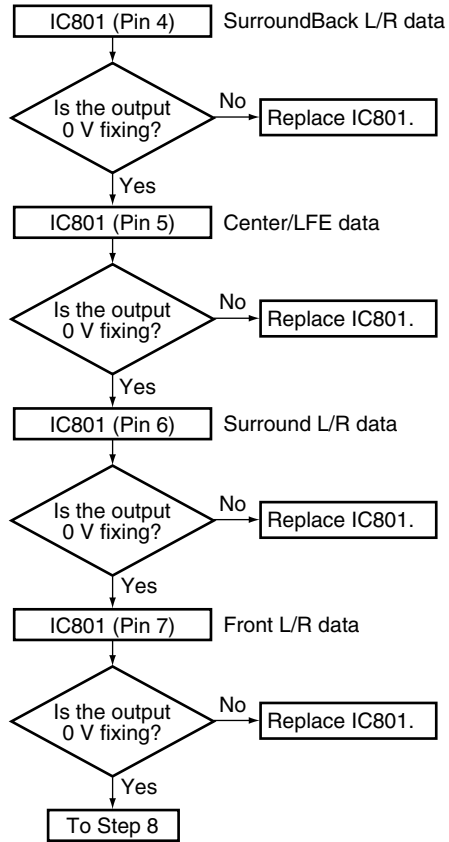

Step 7: DSP output (digital)

Digital output of each CH when inputting the digital signal with audio.

Digital output of each CH when inputting the digital signal (-∞ dB (no audio)).

Step 8: Codec output (analog)

Analog output of each CH when inputting the digital signal with audio.

Analog output of each CH when inputting the digital signal (-∞ dB (no audio)).

Troubleshooting in the MCACC mode

- When the MCACC mode is turned on (SurroundBack is not output by setting.)
- Suppose CR to be poor contact and that is not damaged.
- This shows failure analysis of DSP Assy.

Step 0: Preliminary confirmation

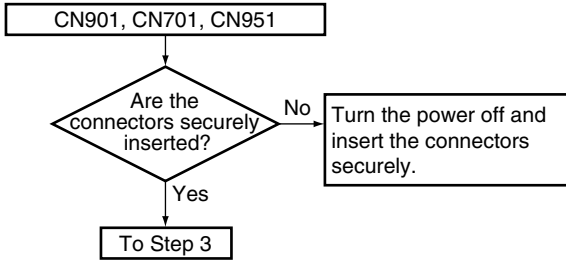

Confirm the following items before checking

Step 1: MUTE pin

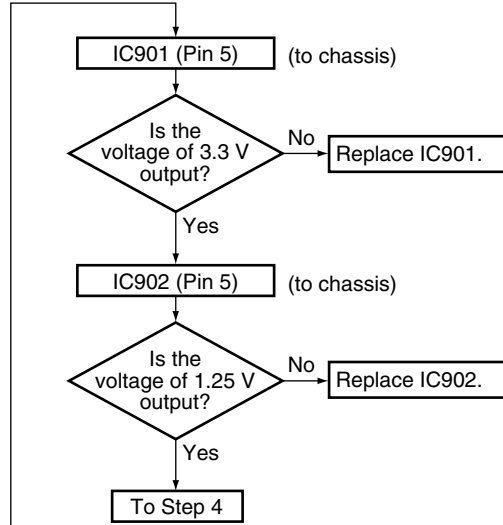

Step 2: BtoB connector

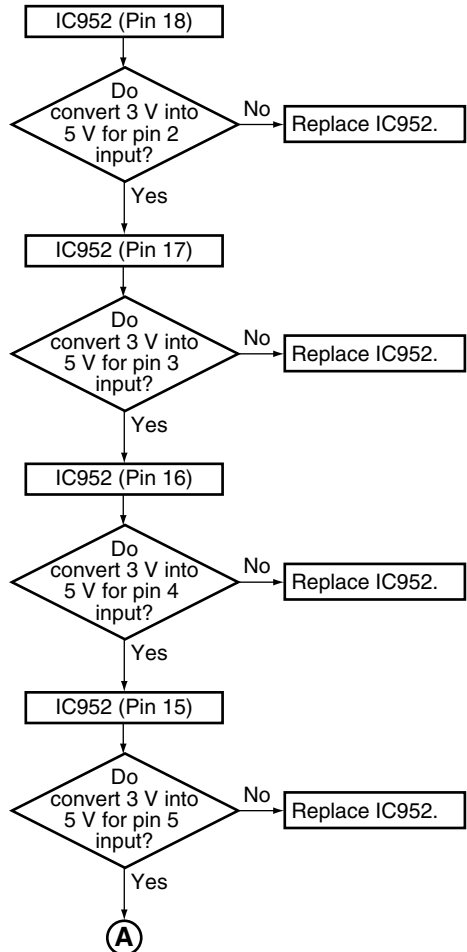

Step 3: Regulator IC

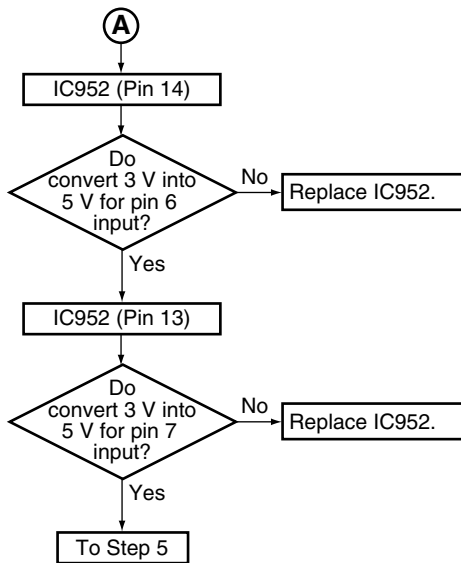

Part shape and Pin arrangement of IC901 and IC902

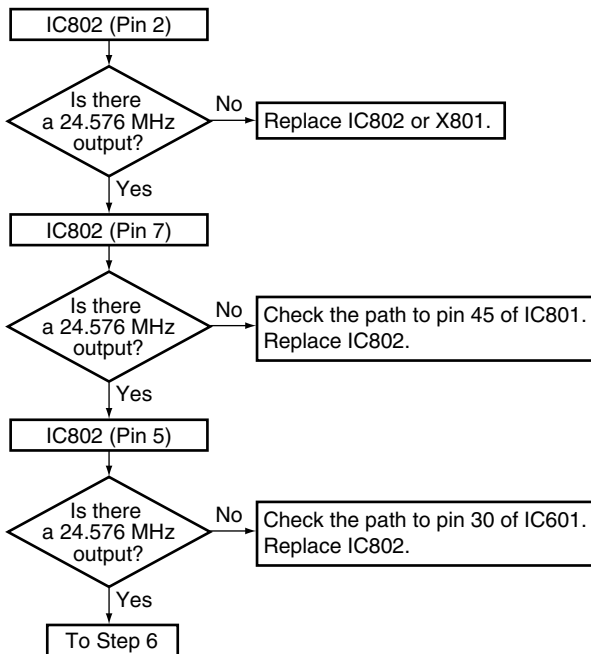

Step 4: 3 V to 5 V conversion

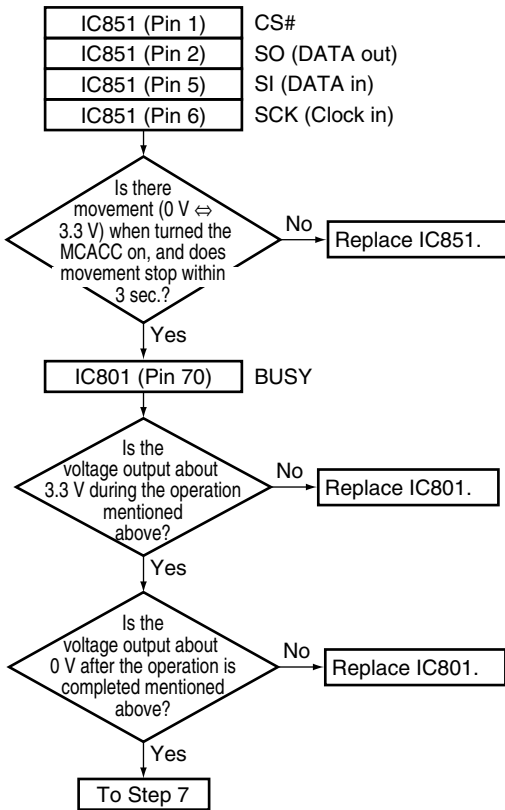

Step 5: X'tal

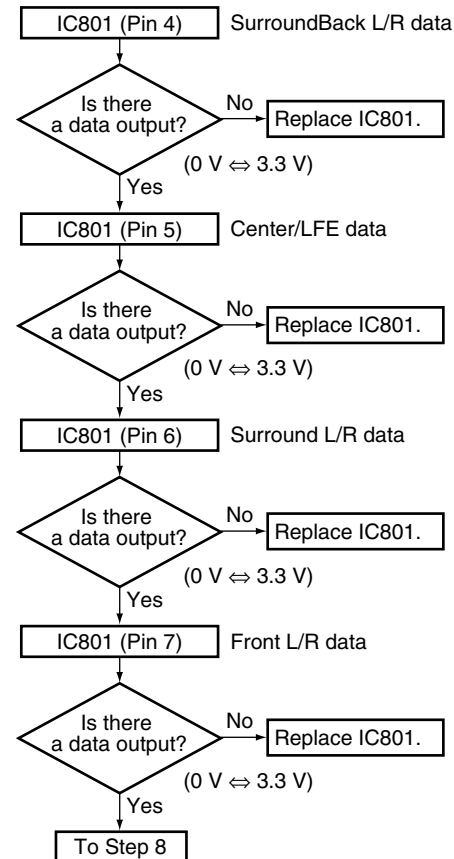

Step 6: ROM

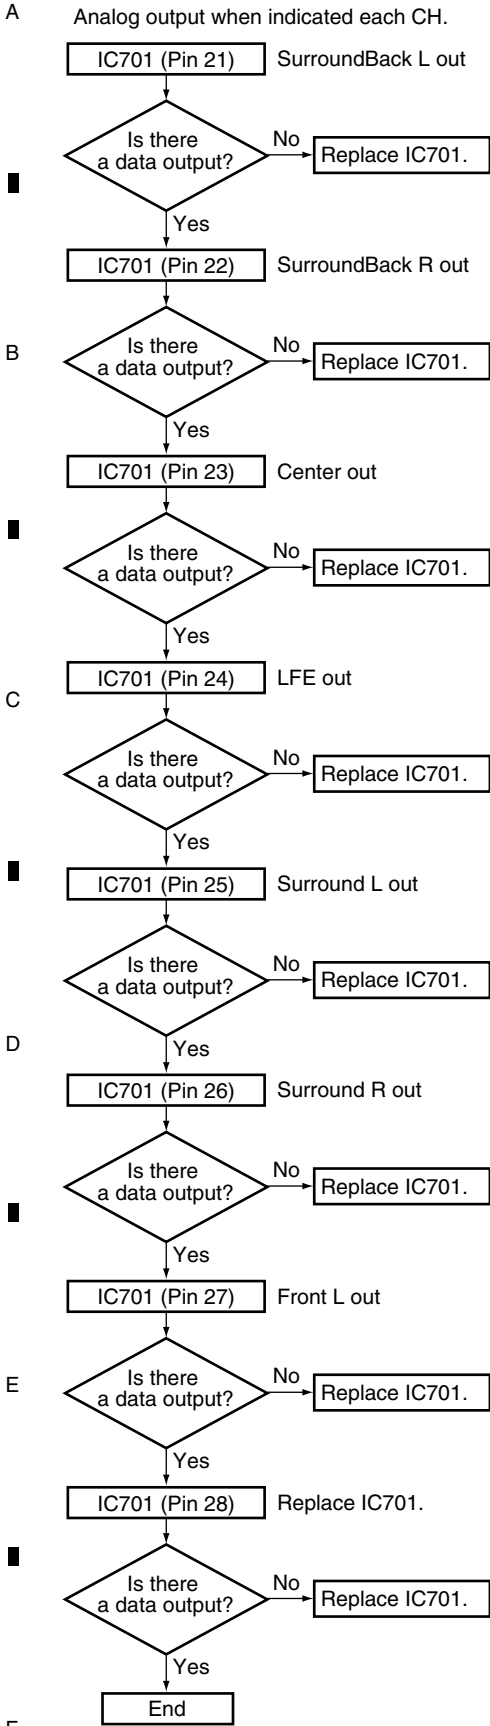

Step 7: DSP output (digital)

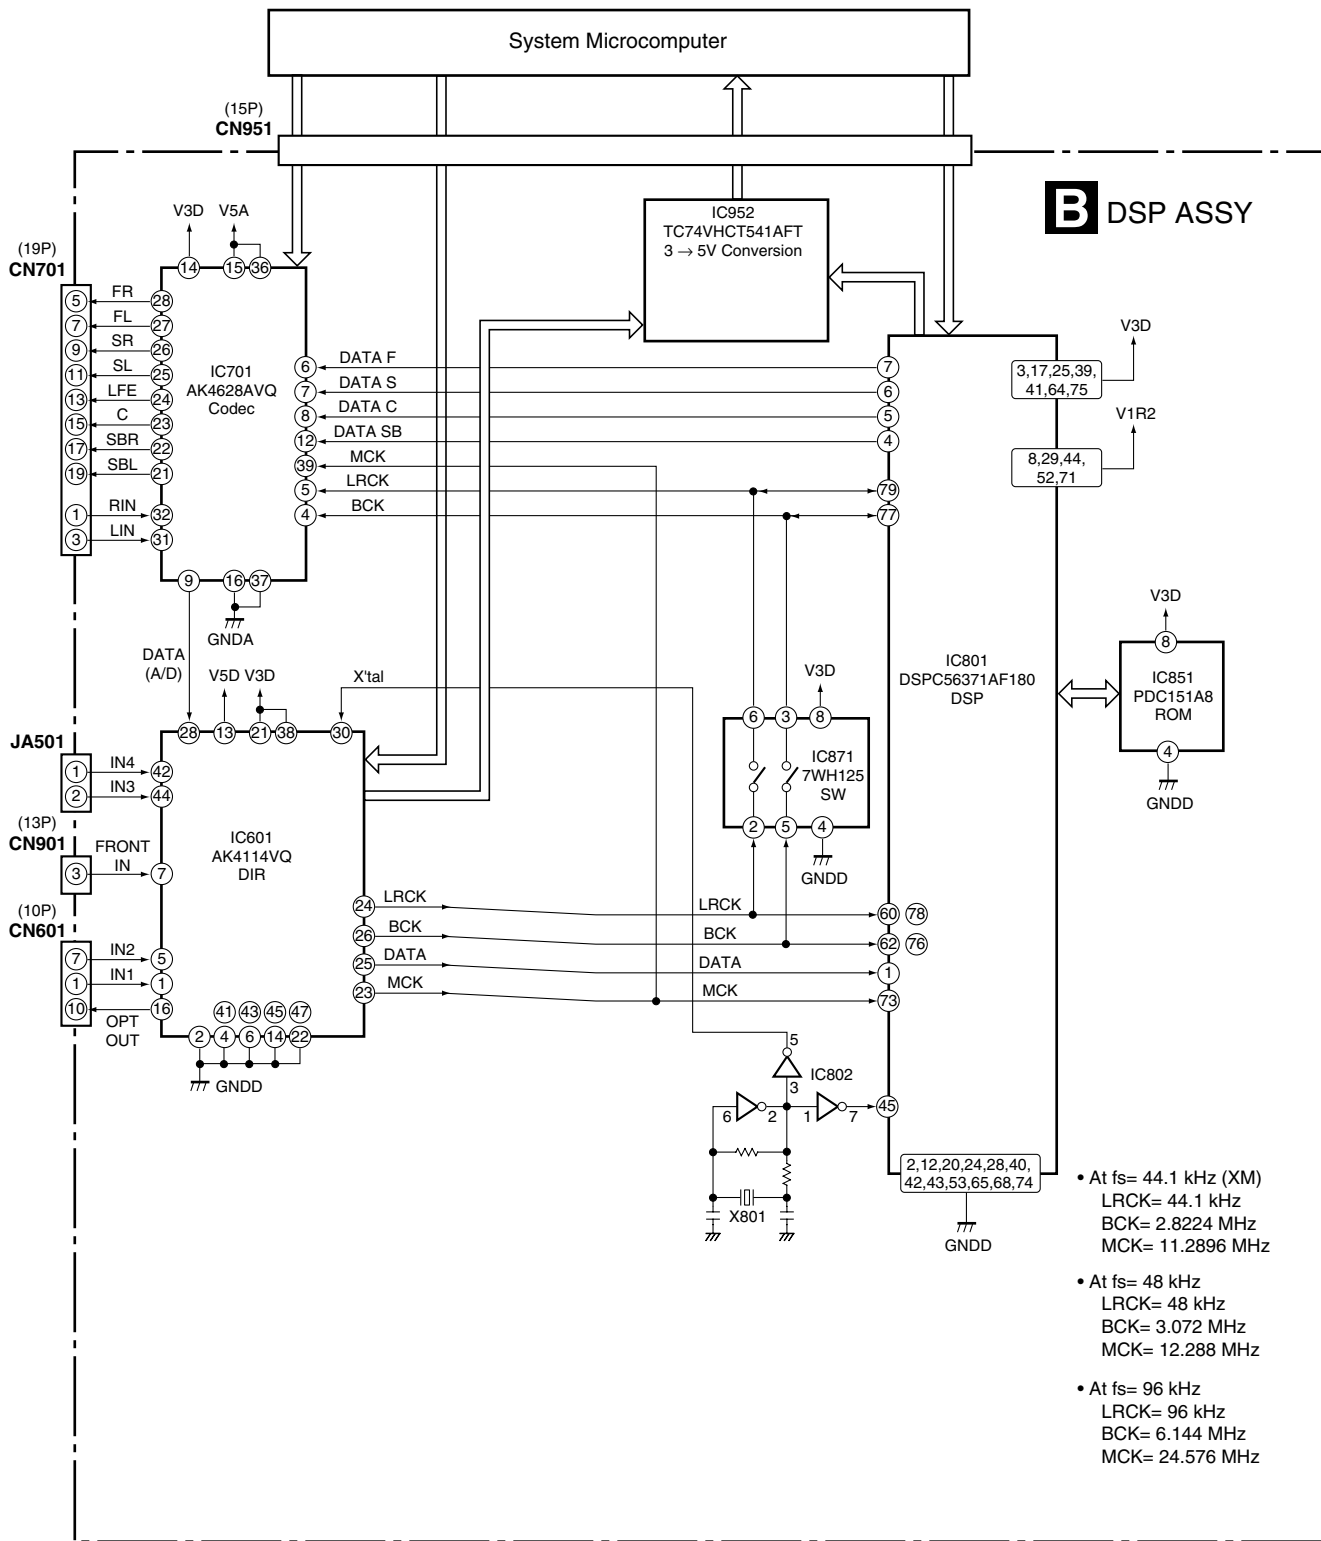

Digital output when indicated each CH.

Step 8: CODEC output (analog)

7.1.2 HDMI TROUBLESHOOTING (VSX-917V ONLY)

HDMI Simple Diagnosis

Please refer to the one point trouble shooting first before checking the flow chart on the next page.

HDMI

Symptom	Remedy
No picture or sound.	<ul style="list-style-type: none"> If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.
No picture.	<ul style="list-style-type: none"> Depending in the output settings of the source component, it may be outputting a video format that can't be displayed. Change the output settings of the source, or connect using the component, S-video or composite jacks.
No sound, or sound suddenly ceases.	<ul style="list-style-type: none"> Since the HDMI audio signal is sent through this receiver to your TV, you need to make separate connections for audio if you want to hear your HDMI component through this system. If you've made separate connections for audio, make sure you have assigned the analog/digital jack(s) to the corresponding HDMI input for the component. Check the audio output settings of the source component.

Causes for no display or sound from the monitor

7.1.3 DISASSEMBLY

Note: Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

Diagnosis of the Unit

Caution:
Heatsink section in work becomes hot, and be careful with it.

- ① Remove the bonnet by removing the six screws.
- ② Remove the two screws.
- ③ Remove the four screws.
- ④ Remove the push rivet.
- ⑤ Release the three binders.
- ⑥ Remove the BIND Assy by removing the one screw.

- ⑦ Remove the one screw.

⑧ Arrange the unit as shown in the photo below.

Caution:

During diagnosis, be sure NOT to remove the three screws marked Ⓐ in the above photo. There is the case that a product does not work normally when removes these screws.

Symbol	Pin Description	Function
SCK	Serial clock	To control the timing of serial data input and output. To latch input data and addresses synchronously at the rising edge of SCK, and read out Output data synchronously at the falling edge.
SI	Serial data input	To input data or addresses serially from MSB to LSB (Least Significant Bit).
SO	Serial data input	To output data serially from MSB to LSB.
CS#	Chip select	To activate the device when this pin is LOW. To deselect and put the device to standby mode when this pin is HIGH.
WP#	Write-protect	To write-protect the Block Protect bits (BP0, BP1) and the Status Register Write Protect bit (SRWP) of the Status Register in co-operation with the Status Register Write Protect bit (SRWP).
HOLD#	Hold	To pause any serial communications with the device without deselecting the device.
VDD	Power supply	To provide from 2.7V to 3.6V supply
VSS	Ground	

7.3 EXPLANATION

7.3.1 DETECTION CIRCUIT

1. DC Derection Circuit Diagram : Example of VSX-917V/KUXJ/CA

2. Overload Detection Circuit Diagram: Example of VSX-917V/KUXJ/CA FRONT Channel

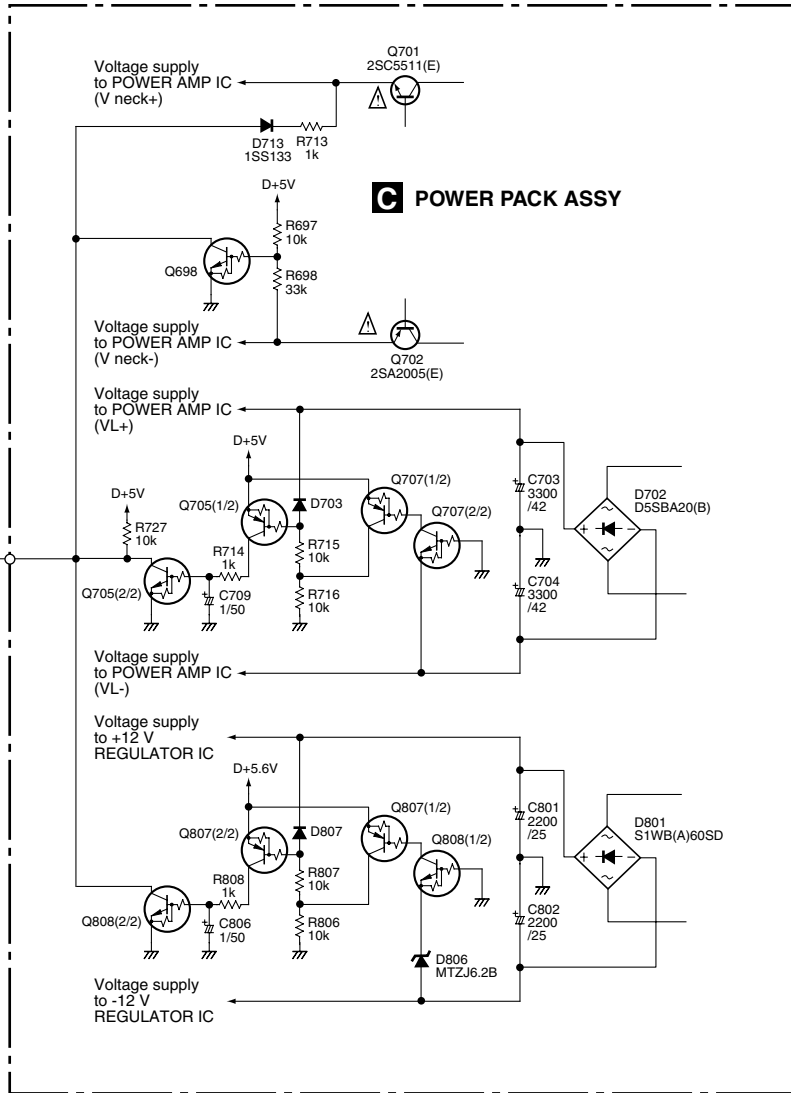

3. Fan Stop Protection Circuit Diagram

4. XPROTECT Detection Circuit Diagram

A When below 6 kind of voltage supply become to be short circuit to GND, XPROTECT circuit work and U-P input port voltage change from +5 V to 0 V. The U-P detect this condition as ERROR.

- Voltage supply to POWER AMP IC (V neck+)
- Voltage supply to POWER AMP IC (V neck-)
- Voltage supply to POWER AMP IC (VL+)
- Voltage supply to POWER AMP IC (VL-)
- Voltage supply to +12 V REGULATOR IC
- Voltage supply to -12 V REGULATOR IC

1. DC-abnormality detection

DC detection is only enabled 2 seconds after power-on.
 If there is a fault in the power amplifier or a high-level signal lower than 5 Hz is input, the DC_DET port becomes "L".
 If the "L" is detected, the microprocessor will perform as following flow chart.

In the case of simultaneous detection with the overload protection circuit, DC-abnormality detection is performed preferentially to overload detection.

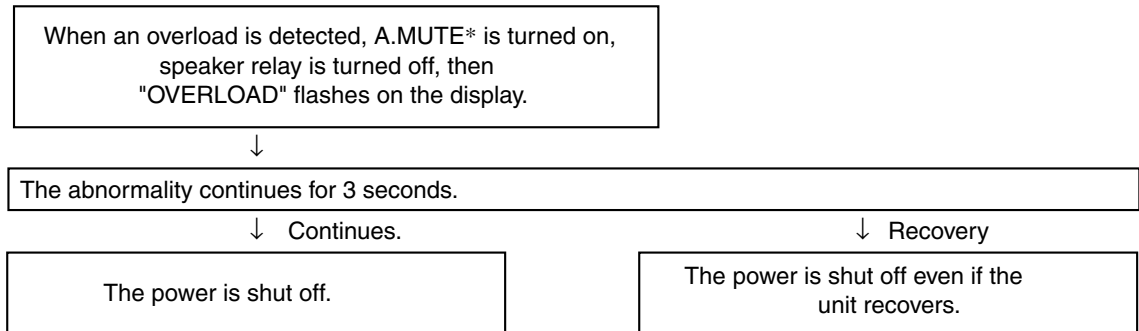

*A.MUTE : Audio mute command

However, when the following keys are pushed so that the key input of a line and the service can be carried out, power can be on.

- ① TESTMODE ON (A55F+A55F)
 - ② When power off, push FRONT ENTER key + AUTO SURR/DIRECT key continuously 2sec.
 (②: When a DC abnormality is detected and the power is shut off.)
- Any other key input from front panel or remote control will not be detected.

2. Overload detection

If the speaker terminals are short-circuited or low-load driving is detected, the OL_DET port becomes "L".
 If the "L" is detected, the microprocessor will perform as following flow chart.

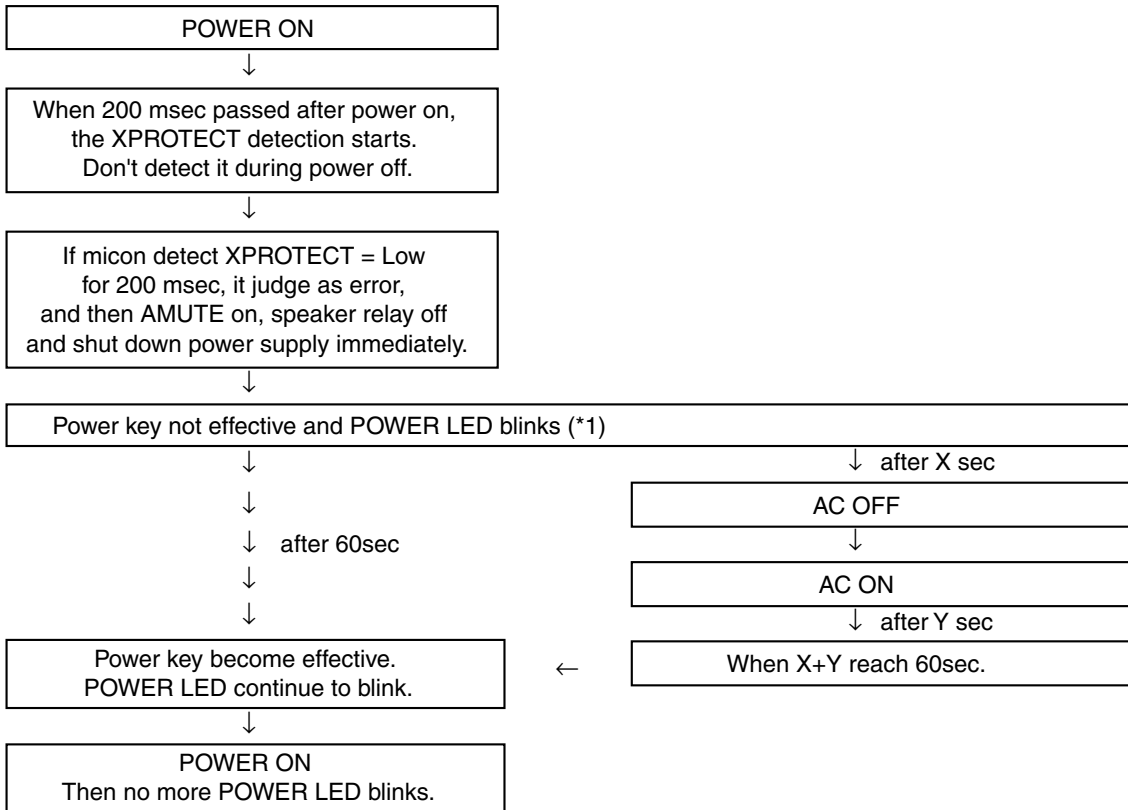

3. XPROTECT detection

XPROTECT is started to be monitored 200msec after power on.

XPROTECT port is checked every 20msec.

If Low level (ERROR) is recognized during consecutive 9 times, micon judge it as XPROTECT ERROR.

It processes more preferentially than DC abnormal detection and overload detection.

(*1) However, when the following keys are pushed so that the key input of a line and the service can be carried out, power can be on.

① TESTMODE ON (A55F+A55F)

② When power off, push FRONT ENTER key + AUTO SURR/DIRECT key continuously 2sec.

(Effective, only when power-off is carried out by DC detection / XPROTECT detection)

Any other key input from front panel or remote control will not be detected.

4. Fan stop detection operation flow in the XPROTECT detection

If the fan is forcibly stopped or become out of order, the 'XPROTECT' port becomes "L". Then an abnormality of fan is detected.

- Detection routine and recovery is same as "3. XPROTECT detection".

7.3.3 AMPLIFIER FAILURE DIAGNOSIS FLOW CHART

■ Amplifier failure diagnosis flow chart

When DC detection is activated ("AMP_ERR" flashes on the display), failure (damage) of the power amplifier section is considered.

Caution:

When releasing the lock state of power key before repair, please be careful because there is the possibility that more damages will occur when turning on the power once again!

• According to a symptom, perform the following confirmation beforehand.

1) Are there any Fuses and IC protectors open?

↓

2) After turn on the power, confirm that the supply voltage of the point that can be measured is appropriate. (Particularly the supply voltage of the power Tr and drive step)

↓

3) Whether the voltage of pin2 and pin5 of IC601, IC602 or IC603 is equal to (VL-0.7V). If not (eg, equal to VH), then change the corresponding power pack IC601, IC602 or IC603.

↓

4) Furthermore, check the output DC voltage of each channel of power pack IC601, IC602 and IC603 to limit the failure channel and identify the defect power pack.

↓

• After identify the failure channel, check that each part is not damaged (resistor, diode... etc. value / open / short)

Front panel (VSX-917V)

1 Input select buttons

Press to select an input source.

2 Digital Precision Processing indicator

Lights to indicate digital processing.

3 Character display

See Display.

4 MCACC indicator

Lights when Acoustic Calibration EQ is on (Acoustic Calibration EQ is automatically set to **ALL CH ADJUST** after the Auto MCACC Setup or EQ Auto Setup).

5 ENTER

6 MULTI JOG dial

Use the **MULTI JOG** dial to select various settings and menu options.

7 PHONES jack

Use to connect headphones (when connected, there is no sound output from the speakers).

8 \odot STANDBY/ON

Switches the receiver between on and standby.

9 VIDEO INPUT

See Connecting to the front panel video terminal.

10 USB terminal

See Using the USB interface.

11 MCACC/AUDIO IN jack

Use to connect a microphone when performing Auto MCACC setup, or connect an auxiliary component using a stereo mini-jack cable.

12 MASTER VOLUME dial

13 **PHASE CONTROL**
Press to switch on/off Phase Control.

14 ACOUSTIC EQ

Press to select an Acoustic Calibration EQ setting.

15 LISTENING MODE buttons

AUTO SURR/DIRECT

Selects Auto Surround (Auto playback) or Stream Direct playback.

STEREO/F.S.SURR - Switches between stereo playback and Front Stage Surround Advance modes.

STANDARD - Press for Standard decoding and to switch between the various Pro Logic IIx and Neo:6 options.

ADVANCED SURR - Use to switch between the surround modes.

16 SOUND RETRIEVER

Press to restore CD quality sound to compressed audio sources.

17 MIDNIGHT/LOUDNESS

Switches between Midnight and Loudness listening.

18 SIGNAL SELECT

Use to select an input signal.

19 TONE

Press this button to access the bass and treble controls, which you can then adjust with the **MULTI JOG** dial.

20 SPEAKERS

Use to change the speaker system and the impedance setting.

21 PTY SEARCH

Use this button to search for RDS program types.

22 TUNING/STATION

Selects the frequency and station presets when using the tuner.

23 TUNER EDIT

Press to memorize and name a station for recall.

24 System Setup menu controls

SETUP - Use with the **MULTI JOG** dial to access the System Setup menu.

RETURN - Press to confirm and exit the current menu.

1 SIGNAL indicators

Lights to indicate the type of input signal:

AUTO - Lights when **AUTO** signal select is on.

SB - Depending on the source, this lights when a signal with surround back channel encoding is detected.

DIGITAL - Lights when a digital audio signal is detected.

DIGITAL - Lights when a Dolby Digital encoded signal is detected.

ANALOG - Lights when an analog signal is detected.

DTS - Lights when a source with DTS encoded audio signals is detected.

2 **DTS**

Lights to indicate decoding of a DTS multichannel signal.

3 **DIGITAL**

Lights to indicate decoding of a Dolby Digital multichannel signal.

4 **PRO LOGIC IIx**

PRO LOGIC II lights to indicate Pro Logic II decoding. **PRO LOGIC IIx** lights to indicate Pro Logic IIx decoding (see Listening in surround sound).

5 **VIR.SB**

Lights during Virtual surround back processing.

6 **DIRECT**

Lights when source Stream Direct playback is in use. Direct playback bypasses the tone controls for the most accurate reproduction of a source.

7 **AUTO SURR.**

Lights when Auto Surround (see Auto playback) is on.

8 **ATT**

Lights when **ANALOG ATT** is used to attenuate (reduce) the level of the analog input signal.

9 **SLEEP**

Lights when the sleep mode is active (see Remote control below).

10 Tuner indicators

○ - Lights when the mono mode is set using the **MPX** button.

⊕ - Lights when a stereo FM broadcast is being received in auto stereo mode.

Ψ - Lights when a broadcast is being received.

11 EON/RDS indicators

EON - Lights when the EON mode is set, and flashes during an EON broadcast. The ○ indicator lights when the current station carries the EON service.

RDS - Lights when an RDS broadcast is received.

12 Speaker indicators

Lights to indicate the current speaker system, **A** and/or **B**.

13 Character display

14 Neo:6

Lights to indicate Neo:6 processing.

15 **ADV.SURR. (Advanced Surround)**

Lights when one of the Advanced Surround modes has been selected.

16 **WMA9 Pro**

Lights to indicate decoding of a WMA9 Pro signal.

17 **MIDNIGHT**

Lights during Midnight listening.

18 **D.E.**

Lights when Dialog Enhancement is switched on.

19 **LOUDNESS**

Lights during Loudness listening.

20 **EX**

Lights when a Dolby Digital Surround EX encoded signal is detected.

21 **Master volume level**

Shows the overall volume level.

22 **MCACC channel EQ/Sound Retriever indicators**

These indicators show the EQ balance for each channel in Checking your Acoustic Calibration EQ settings. Also, **L** and **R** light when the Sound Retriever is active.

Remote control (VSX-917V)

1 RECEIVER

This switches between standby and on for this receiver.

2 MULTI CONTROL buttons

Press to select control of other components

3 Number buttons and other receiver/component controls

Use the number buttons to directly select a radio frequency or the tracks on a CD, DVD, etc.

DISC (ENTER) can be used to enter commands for TV or DTV, and can also be used to select a disc in a multi-CD player.

The following are accessed by pressing the **RECEIVER** button first:

SLEEP - Press to change the amount of time before the receiver switches into standby (**90 min - 60 min - 30 min - Off**). You can check the remaining sleep time at any time by pressing **SLEEP** once.

SB ch - Selects the surround back channel mode or virtual surround back mode.

ANALOG ATT - Attenuates (lowers) the level of an analog input signal to prevent distortion.

SR + - Switches the SR+ mode on/off.

DIMMER - Dims or brightens the display.

MIDNIGHT - Use Midnight when listening to movie soundtracks at low volume. Use Loudness to boost the bass and treble at low volume.

SIGNAL SEL - Use to select an input signal.

D.ACCESS - After pressing, you can access a radio station directly using the number buttons.

CLASS - Switches between the three banks (classes) of radio station presets.

4 Tuner/component control buttons/SETUP

The following button controls (except **SETUP**) can be accessed after you have selected the corresponding **MULTI CONTROL** button (**DVD, FM, AM, TV**, etc.).

TOP MENU - Displays the disc "top" menu of a DVD.

MENU - Displays the disc menu of DVD-Video discs. It also displays TV and DTV menus.

T.EDIT - Press to memorize and name a station for recall.

SETUP (Press **RECEIVER** first to access) - Use to access the System Setup menu.

PTY SEARCH - Use this button to search for RDS program types.

GUIDE - Displays the guides on a digital TV.

RETURN - Press to confirm and exit the current menu (also use to return to the previous menu with DVDs or to select closed captioning with DTV).

5 ◀▶↕ (TUNE/ST +/-) /ENTER

Use the arrow buttons when setting up your surround sound system. Also used to control DVD menus/options and for deck 1 of a double cassette deck player. Use the **TUNE** ↓/↑ buttons to find radio frequencies and use **ST** ◀/▶ to find preset stations.

6 TV CONTROL buttons

These buttons are dedicated to control the TV assigned to the **TV CTRL** button. Thus if you only have one TV to hook up to this system assign it to the **TV CTRL MULTI CONTROL** button. If you have two TVs, assign the main TV to the **TV CTRL** button.

TV ⏻ - Use to turn on/off the TV power.

TV VOL +/- - Use to adjust the TV volume.

INPUT SELECT - Use to select the TV input signal.

TV CH +/- - Use to select channels.

7 Component control buttons

The main buttons (▶, ■, etc.) are used to control a component after you have selected it using the **MULTI CONTROL** buttons.

The controls above these buttons can be accessed after you have selected the corresponding **MULTI CONTROL** button (for example **DVD**, **DVR** or **TV** (when connected to a DTV)).

DTV ON/OFF - Switches a digital TV on/off.

MPX - Switches between stereo and mono reception of FM broadcasts. If the signal is weak then switching to mono will improve the sound quality.

EON - Use to search for programs that are broadcasting traffic or news information.

AUDIO - Changes the audio language or channel on DVD discs.

DISP - Switches between named station presets and radio frequencies.

SUBTITLE - Displays/changes the subtitles included in multilingual DVD-Video discs.

CH +/- - Use to select channels when using a TV, VCR, DVR, etc.

The following DVR controls can be accessed by pressing **SHIFT**:

● **REC** - Starts recording.

REC STOP - Stops recording.

JUKEBOX - Switches to the Jukebox feature.

HDD/DVD - These buttons switch between the hard disk and DVD controls for DVD/HDD recorders.

8 RECEIVER CONTROL buttons

AUTO SURR - Selects Auto Surround (Auto playback) or Stream Direct playback.

STEREO/F.S.SURR - Switches between stereo playback and Front Stage Surround Advance modes.

STANDARD - Press for Standard decoding and to switch between the various Pro Logic IIx and Neo:6 options.

ADV.SURR. - Use to switch between the various surround modes.

PHASE - Press to switch on/off Phase Control.

ACOUSTIC EQ - Press to select an Acoustic Calibration EQ setting.

DIALOG - Use to make dialog stand out when watching TV or a movie.

SOUND RETRIEVER - Press to restore CD quality sound to compressed audio sources.

9 SHIFT

Press to access the DVR controls (above the component control buttons) as well as some receiver controls.

10 INPUT SELECT

Use to select the input source (use **SHIFT** for **INPUT SELECT** ).

11 ⏻ SOURCE

Press to turn on/off other components connected to the receiver.

12 Character display (LCD)

This display shows information when transmitting control signals.

The following commands are shown when you're setting the remote to control other components (see Controlling the rest of your system):

SETUP - Indicates the setup mode, from which you choose the options below.

PRESET - See Selecting preset codes directly.

DIRECT F - See Direct function.

ERASE - See Erasing one of the remote control button settings.

RESET - See Erasing all of the remote control presets.

READ ID - See Confirming preset codes.

13 RECEIVER

Switches the remote to control the receiver (used to select the green commands above the number buttons (**DIMMER**, etc)). Also use this button to set up surround sound.

14 VOL +/-

Use to set the listening volume.

15 MUTE

Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).

16 EFFECT/CH SEL

Press repeatedly to select a channel, then use +/- to adjust the level (see Tip). Also adjusts the level of the Advanced Surround effects, Dolby Pro Logic IIx Music, and Neo:6 Music parameters. You can then use the +/- buttons to make these adjustments.

Using this receiver with a Pioneer plasma display

If you have a Pioneer plasma display², you can use an SR+ cable to connect it to this unit and take advantage of various convenient features, such as automatic video input switching of the plasma display when the input is changed.

SERVICE PARTS

This receiver

- Use a 3-ringed miniplug SR+ cable¹ to connect the CONTROL IN jack of this receiver with the CONTROL OUT of your plasma display.

Before you can use the extra SR+ features, you need to make a few settings in the receiver. See SR+ Setup for Pioneer plasma displays for detailed instructions.

To make the most of the SR+ features, you should connect your source components (DVD player, etc.) in a slightly different way to that described in this chapter. For each component, connect the video output directly to the plasma display, and just connect the audio (analog and/or digital) to this receiver.

Note

¹ The 3-ringed SR+ cable from Pioneer is commercially available under the part number ADE7095. Contact the Pioneer Customer Support division for more information on obtaining an SR+ cable (you can also use a commercially available 3-ringed mini phone plug for the connection).

If you connect to a Pioneer plasma display using an SR+ cable, you will need to point the remote control at the plasma display remote sensor to control the receiver. In this case, you won't be able to control the receiver using the remote control if you switch the plasma display off.

² The automatic volume muting feature is enabled separately; see SR+ Setup for Pioneer plasma displays.

Using the SR+ mode with a Pioneer plasma display

When connected using an SR+ cable, a number of features become available to make using this receiver with your Pioneer plasma display even easier. These features include:

- On-screen volume display.
- On-screen display of listening mode.
- Automatic video input switching on the plasma display.
- Automatic volume muting on the plasma display.¹

See also SR+ Setup for Pioneer plasma displays for more on setting up the receiver.

- 1 Make sure that the plasma display and this receiver are switched on and that they are connected with the SR+ cable.

See Using this receiver with a Pioneer plasma display above for more on this.

- 2 To switch SR+ mode on/off, press RECEIVER, then the SR+ button.

The front panel display shows SR+ ON or OFF.
