MULTI CD DOUBLE DECK AMPLIFIER
XD-J115M

CD DOUBLE DECK AMPLIFIER
XD-J110

XD−J115M AND XD−J110 HAVE THE FOLLOWING :

Type	Model		Power Requirement	Remarks
	XD−J115M	XD−J110		
HE	○	○	AC220V−230V, 240V (Switchable)*	
HB	○	○	AC220V−230V, 240V (Switchable)*	
HEWZIW	○	○	AC220V−230V, 240V (Switchable)*	

* Change the connection of the power transformer's primary wiring.

- **This manual is applicable to the following : XD−J115M/HE, HB and HEWZIW ; XD−J110/HE, HB and HEWZIW.**
- **For the following : XD−J115M/HB and HEWZIW ; XD−J110/HB and HEWZIW, refer to page 113.**
- **These products are systems components.**
  Each of these products does not function properly when independent ; to avoid malfunctions, be sure to connect it to the prescribed system component (s), otherwise damage may result.

1. SAFETY INFORMATION

(FOR EUROPEAN MODEL ONLY)

VARO!
AVATTAESSA JA SUOJALUKITUS OHITETTAESSA OLET ALTTIINA NÄKYMÄTTÖMÄLLE LASERSÄTEILYLLE. ÄLÄ KATSO SÄTEESEEN.

ADVERSEL:
USYNLIG LASERSTRÅLING VED ÅBNING NÅR SIKKERHEDSAFBRYDERE ER UDE AF FUNKTION UNDGÅ UDSAETTELSE FOR STRÅLING.

VARNING!
OSYNLIG LASERSTRÅLNING NÄR DENNA DEL ÄR ÖPPNAD OCH SPÄRREN ÄR URKOPPLAD. BETRAKTA EJ STRÅLEN.

LASER
Kuva 1
Lasersäteilyn varoitusmerkki

WARNING!
DEVICE INCLUDES LASER DIODE WHICH EMITS INVISIBLE INFRARED RADIATION WHICH IS DANGEROUS TO EYES. THERE IS A WARNING SIGN ACCORDING TO PICTURE 1 INSIDE THE DEVICE CLOSE TO THE LASER DIODE.

IMPORTANT
THIS PIONEER APPARATUS CONTAINS LASER OF CLASS 1.
SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUCTED PERSON.

LASER DIODE CHARACTERISTICS
MAXIMUM OUTPUT POWER: 5 mw
WAVELENGTH: 780-785 nm

LASER

Additional Laser Caution

1. Laser Interlock Mechanism
   The ON/OFF (ON : low level, OFF : high level) status of the LSP1 (S601) and LSP2 (S602) switches for detecting the loading state is detected by the system microprocessor, and the design prevents laser diode oscillation when both switches LSP1 and LSP2 are not ON (low level) (clamped state).
   Thus, interlock will no longer function if switches LSP1 (S601) and LSP2 (S602) are deliberately shorted.
   The interlock also does not operate in the test mode*.
   Laser diode oscillation will continue, if pin 1 of M51593FP (IC101) on the preamplifier board loaded on pick up assembly are connected to GND, or pin 19 is connected to low level (ON), or else the terminals of Q101 are shorted to each other (fault condition).

2. When the cover is opened with the servo mechanism block removed to be turned over, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

92M1A

* Refer to page 94.

LABEL CHECK (SINGLE MAGAZINE type)

HB type

Additional Laser Caution

1. Laser Interlock Mechanism
   The position of the switch (S601) for detecting loading completion is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch (S601) is not in $\overline{CLMP}$ terminal side (when $\overline{CLMP}$ signal is OFF, that is high level).
   Thus, the interlock will no longer function if the switch (S601) is deliberately connected to ground (low level). The interlock also does not operate in the test mode*.
   Laser diode oscillation will continue, if pins 1 and 2 of M51593FP (IC101) on the preamplifier board loaded on pick up assembly are connected to GND, or pin 19 is connected to low level (ON), or else the terminals of Q101 are shorted to each other (fault condition).

2. When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 or higher laser beam.

* Refer to page 103.

LITHIUM BATTERY NOTICE

WARNING!
Lithium batteries. Danger of explosion. Replacement must be done by qualified personnel and only by following the instructions given in the service manual.

This warning is stated on the product or in the operating instructions. When replacing the lithium batteries, follow the note below.
Dispose of the used battery promptly. Keep away from children. Do not disassemble and do not dispose of in fire.
The battery used in this device may present a fire or chemical hazard if mistreated. Do not recharge, disassemble, heat above 100°C or incinerate. Replace only with the same Part Number. Use of another battery may present a risk of fire or explosion.

Note: The lithium battery installation position is shown in the exploded view and the P.C. board pattern.

ADVARSEL!
Lithiumbatteri — Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandøren.

Denne advarsel or angivet på produktet eller i brugsvejledningen. Ved udskiftning af lithium batterierne følges nedenstående anveisning.
Batterierne må kun udskiftes med batterier af samme type og mærke.

VARNING
Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.

Denna varning finns på apparaten eller i bruksanvisningen. Följ nedanstående anvisningar vid byte av litiumbatterier.
Batterierna får endast bytas ut mot litiumbatterier av samma typ och fabrikat.

2. EXPLODED VIEWS, PACKING AND PARTS LIST

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*

	44	DC motor assembly (CARRIAGE)	PEA1246

• How to install the disc table

1 Use nipper or other tool to cut the three sections marked Ⓐ figure 1. Then remove the spacer.

2 While supporting the spindle motor shaft with the stopper, put spacer on top of the motor base (angled so it doesn't touch section Ⓑ),and stick the disc table on top (takes about 9Kg pressure). Take off the spacer.

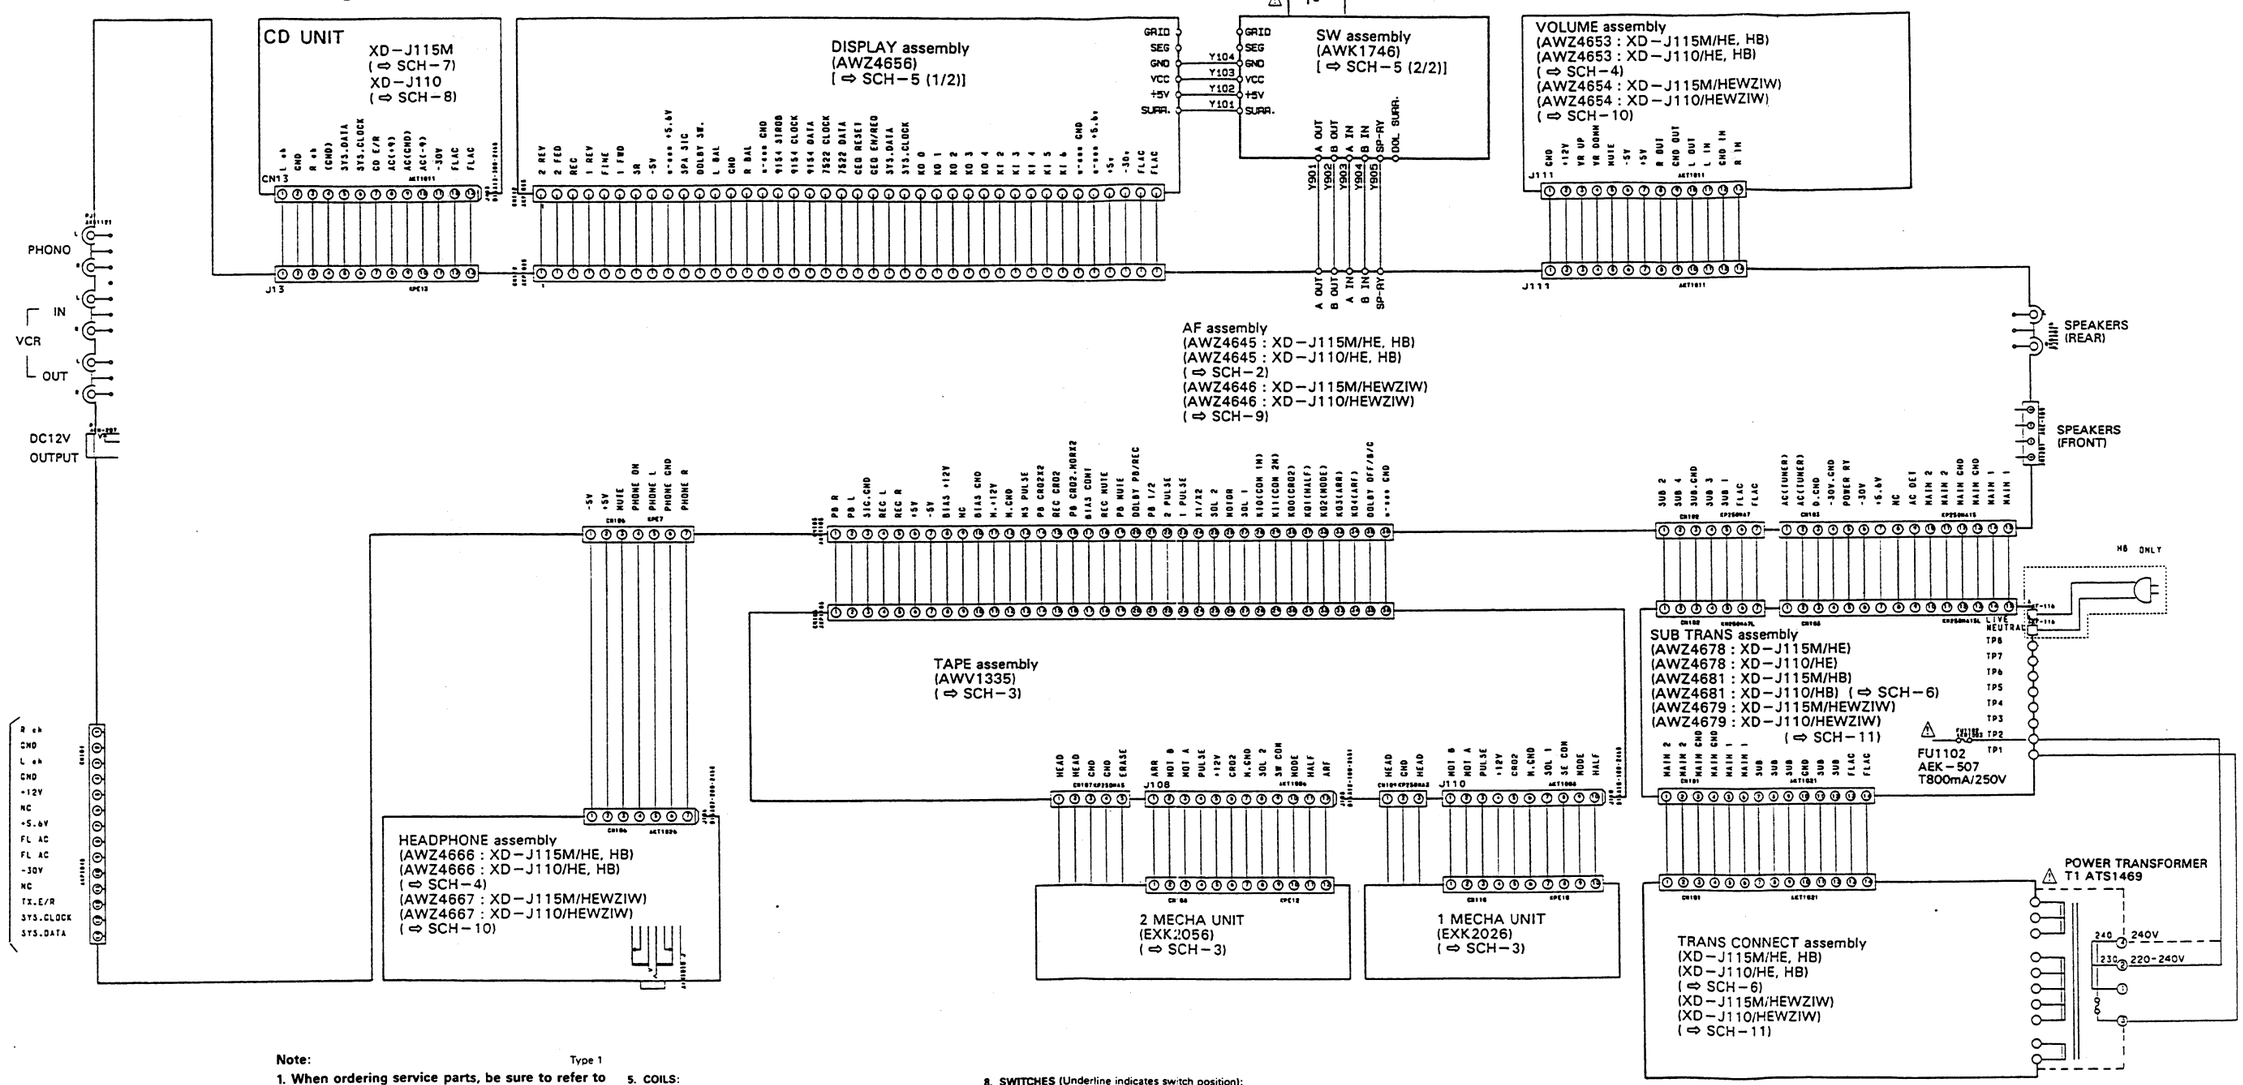
4.1.1 Overall Schematic Diagram



Note: Type 1

1. **When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".**
2. **Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.**
3. **RESISTORS:**
   Unit: k:kΩ, M:MΩ, or Ω unless otherwise noted.
   Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
   Tolerance: (F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.
4. **CAPACITORS:**
   Unit: p:pF or μF unless otherwise noted.
   Ratings: capacitor (μF)/ voltage (V) unless otherwise noted.
   Rated voltage: 50V except for electrolytic capacitors.
5. **COILS:**
   Unit: m:mH or μH unless otherwise noted.
6. **VOLTAGE AND CURRENT:**
   V : Signal voltage at rated output.
   ⟶ : DC voltage (V) at no input signal unless otherwise noted. Value in ( ) is DC voltage at rated power.
   ⇦ mA or − mA : DC current at no input signal unless otherwise noted.
7. **OTHERS:**
   - ➡ : Signal route.
   - ⊘ : Adjusting point.
   - ▼ : Measurement point.
   - The △ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.
8. **SWITCHES** (Underline indicates switch position):

Line Voltage Selection

Line voltage can be changed with the following steps.

1. Disconnect the AC Power cord.
2. Remove the top cover.
3. Change the connection with the power transformer (T1) primary taps.
4. Stick the line voltage label on the rear panel.

5. PCB PARTS LIST

NOTES :

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*
- *When ordering resistors, first convert resistance values into code form as shown in the following examples.*

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω → 56 × 10¹ → 561 ····· RD1/8PM 3 6 1 J
47kΩ → 47 × 10³ → 473 ····· RD1/4PS 4 7 3 J
0.5Ω → 0R5 ····· RN2H C R 5 K
1Ω → 010 ····· RS1P C J 0 K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ → 562 × 10¹ → 5621 ····· RM1/4PC 3 6 2 1 F

6. ADJUSTMENTS

6.1 DECK AMP BLOCK (XD-J115M AND XD-J110)

6.1.1 Adjustment of Mechanical Section

- The adjustment location and the measuring location, refer to Fig. 6-4.
- Set the function switch to "TAPE".
- Test tape : STD-301 (3kHz 30min)

1. Adjustment of tape speed

No.	Mode	Input signal & Test tape	Adjustment location		Measuring location	Adjustment value	Remarks
1	PLAY	Playback the STD-301 tape to 3kHz.	Deck I	TAPE assembly VR4901	JP-L (Lch)	Press the PLAY button and adjust the frequency to 3010Hz ±10Hz. Make sure that the wow and flutter is 3010Hz ±55Hz.	
2	PLAY (Double speed mode)			—		Press the PLAY button in double speed mode and confirm that the frequency is 6000Hz ±1000Hz. Note down the figure.	Release the double speed mode after adjustment.
3	PLAY (Double speed mode)		Deck II	TAPE assembly VR4903	JP-L (Lch)	Press the PLAY button in double speed mode and adjust the frequency to be within ±30Hz of the figure recorded at step No. 2.	Release the double speed mode after adjustment.
4	PLAY			TAPE assembly VR4902		Press the PLAY button and adjust the frequency to 3010Hz ±10Hz. Make sure that the wow and flutter is 3010Hz ±55Hz.	

Double-speed mode : The double-speed mode can be entered by short circuiting the line between TP4901 and TP4902. The mode is canceled by opening the short circuited line and switching the power to OFF.

6.1.2 Adjustment of Electrical Section

■ Check and conduct the following before adjusting the electric section.

1. Adjustment of tape speed has been completed.
2. Clean and demagnetize the head using a head eraser.
3. When measured, the level should be 0dBV = 1Vrms.
4. Use side A of the specified tape for adjustment.
   STD-331E : For adjustment of playback system.
   STD-631 : NORMAL blank tape
5. Prepare the following measuring devices :
   - AC millivoltmeter
   - Low-frequency oscillator
   - Attenuator
   - Oscilloscope
6. Adjust both L and R channels, unless specified otherwise.
7. Set the DOLBY NR switches to OFF, unless specified otherwise.
8. Warm up the unit for several minutes before adjustment. Especially before adjusting the frequency characteristics of recording and playback, warm up for 3 to 5 minutes in REC/PLAY mode.
9. Make sure to follow the proper order of the adjustment procedure. Any change in the order may cause an improper result.

■ **List of Adjustment**

Deck I
1. Head azimuth adjustment
2. Playback level adjustment

Deck II
1. Head azimuth adjustment
2. Playback level adjustment
3. Bias oscillation frequency adjustment
4. Recording level adjustment
5. Adjustment of frequency characteristics of recording/playback

**As the reference recording level is 250nwb/m for STD-331E, the recording level will be higher by 4 dB for STD-331B (160nwb/m). When adjusting, pay carefull attention to the type of tape used.*

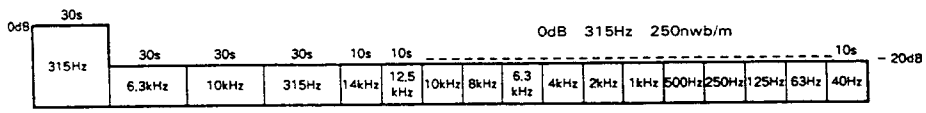

Fig. 6-1 Test Tape STD-331E

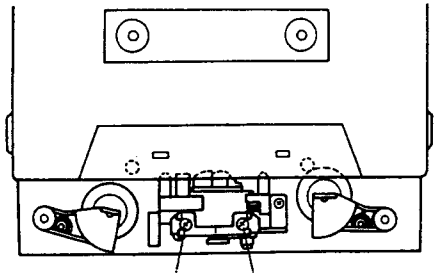

NOTE : Before adjusting, remove the deck panel.

Fig. 6-2 Head Azimuth Adjustment

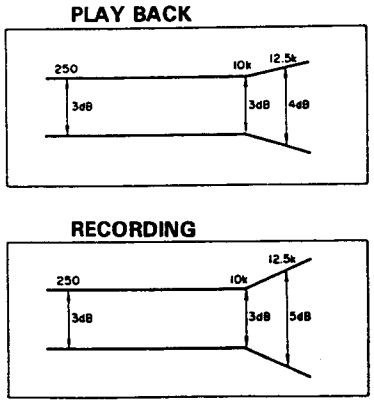

Fig. 6-3 Frequency Characteristics

■ Head Adjustment of Deck I

- Deck I is provided with an automatic tape selector mechanism.
- Note : Do not switch over FWD and REV while the screw driver is inserted.

1. Head Azimuth Adjustment

Procedure	Tape selector (Auto)	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331E (10kHz, -20dB).	Head azimuth adjustment screw (Fig. 6-2)	TAPE assembly JP-L (Lch) JP-R (Rch)	Maximum playback signal level.	Lock the screw with screw lock after completing adjustment.

2. Playback Level Adjustment

- Be sure to make a careful adjustment, as the adjustment determines the DOLBY NR level for playback.

Procedure	Tape selector (Auto)	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331E (315Hz, 0dB).	TAPE assembly VR4151 (Lch) VR4152 (Rch)	TAPE assembly JP-L (Lch) JP-R (Rch)	-6.3dBV	

XD-J115M, XD-J110

■ Head Adjustment of Deck II

- Deck II is provided with an automatic tape selector mechanism.
- Note : Do not switch over FWD and REV while the screw driver is inserted.

1. Head Azimuth Adjustment

Procedure	Tape selector (Auto)	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331E (10kHz, -20dB).	Head azimuth adjustment screw (Fig. 6-2)	TAPE assembly JP-L (Lch) JP-R (Rch)	Maximum playback signal level.	Lock the screw with screw lock after completing adjustment.

2. Playback Level Adjustment

- Be sure to make a careful adjustment, as the adjustment determines the DOLBY NR level for playback.

Procedure	Tape selector (Auto)	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331E (315Hz, 0dB).	TAPE assembly VR4121 (Lch) VR4122 (Rch)	TAPE assembly JP-L (Lch) JP-R (Rch)	-6.3dBV	

3. Bias Oscillation Frequency Adjustment

Procedure	Tape selector (Auto)	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	REC	Load the test tape STD-631 and set to record mode.	TAPE assembly T4351	Area between Ⓐ and Ⓑ (TAPE assembly) shown in Fig. 6-4.	The oscillation frequency is 105kHz ±5kHz.	

4. Recording Level Adjustment

Procedure	Tape selector (Auto)	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	REC	Apply a signal of 315Hz to the VCR input terminal and set the function to "VCR".	Input signal level	TAPE assembly JP-L (Lch) JP-R (Rch)	-10.3dBV	
2	NORM	REC/ PLAY	Record and playback the test tape STD-631 (315Hz).	TAPE assembly VR4451 (Lch) VR4452 (Rch)	TAPE assembly JP-L (Lch) JP-R (Rch)	Repeat the recording/playback, and make adjustment so that the playback level of 315Hz is -10.3dBV.	

5. Adjustment of Frequency Characteristics of Recording/playback

- As this procedure is for adjustment of the recording bias, be careful not to increase the distortion by underadjusting the bias.

Procedure	Tape selector (Auto)	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	REC	Apply a signal of 315Hz to the VCR input terminal and set the function to "VCR".	Input signal level	TAPE assembly JP-L (Lch) JP-R (Rch)	−30.3dBV	
2	NORM	REC/ PLAY	Record and playback the test tape STD-631 (315Hz and 10kHz).	TAPE assembly VR4351 (Lch) VR4352 (Rch)	TAPE assembly JP-L (Lch) JP-R (Rch)	Repeat the recording/playback, and make adjustment so that the playback level of 10kHz remains 0 ±0.5dB in relation to 315Hz.	

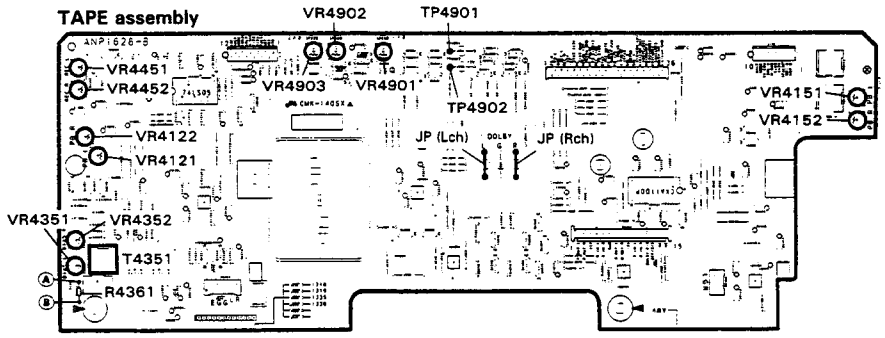

Fig. 6-4 Adjustment Points

6.2 CD BLOCK

6.2.1 Multi CD Unit (For XD-J115M)

If a disc player is adjusted incorrectly or inadequately, it may malfunction or not work at all even though there is nothing at all wrong with the pickup or the circuitry. Adjust correctly following the adjustment procedure.

● Adjustment Items/Verification Items and Order

If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in steps 1 − 4, the pickup block may be defective.

Step	Item	Test Point	Adjustment Location
1	Focus offset verification	TP1, Pin 6 (FCS. ERR)	None
2	Tracking error balance verification	TP1, Pin 2 (TRK. ERR)	None
3	Pickup radial/tangential direction tilt adjustment	TP1, Pin 1 (RF)	Radial tilt adjustment screw, Tangential tilt adjustment screw
4	RF level verification	TP1, Pin 1 (RF)	None
5	Focus servo loop gain adjustment	TP1, Pin 5 (FCS. IN) TP1, Pin 6 (FCS. ERR)	VR152 (FCS. GAN)
6	Tracking servo loop gain adjustment	TP1, Pin 3 (TRK. IN) TP1, Pin 2 (TRK. ERR)	VR151 (TRK. GAN)

● **Abbreviation table**

FCS. ERR :Focus Error
TRK. ERR :Tracking Error
FCS GAN :Focus Gain
TRK GAN :Tracking Gain
FCS. IN :Focus In
TRK. IN :Tracking In

● Measuring Instruments and Tools

1. Dual trace oscilloscope (10:1 probe)
2. Low-frequency oscillator
3. Test disc (YEDS-7)
4. Low pass filter (39kΩ +0.001 μF)
5. Resistor (100 kΩ)
6. Standard tools

● Test Point and Adjustment Variable Resistor Positions

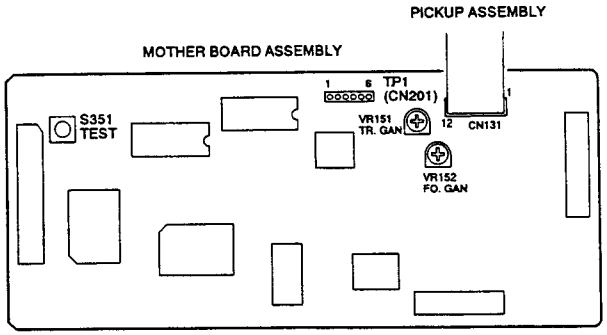

Figure 1. Adjustment Locations

● Notes

1. Use a 10:1 probe for the oscilloscope.
2. All the knob positions (settings) for the oscilloscope in the adjustment procedures are for when a 10:1 probe is used.

● Test Mode

These models have a test mode so that the adjustments and checks required for service can be carried out easily. When these models are in test mode, the keys on the front panel work differently from normal. Adjustments and checks can be carried out by operating these keys with the correct procedure. For these models, all adjustments are carried out in test mode.

[Setting these models to test mode]

How to set this model into test mode.
1. Turn off the power switch of DECK AMP.
2. Press the TEST mode switch (S351). (See Figure 1.)
3. Turn on the power switch of DECK AMP.

When the test mode is set correctly, the display is different from what it usually is when the power is turned on. If the display is still the same as usual, test mode has not been set correctly, so repeat Steps 1 – 3.

XD-J115M

[Release from test mode]

Here is the procedure for releasing the test mode:
1. Press the STOP key and stop all operations.
2. Turn off the power switch of DECK AMP.

[Operations of the keys in test mode]

Code	Key Name	Function In Test Mode	Explanation
	PGM (PROGRAM)	Focus servo close	The laser diode is lit up and the focus actuator is lifted up, then lowered slowly and the focus servo is closed at the point where the objective lens is focused on the disc. With the player in this state, if you lightly rotate the stopped disc by hand, you can hear the sound the focus servo. If you can hear this sound, the focus servo is operating correctly. If you press this key with no disc mounted, the laser diode lights up, the focus actuator is pulled up, then the actuator is lowered and raised three times and returned to its original position.
▶/II	PLAY/PAUSE	Spindle servo ON	Starts the spindle motor in the clockwise direction and when the disc rotation reaches the prescribed speed (about 500 rpm at the inner periphery), sets the spindle servo in a closed loop. Be careful. Pressing this key when there is no disc mounted makes the spindle motor run at the maximum speed. If the focus servo does not go correctly into a closed loop or the laser light shines on the mirror section at the outermost periphery of the disc, the same symptom is occurred.
▶/II	PLAY/PAUSE	Tracking servo close/open	Pressing this key when the focus servo and spindle servo are operating correctly in closed loops puts the tracking servo into a closed loop, displays the track number being played back and the elapsed time on the front panel, and outputs the playback signal. If the elapsed time is not displayed or not counted correctly or the audio is not played back correctly, it may be that the laser is shining on the section with no sound recorded at the outer edge of the disc, that something is out of adjustment, or that there is some other problem. This key is a toggle key and open/close the tracking servo alternately. This key has no effect if no disc is mounted.

Code	Key Name	Function in Test Mode	Explanation
⏮ · ◀◀	MANUAL / TRACK SEARCH REV	Carriage reverse (inwards)	Moves the pickup position toward the inner diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
▶▶ · ⏭	MANUAL / TRACK SEARCH FWD	Carriage forward (outwards)	Moves the pickup position toward the outer diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
■	STOP	Stop	Initializes and the disc rotation stops. The pickup and disc remain where they are when this key is pressed.
⏏	EJECT	CD magazine eject	Stores Disc 1 in the CD magazine, then ejects the CD magazine. However, even though the CD magazine is ejected, the pickup does not return to the park position. Even if the CD magazine is mounted again, the pickup remains where it is.

Note : When inserting the magazine, disc 1 of the magazine is loaded automatically.

[How to play back a disc in test mode]

In test mode, since the servos operate independently, playing back a disc requires that you operate the keys in the correct order to close the servos.
Here is the key operation sequence for playing back a disc in test mode.

PGM(PROGRAM) — Lights up the laser diode and closes the focus servo.
⇩
PLAY/PAUSE ▶/⏸ — Starts the spindle motor and closes the spindle servo.
⇩
PLAY/PAUSE ▶/⏸ — Closes the tracking servo.

Wait at least 2-3 seconds between each of these operations.

XD-J115M

1. Focus Offset Verification

● Objective	Verify the DC offset for the focus error amp.		
● Symptom when out of adjustment	The model does not focus in and the RF signal is dirty.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 6 (FCS. ERR) [Settings] 5 mV/division 10 ms/division DC mode	● Player state ● Adjustment location ● Disc	Test mode, stopped (just the Power switch on) None None needed

[Procedure]

Verify the DC voltage at TP1, Pin 6 (FCS. ERR) is 0 ± 50 mV.

Note : If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in adjustment items 1 – 4, the pickup block may be defective.

2. Tracking Error Balance Verification

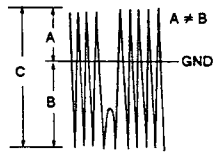
● Objective	To verify that there is no variation in the sensitivity of the tracking photo diode.		
● Symptom when out of adjustment	Play does not start or track search is impossible.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 2 (TRK. ERR). This connection may be via a low pass filter. [Settings] 50 mV/division 5 ms/division DC mode	● Player state ● Adjustment location ● Disc	Test mode, focus and spindle servos closed and tracking servo open None YEDS-7

[Procedure]

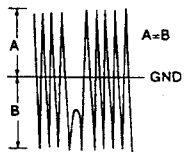
1. Move the pickup to midway across the disc (R=35 mm) with the MANUAL / TRACK SEARCH FWD ▶▶ · ⏭ or REV ⏮ · ◀◀ key.
2. Press the PGM (PROGRAM) key, then the PLAY/PAUSE ▶/⏸ key in that order to close the focus servo then the spindle servo.
3. Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
4. Supposing that the positive amplitude of the tracking error signal at TP1, pin 2 (TRK ERR) is (A) and the negative amplitude is (B), the following expression is satisfied.

When $A \geqq B$, $\frac{A-B}{C} \times \frac{1}{2} \leqq 0.1$

When $A < B$, $\frac{B-A}{C} \times \frac{1}{2} \leqq 0.1$



When there is a DC component



When there is no DC component

3. Pickup Radial/Tangential Tilt Adjustment

● Objective	To adjust the angle of the pickup relative to the disc so that the laser beams are shone straight down into the disc for the best read out of the RF signals.		
● Symptom when out of adjustment	Sound broken;some discs can be played but not others.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 1 (RF). [Settings] 20 mV/division 200 ns/division AC mode	● Player state ● Adjustment location ● Disc	Test mode, play Pickup radial tilt adjustment screw and tangential tilt adjustment screw YEDS-7

[Procedure]

1. Press the MANUAL / TRACK SEARCH FWD ▶▶ · ▶▶| or REV |◀◀ · ◀◀ key to move the pickup to halfway across the disc (R=35mm).
   Press the PGM (PROGRAM) key, the PLAY/PAUSE ▶/ ❚❚ key twice in that order to close the respective servos and put the player into play mode.
2. First, adjust the radial tilt adjustment screw with a Phillips screwdriver so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly.
3. Next, adjust the tangential tilt adjustment screw with a Phillips screwdriver so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly (Figure 3).
4. Adjust the radial tilt adjustment screw and the tangential tilt adjustment screw again so that the eye pattern can be seen the most clearly. As necessary, adjust the two screws alternately so that the eye pattern can be seen the most clearly.
5. When the adjustment is completed, lock the radial and tangential adjustment screw.
   Note:Radial and tangential mean the directions relative to the disc shown in Figure 2.

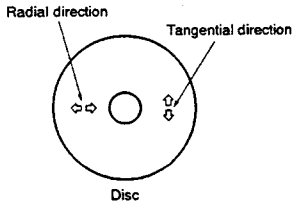


Figure 2

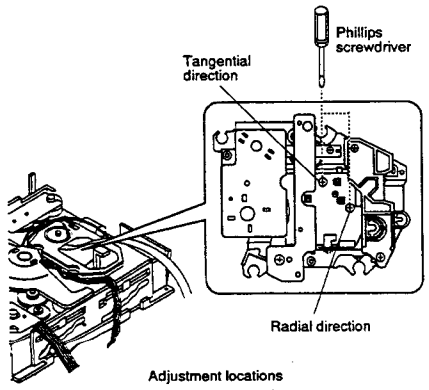

Adjustment locations

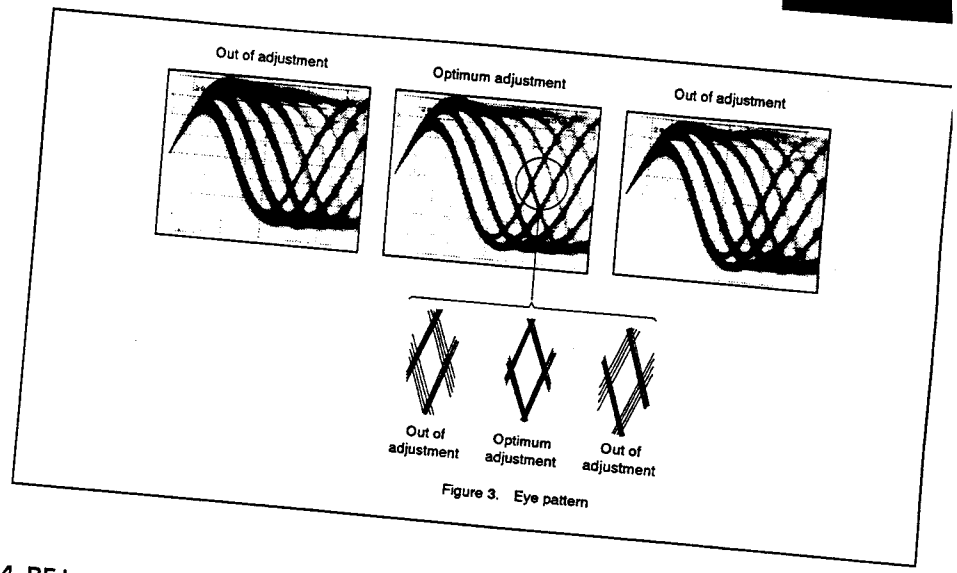

Figure 3. Eye pattern

4. RF Level Verification

● Objective	To verify the playback RF signal amplitude		
● Symptom when out of adjustment	No play or no search		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 1 (RF). [Settings] 50 mV/division 10 ms/division AC mode	● Player state ● Adjustment location ● Disc	Test mode, play None YEDS-7

[Procedure]

1. Move the pickup to midway across the disc (R=35 mm) with the MANUAL / TRACK SEARCH FWD ▶▶ · ▶▶| or REV |◀◀ · ◀◀ key, then press the PGM (PROGRAM) key, the PLAY/PAUSE ▶/ ❚❚ key twice in that order to close the respective servos and put the player into play mode.
2. Verify the RF signal amplitude is 1.2 Vp-p ± 0.2 V.

5. Focus Servo Loop Gain Adjustment

● Objective	To optimize the focus servo loop gain.		
● Symptom when out of adjustment	Playback does not start or focus actuator noisy.		
● Measurement instrument connections	See figure 4. [Settings] CH1 CH2 20 mV/division 5 mV/division X-Y mode	● Player state ● Adjustment location ● Disc	Test mode, play VR152 (FCS. GAN) YEDS-7

[Procedure]

1. Set the AF generator output to 1.2 kHz and 1 Vp-p.
2. Press the MANUAL / TRACK SEARCH FWD ▶▶ · ▶▶| or REV |◀◀ · ◀◀ key to move the pickup to halfway across the disc (R=35 mm), then press the PGM (PROGRAM) key, the PLAY/PAUSE ▶/ ❚❚ key twice in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR152 (FCS. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

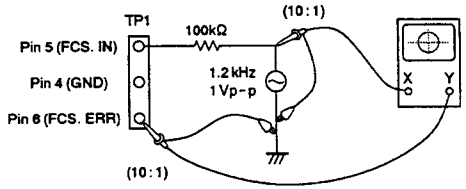

Figure 4

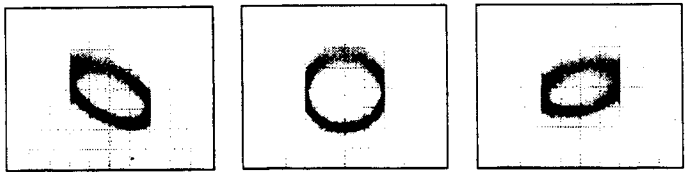
Focus Gain Adjustment



Higher gain | Optimum gain | Lower gain

6. Tracking Servo Loop Gain Adjustment

● Objective	To optimize the tracking servo loop gain.		
● Symptom when out of adjustment	Playback does not start, during searches the actuator is noisy, or tracks are skipped.		
● Measurement instrument connections	See Figure 5. [Settings] CH1 CH2 50 mV/division 20 mV/division X-Y mode	● Player state ● Adjustment location ● Disc	Test mode, play VR151 (TRK. GAN) YEDS-7

[Procedure]

1. Set the AF generator output to 1.2 kHz and 2 Vp-p.
2. Press the MANUAL / TRACK SEARCH FWD ▶▶ · ▶▶| or REV |◀◀ · ◀◀ key to move the pickup to halfway across the disc (R=35 mm), then press the PGM (PROGRAM) key, the PLAY/PAUSE ▶/ ❚❚ key twice in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR151 (TRK. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

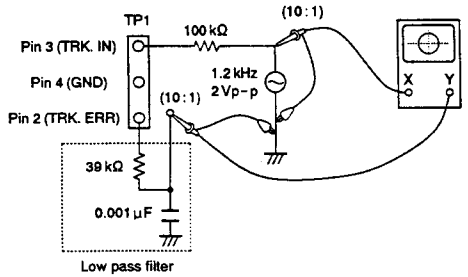


Figure 5

Tracking Gain Adjustment

Higher gain | Optimum gain | Lower gain

6.2.2 Single CD Unit (For XD−J110)

● Adjustment Methods

If a disc player is adjusted incorrectly or inadequately, it may malfunction or not work at all even though there is nothing at all wrong with the pickup or the circuitry. Adjust correctly following the adjustment procedure.

● Adjustment Items/Verification Items and Order

If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in steps 1 − 4, the pickup block may be defective.

Step	Item	Test Point	Adjustment Location
1	Focus offset verification	TP1, Pin 6 (FCS. ERR)	None
2	Tracking error balance verification	TP1, Pin 2 (TRK. ERR)	None
3	Pickup radial/tangential direction tilt adjustment	TP1, Pin 1 (RF)	Radial tilt adjustment screw, Tangential tilt adjustment screw
4	RF level verification	TP1, Pin 1 (RF)	None
5	Focus servo loop gain adjustment	TP1, Pin 5 (FCS. IN) TP1, Pin 6 (FCS. ERR)	VR152 (FCS. GAN)
6	Tracking servo loop gain adjustment	TP1, Pin 3 (TRK. IN) TP1, Pin 2 (TRK. ERR)	VR151 (TRK. GAN)

● **Abbreviation table**

FCS. ERR :Focus Error
TRK. ERR :Tracking Error
FCS GAN :Focus Gain
TRK GAN :Tracking Gain
FCS. IN :Focus In
TRK. IN :Tracking In

● Measuring Instruments and Tools

1. Dual trace oscilloscope (10:1 probe)
2. Low-frequency oscillator
3. Test disc (YEDS-7, 8cm disc)
4. Resistor (100 kΩ)
5. Standard tools

● Test Point and Adjustment Variable Resistor Positions

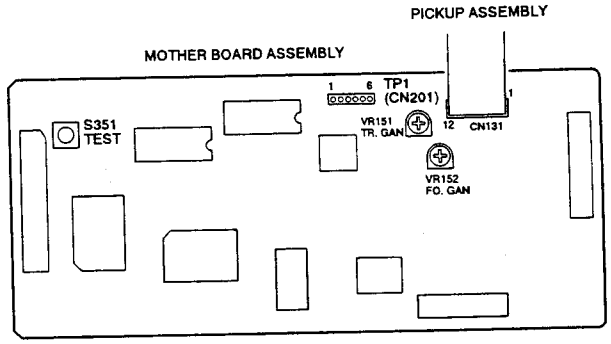

Figure 1. Adjustment Locations

● Notes

1. Use a 10:1 probe for the oscilloscope.
2. All the knob positions (settings) for the oscilloscope in the adjustment procedures are for when a 10:1 probe is used.

● Test Mode

These models have a test mode so that the adjustments and checks required for service can be carried out easily. When these models are in test mode, the keys on the front panel work differently from normal. Adjustments and checks can be carried out by operating these keys with the correct procedure. For these models, all adjustments are carried out in test mode.

[Setting these models to test mode]

How to set this model into test mode.

1. Turn off the power switch of DECK AMP.
2. Press the TEST mode switch (S351). (See Figure 1.)
3. Turn on the power switch of DECK AMP.

When the test mode is set correctly, the display is different from what it usually is when the power is turned on. If the display is still the same as usual, test mode has not been set correctly, so repeat Steps 1 − 3.

[Release from test mode]

Here is the procedure for releasing the test mode:

1. Press the STOP key and stop all operations.
2. Turn off the power switch of DECK AMP.

[Operations of the keys in test mode]

Code	Key Name	Function In Test Mode	Explanation
	PROGRAM	Focus servo close	The laser diode is lit up and the focus actuator is lifted up, then lowered slowly and the focus servo is closed at the point where the objective lens is focused on the disc. With the player in this state, if you lightly rotate the stopped disc by hand, you can hear the sound the focus servo. If you can hear this sound, the focus servo is operating correctly. If you press this key with no disc mounted, the laser diode lights up, the focus actuator is pulled up, then the actuator is lowered and raised three times and returned to its original position.
►/II	PLAY/PAUSE	Spindle servo ON	Starts the spindle motor in the clockwise direction and when the disc rotation reaches the prescribed speed (about 500 rpm at the inner periphery), sets the spindle servo in a closed loop. Be careful. Pressing this key when there is no disc mounted makes the spindle motor run at the maximum speed. If the focus servo does not go correctly into a closed loop or the laser light shines on the mirror section at the outermost periphery of the disc, the same symptom is occurred.
►/II	PLAY/PAUSE	Tracking servo close/open	Pressing this key when the focus servo and spindle servo are operating correctly in closed loops puts the tracking servo into a closed loop, displays the track number being played back and the elapsed time on the front panel, and outputs the playback signal. If the elapsed time is not displayed or not counted correctly or the audio is not played back correctly, it may be that the laser is shining on the section with no sound recorded at the outer edge of the disc, that something is out of adjustment, or that there is some other problem. This key is a toggle key and open/close the tracking servo alternately. This key has no effect if no disc is mounted.

Code	Key Name	Function In Test Mode	Explanation
⏮•◀◀	MANUAL/ TRACK SEARCH REV	Carriage reverse (inwards)	Moves the pickup position toward the inner diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
▶▶•⏭	MANUAL/ TRACK SEARCH FWD	Carriage forward (outwards)	Moves the pickup position toward the outer diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
■	STOP	Stop	Initializes and the disc rotation stops. The pickup and disc remain where they are when this key is pressed.
▲	OPEN/CLOSE	Disc tray open / close	Stores Disc 1 in the CD magazine, then ejects the CD magazine. However, even though the CD magazine is ejected, the pickup does not return to the park position. Even if the CD magazine is mounted again, the pickup remains where it is.

Note : When inserting the magazine, disc 1 of the magazine is loaded automatically.

[How to play back a disc in test mode]

In test mode, since the servos operate independently, playing back a disc requires that you operate the keys in the correct order to close the servos.
Here is the key operation sequence for playing back a disc in test mode.

PROGRAM	Lights up the laser diode and closes the focus servo.
⇩	
PLAY/PAUSE ▶/II	Starts the spindle motor and closes the spindle servo.
⇩	
PLAY/PAUSE ▶/II	Closes the tracking servo.

Wait at least 2-3 seconds between each of these operations.

1. Focus Offset Verification

● Objective	Verify the DC offset for the focus error amp.		
● Symptom when out of adjustment	The model does not focus in and the RF signal is dirty.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 6 (FCS. ERR) [Settings] 5 mV/division 10 ms/division DC mode	● Player state ● Adjustment location ● Disc	Test mode, stopped (just the Power switch on) None None needed

[Procedure]

Verify the DC voltage at TP1, Pin 6 (FCS. ERR) is 0 ± 50 mV.

Note : If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in adjustment items 1 – 4, the pickup block may be defective.

2. Tracking Error Balance Verification

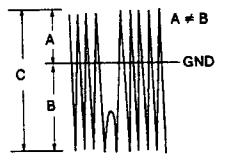
● Objective	To verify that there is no variation in the sensitivity of the tracking photo diode.		
● Symptom when out of adjustment	Play does not start or track search is impossible.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 2 (TRK. ERR). This connection may be via a low pass filter. [Settings] 50 mV/division 5 ms/division DC mode	● Player state ● Adjustment location ● Disc	Test mode, focus and spindle servos closed and tracking servo open None YEDS-7

[Procedure]

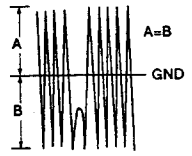
1. Move the pickup to midway across the disc (R=35 mm) with the MANUAL / TRACK SEARCH FWD ▶▶ · ▶▶| or REV |◀◀ · ◀◀ key.
2. Press the PGM (PROGRAM) key, then the PLAY/PAUSE ▶/ II key in that order to close the focus servo then the spindle servo.
3. Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
4. Supposing that the positive amplitude of the tracking error signal at TP1, pin 2 (TRK ERR) is (A) and the negative amplitude is (B), the following expression is satisfied.

When $A \geqq B$, $\frac{A-B}{C} \times \frac{1}{2} \leqq 0.1$

When $A < B$, $\frac{B-A}{C} \times \frac{1}{2} \leqq 0.1$



When there is a DC component



When there is no DC component

2. Tracking Error Balance Verification

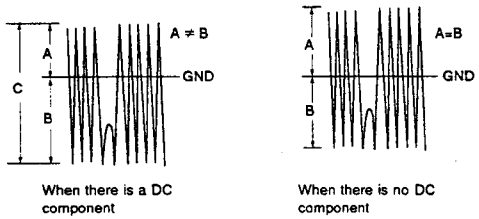
● Objective	To verify that there is no variation in the sensitivity of the tracking photo diode.		
● Symptom when out of adjustment	Play does not start or track search is impossible.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 2 (TRK. ERR). This connection may be via a low pass filter. [Settings] 50 mV/division 5 ms/division DC mode	● Player state ● Adjustment location ● Disc	Test mode, focus and spindle servos closed and tracking servo open None YEDS-7

[Procedure]

1. Move the pickup to midway across the disc (R=35 mm) with the MANUAL / TRACK SEARCH FWD ▶▶ • ▶▶| or |◀◀ • ◀◀ key.
2. Press the PROGRAM key, then the PLAY/PAUSE ▶/❚❚ key in that order to close the focus servo then the spindle servo.
3. Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
4. Supposing that the positive amplitude of the tracking error signal at TP1, pin 2 (TRK ERR) is (A) and the negative amplitude is (B), the following expression is satisfied.

$$\text{When } A \geqq B,\ \frac{A-B}{C} \times \frac{1}{2} \leqq 0.1$$

$$\text{When } A < B,\ \frac{B-A}{C} \times \frac{1}{2} \leqq 0.1$$



When there is a DC component

When there is no DC component

3. Pickup Radial/Tangential Tilt Adjustment

● Objective	To adjust the angle of the pickup relative to the disc so that the laser beams are shone straight down into the disc for the best read out of the RF signals.		
● Symptom when out of adjustment	Sound broken;some discs can be played but not others.		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 1 (RF). [Settings] 20 mV/division 200 ns/division AC mode	● Player state ● Adjustment location ● Disc	Test mode, play Pickup radial tilt adjustment screw and tangential tilt adjustment screw 8 cm disc (However, those with approx. 20 min of audio signal (music).)

[Procedure]

1. Press the MANUAL / TRACK SEARCH FWD ▶▶ • ▶▶| or |◀◀ • ◀◀ key to move the pickup to the external circumference of the disc.
   Press the PROGRAM key, the PLAY/PAUSE ▶/❚❚ key, then the PLAY/PAUSE ▶/❚❚ key in that order to close the respective servos and put the player into play mode.
2. First, adjust the radial tilt adjustment screw with a hexagonal wrench so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly.
3. Next, adjust the tangential tilt adjustment screw with a ball-point type hexagonal wrench so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly (Figure 3).
   ※ The ball-point type hexagonal wrench is used because the disc will get in the way if a normal hexagonal wrench is used.
4. Adjust the radial tilt adjustment screw and the tangential tilt adjustment screw again so that the eye pattern can be seen the most clearly. As necessary, adjust the two screws alternately so that the eye pattern can be seen the most clearly.
5. When the adjustment is completed, lock the radial and tangential adjustment screw.

Note:Radial and tangential mean the directions relati

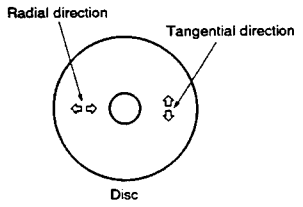


Figure 2

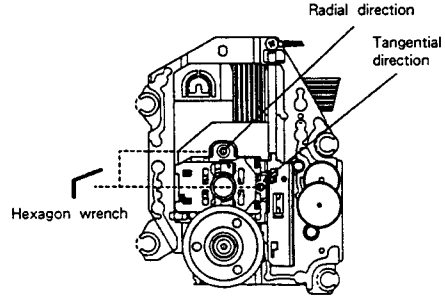

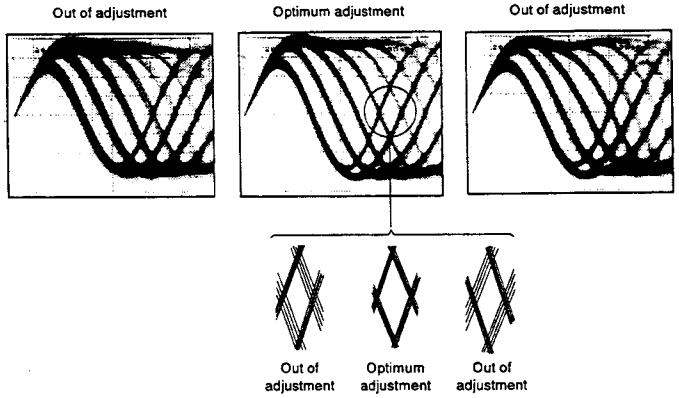

Figure 3 Eye pattern

4. RF Level Verification

● Objective	To verify the playback RF signal amplitude		
● Symptom when out of adjustment	No play or no search		
● Measurement instrument connections	Connect the oscilloscope to TP1, Pin 1 (RF). [Settings] 50 mV/division 10 ms/division AC mode	● Player state ● Adjustment location ● Disc	Test mode, play None YEDS-7

[Procedure]

1. Move the pickup to midway across the disc (R=35 mm) with the MANUAL/TRACK SEARCH FWD ▶▶ • ▶▶| or |◀◀ • ◀◀ key, then press the PROGRAM key, the PLAY/PAUSE ▶/❚❚ key, then the PLAY/PAUSE ▶/❚❚ key in that order to close the respective servos and put the player into play mode.
2. Verify the RF signal amplitude is 1.2 Vp-p ± 0.2 V.

5. Focus Servo Loop Gain Adjustment

● Objective	To optimize the focus servo loop gain.		
● Symptom when out of adjustment	Playback does not start or focus actuator noisy.		
● Measurement instrument connections	See figure 4. [Settings] CH1 CH2 20 mV/division 5 mV/division X-Y mode	● Player state ● Adjustment location ● Disc	Test mode, play VR152 (FCS. GAN) YEDS-7

[Procedure]

1. Set the AF generator output to 1.2 kHz and 1 Vp-p.
2. Press the MANUAL/TRACK SEARCH FWD ▶▶ • ▶▶| or |◀◀ • ◀◀ key to move the pickup to halfway across the disc (R=35 mm), then press the PROGRAM key, the PLAY/PAUSE ▶/❚❚ key, then the PLAY/PAUSE ▶/❚❚ key in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR152 (FCS. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

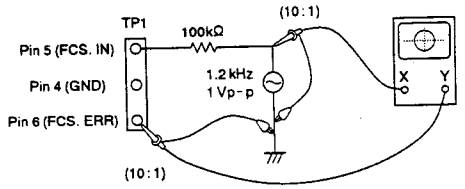

Figure 4

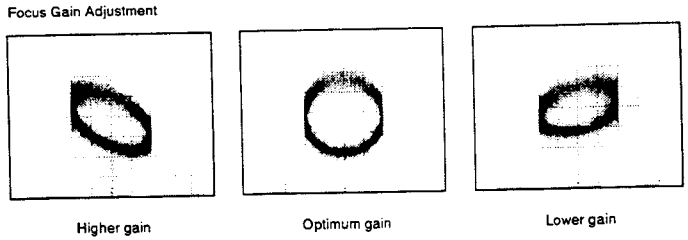

6. Tracking Servo Loop Gain Adjustment

● Objective	To optimize the tracking servo loop gain.		
● Symptom when out of adjustment	Playback does not start, during searches the actuator is noisy, or tracks are skipped.		
● Measurement instrument connections	See Figure 5. [Settings] CH1 CH2 50 mV/division 20 mV/division X-Y mode	● Player state ● Adjustment location ● Disc	Test mode, play VR151 (TRK. GAN) YEDS-7

[Procedure]

1. Set the AF generator output to 1.2 kHz and 2 Vp-p.
2. Press the MANUAL/TRACK SEARCH FWD ▶▶ • ▶▶| or |◀◀ • ◀◀ key to move the pickup to halfway across the disc (R=35 mm), then press the PROGRAM key, the PLAY/PAUSE ▶/❚❚ key, then the PLAY/PAUSE ▶/❚❚ key in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR151 (TRK. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

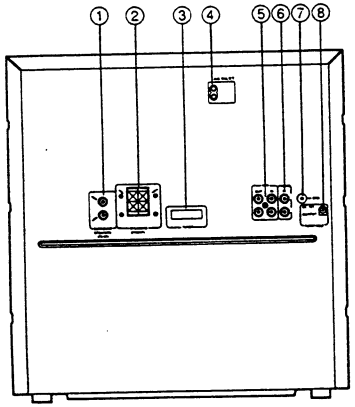
8. PANEL FACILITIES

REAR PANEL FACILITIES

XD-J115M/XD-J110



Multi-CD cassette deck amplifier: XD-J115M
CD cassette deck amplifier: XD-J110

① SURROUND SPEAKERS jacks

Connect the surround speaker systems.

NOTE:
Connect a speaker system having a nominal impedance of 16 Ω or more.

② SPEAKERS terminals

L: Connect the left speaker system as seen from the listening position.
R: Connect the right speaker system as seen from the listening position.

NOTE:
Connect a speaker system having a nominal impedance ranging from 8 Ω to 16 Ω.

③ TUNER jacks

Connect the tuner flat cable here.

④ AC INLET jack

Connect the power cord here.

⑤ VCR IN/OUT jacks

IN : Connect to audio output jacks of VCR.
OUT : Connect to audio input jacks of VCR.

⑥ PHONO input jacks

Connect the audio cord of the turntable to these jacks.

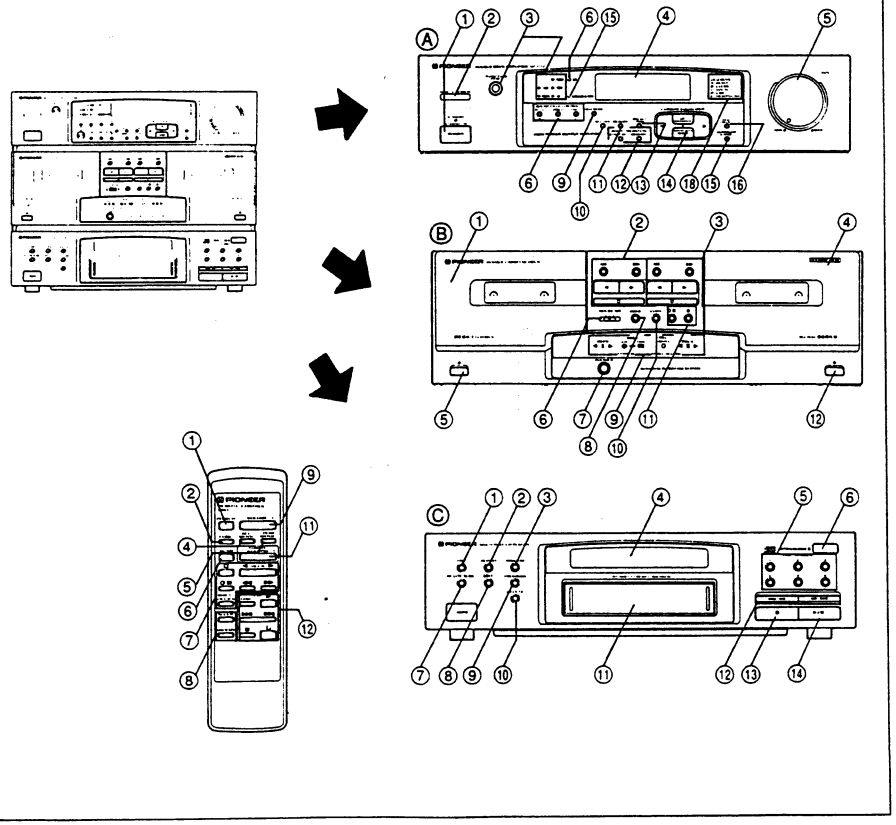
⑦ Ground terminal (GND)

Connect this to the ground terminal on the turntable (except for PL-J210)

⑧ TURNTABLE (DC 12V OUTPUT) jack

This jack supplies power to the turntable PL-J210.
Connect the power supply cord of the turntable to this jack.

[XD-J115M]



FRONT PANEL FACILITIES

Multi-CD cassette deck amplifier: XD-J115M

- This unit has an automatic tape type selector.
- Tapes can be played back on deck I; tapes can be played back and recorded on deck II.
- Sound can be recorded as adjusted by the graphic equalizer (excluding synchro copy).
- Use a TYPE I (normal) or TYPE II (High/CrO_2) tape.

Ⓐ : Amplifier section

① POWER STANDBY/ON switch, STANDBY indicator

This is the switch for electric power.

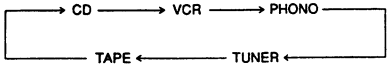
ON : When set to the ON position, power is supplied and the unit becomes operational.

STANDBY : When set to the STANDBY position, the main power flow is cut and the unit is no longer fully operational. A minute flow of power feeds the unit to maintain operation readiness.
The unit is in STANDBY when only the STANDBY indicator above the POWER switch is lit.

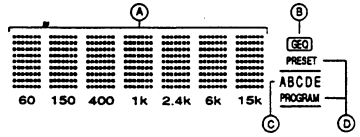
② REMOTE SENSOR window

③ FUNCTION (DEMO) button and indicators

Used to select the desired source. Each time this button is pressed, the source switches as follows. The desired indicator lights.



④ Display section



Ⓐ Visual display of spectrum analyzer and graphic equalizer.
Ⓑ This lights when the GEQ ON/OFF button is on.
Ⓒ Display of the memory being recalled with the GEQ MODE button (A, B, C, D or E lights) or SOUND FIELD CONTROL button (A, B or C lights).
Ⓓ These under lines indicate the memory (PRESET or PROGRAM) that can be recalled with the PRESET/PGM or GEQ MODE button.

⑤ VOL. (Volume) control

⑥ SOUND FIELD CONTROL buttons and indicators

Used for calling the preset memory (MOVIE, DISCO, HALL) of the sound field control and for setting your own original memory (PROGRAM A, B, C). The SFC will light when MOVIE, DISCO, or HALL is called.

⑨ GEQ MODE button

Use to recall preset equalization settings. Also use to program into memory and recall desired sound field settings.

⑩ SFC OFF button

Press to reset the sound field control to no effect.
Turns off SURROUND & WIDE and adjusts GEQ to FLAT.

⑪ MEMORY button

Use to memorize your desired sound field control setting.

⑫ SMART OPERATION buttons

[START/SET]
Use when programming memory and operating SMART OPERATION.
[MEMORY]
Use when programming SMART OPERATION into memory.

⑬ PRESET/PGM button

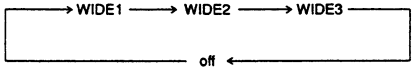
Use to switch between recall of PRESET memory settings and your own original memory settings (PROGRAM) with the GEQ MODE button or SOUND FIELD CONTROL buttons. The memory being recalled is indicated by the indicator in the display section.

⑭ CUSOR EQUALIZER buttons

Use to adjust graphic equalizer settings.
[◄ , ►] : Use these to change the frequency range to be adjusted.
[UP, DOWN] : Use these to adjust the degree of equalization.

⑮ SURROUND & WIDE button and indicator

By turning this switch ON, you can enjoy surround reproduction when surround speakers are used.
By turning this button ON, you can enjoy WIDE reproduction with greater left-right spread when surround speakers are not used.
Each time this button is pressed, WIDE effects switches as follows.



The WIDE effects of the sound intensify in the order of WIDE 1→2→3.
The SURROUND & WIDE indicator will light.

NOTE:
In the case of monaural source, SURROUND & WIDE effects cannot be obtained.

⑯ GEQ ON/OFF button

This switches the graphic equalizer on/off. When it's on, the GEQ indicator in the display section lights.

⑱ GEQ MODE printed indicators

Displays of the preset equalization pattern name being recalled with the GEQ MODE button.

Ⓑ : Cassette deck section

① Deck I cassette door

② Deck I operation buttons

► (PLAY: FWD) : For playing back a tape in the forward mode.
◄ (PLAY: REV) : For playing back a tape in the reverse mode.
■ (STOP) : For stopping the tape.
►► (FAST) : Fast forward in forward mode, rewind in reverse mode. Music Search can also be carried out.
◄◄ (FAST) : Rewind in forward mode, fast forward in reverse mode. Music Search can also be carried out.

③ Deck II operations buttons

Same as Deck I operation buttons ②.

④ Deck II cassette door

⑤ Deck I EJECT button (▲)

⑥ DOLBY* NR switch

Only the Dolby B-type NR for XD-J115M.

•

Manufactured under license from Dolby Laboratories Licensing Corporation.
DOLBY and the double - D symbol ⧈ are trademarks of Dolby Laboratories Licensing Corporation.

⑦ PHONES (Head phones) jack

For stereo headphones.

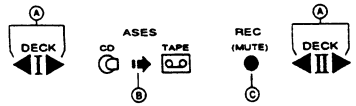
NOTE:
There is no output from the speakers when headphones are plugged into the PHONES jack.

⑧ ASES button

Used for recording a CD on a cassette tape automatically.

NOTE:
- *FINE is the mode when performing CD player EDIT (Computer Allocated Program Editing).*
- *The NORMAL mode provide a blank space of about five seconds between songs.*

⑨ Operation indicators



Ⓐ **Direction (◄, ►):** Indicates direction of tape travel during recording or playback.
Ⓑ **ASES:** Lights when in the ASES mode.
Ⓒ **REC (MUTE):** Lights when in REC or REC mute.

⑩ COPY button

Used for tape copying.
Copying from the deck I tape to the deck II tape at normal recording/playback speed.

⑪ Deck II control buttons

● II (REC PAUSE) : Pressing this button sets recording standby mode. Pressing the play button (◄ or ►) next starts recording. Pressing this button during recording sets Rec pause mode.
Temporarily stops tape travel. Cancels pause mode when pressed again or press the play button.

O (MUTE) : Used for creating a blank space between songs. Pressing this button once creates an unrecorded 4-second space.
Continuing to press the button creates an unrecorded space as long as the time the button is pressed.

⑫ Deck II EJECT button (▲)

Ⓒ : CD player section

① TIME button

Use to select the method for displaying the playing time on the display section.
Each time the button is pressed, the indication changes from TIME, REMAIN (track remain) and REMAIN (disc remain): This will not be displayed during programmed playback to TOTAL in that order.

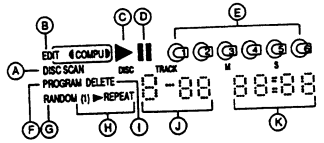
② REPEAT button

Press this button for repeat playback. Pressing the button once, twice or three times will change the repeat mode from single track repeat, to all tracks repeat, and repeat playback cancellation respectirely.

③ RANDOM

Press to begin random playback.

④ Display section



Ⓐ **DISC SCAN** : Lights after pressing the HI-LITE SCAN button.
Ⓑ **EDIT COMPU** : Normally EDIT COMPU is light. When the EDIT button is pressed, ◖ ◗ mark lights up.
Ⓒ ► : Lights during playback.
Ⓓ II : Lights during temporarily interrupted playback.
Ⓔ **C**<DISC symbol> : If a nonexistent disc is searched for, the corresponding disc symbol goes off.
Ⓕ **PROGRAM** : Lights after programming (after program has been memorized).
Ⓖ **RANDOM** : Lights during random playback.
Ⓗ **(1) ►REPEAT** : Lights during repeat playback of one tune. (1) extinguishes during repeat playback of all tunes.
Ⓘ **DELETE** : Lights during delete.
Ⓙ DISC 8 TRACK 88 : Indicates the disc and the track currently being heard.
Ⓚ 88:88 : Displays the minutes and seconds of the elapsed time, total palyback time, and remaining time.

NOTE:
When power is tuned on, the CD player section indicators show different indications depending on the condition (disc loaded or not, etc.) prior to when the power was turned off. This is not a malfunction.

⑤ DISC NUMBER buttons (1—6)

Use to select disc numbers for playback or programming.

⑥ EJECT button (▲)

Press to eject a magazine. When pressed, any magazine inside is expelled forward.

⑦ HI-LITE SCAN button

If this button is pressed while the unit is stopped, the first 10 seconds after the first minute of the first tune on each of the discs from DISC 1 to DISC 6 are played back in sequence (DISC SCAN). If this button is pressed during DISC SCAN, the first ten seconds after the first minute of all the tunes on each of discs from DISC 1 to DISC 6 are played back (TRACK SCAN).
To reset the start-up time of HI-LITE SCAN, press the HI-LITE SCAN button during normal playback.
Enter the time of current playback in memory and 10-second passages on all the remaining tracks are played back at the memorized time.

⑧ EDIT button

Press this button and designate the number of minutes of tape for recording with the Manual/Track search button. The CD player then selects tunes and programs them automatically for recording so that the unrecorded portion at the end of the tape is at the shortest distance.

⑨ PROGRAM button

Use to program a sequence of tracks.
- When this button is pressed, the "PROGRAM" indicator will light. Select a desired disc and track with DISC NUMBER buttons and Manual/Track search buttons. Tunes will be added to the order in which they are specified.
- If only a DISC NUMBER button is pressed, all tracks on the specified disc will be added to the program. The letters "AL" will appear on the indicator.

⑩ DELETE button

Pressing this button and then selecting the discs with the DISC NUMBER buttons (1 through 6) of selecting the tracks with the Manual/Track search buttons will result in the selected discs and tracks not being played even when the PLAY/PAUSE button is pressed.

⑪ Magazine insertion slot

⑫ Manual/Track search buttons (⏮ · ◄◄ , ►► · ⏭)

These buttons are used for track search and manual search during normal playback, programmed playback or pause. When these buttons are pressed, either the previous tune or the next tune is established. If they are kept depressed, either fast forward or reverse is established, depending upon the direction of pressing.

⑬ STOP button (■)

Press to stop playback. When pressed, the player goes into the stop mode and all operations stop.
[LAST DISC MEMORY]
If no program had been input when the STOP button (■) is pressed to stop the disc, the number of the disc that was just played will be displayed. (the song number is "01").
When the STOP button (■) is pressed another time, the DISC NUMBER displayed will change to "1".
If a program had been input, the disc will be stopped with the DISC NUMBER of the first step and song number displayed.

⑭ PLAY/PAUSE button (►/II)

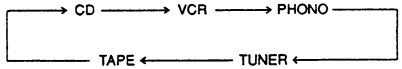
During stop, press this button to start playback. During playback, press this button to pause.
When this button is pressed during highlight scanning, the highlight scan will be released, and the disc will be played normally.

Remote control unit

① POWER button

② FUNCTION button

The amplifier function automatically switches to the music source being operated when you press the CD playback (►) cassette deck playback (◄, ►) or tuner station controls.
Use to switch the input.
Each time this button is pressed, it is switches as follows:



The desired indicator lights.

④ SFC MODE button

Use to select one of the preset sound fields. Each time the button is pressed, one of the preset sound fields will be selected, in the following order:

Turn off SURROUND & WIDE and adjusts GEQ to FLAT.

⑤ PGM MODE button

This button is used when selecting one of your own personally created sound fields. Each time the button is pressed, one of the sound fields will be selected, in the following order:

Turn off SURROUND & WIDE and adjusts GEQ to FLAT.

⑥ SCAN button

Press to perform automatic scan of the broadcast stations preset in the unit's memory.

⑦ Deck operation buttons.

◄, ► : Begins playback
◄◄, ►► : Fast forward or rewind
■ : Stop
● II : Pressing this button sets recording standby mode. Pressing the play button (◄ or ►) next starts recording. Pressing this button during recording sets REC PAUSE mode. Temporarily stops tape travel. Cancels pause mode press the play button.
SHIFT TAPE I : To operate deck I, press the desired deck operation while pressing this button.

⑧ Timer operation buttons

SLEEP : Sets the sleep timer.
SNOOZE : Turns off power if pressed after timer playback begins. Timer playback begins again approx. 5 minutes later.
WAKE-UP : Timer playback setting/cancellation can be performed when the timer playback time has been set.

⑨ VOLUME + (UP)/– (DOWN) buttons

When pressed, VOLUME on the amplifier is actually moved by a motor.

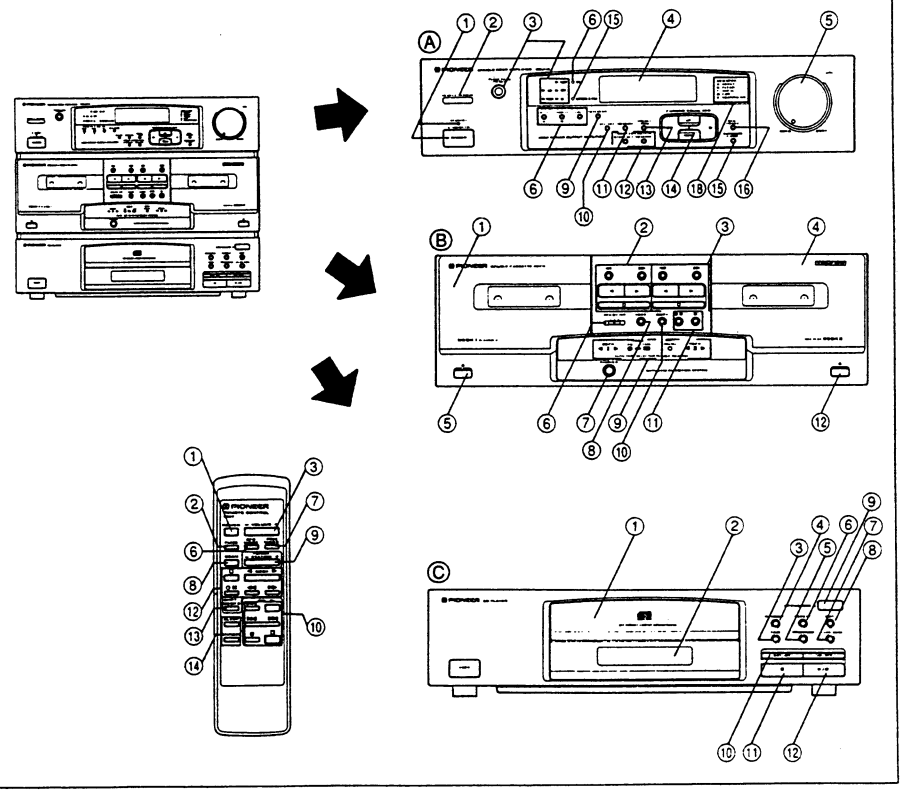
⑪ TUNER STATION – (DOWN), + (UP) buttons

Used for locating stations. (see page 20)
– (DOWN) : Stations change in order in the downward direction.
+ (UP) : Stations change in order in the upward direction.

⑫ CD operation buttons

► : Play
DISC : DISC selection
■ : Stop
II : Pause (To release, press PAUSE button once more, press PLAY button, or press the PLAY/PAUSE button of the main unit.)
⏮, ⏭ : Track search

XD-J110



FRONT PANEL FACILITIES

CD cassette deck amplifier: XD-J110

- This unit has an automatic tape type selector.
- Tapes can be played back on deck I; tapes can be played back and recorded on deck II.
- Sound can be recorded as adjusted by the graphic equalizer (excluding synchro copy).
- Use a TYPE I (normal) or TYPE II (High/CrO_2) tape.

Ⓐ : Amplifier section

① POWER STANDBY/ON switch/STANDBY indicator

This is the switch for electric power.

ON : When set to the ON position, power is supplied and the unit becomes operational.

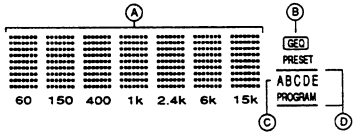
STANDBY : When set to the STANDBY position, the main power flow is cut and the unit is no longer fully operational. A minute flow of power feeds the unit to maintain operation readiness.
The unit is in STANDBY when only the STANDBY indicator above the POWER switch is lit.

② REMOTE SENSOR window

③ FUNCTION (DEMO) button and indicators

Used to select the desired source. Each time this button is pressed, the source switches as follows. The desired indicator lights.

④ Display section



Ⓐ Visual display of spectrum analyzer and graphic equalizer.
Ⓑ This lights when the GEQ ON/OFF button is on.
Ⓒ Display of the memory being recalled with the GEQ MODE button (A, B, C, D or E lights) or SOUND FIELD CONTROL button (A, B or C lights).
Ⓓ These under lines indicate the memory (PRESET or PROGRAM) that can be recalled with the PRESET/PGM or GEQ MODE button.

⑤ VOL. (Volume) control

⑥ SOUND FIELD CONTROL buttons and indicator (MOVIE/A, DISCO/B, HALL/C)

Used when calling the preset memory (MOVIE, DISCO, HALL) of sound field control and setting your own original memory (PROGRAM-A, B, C).
The SFC and SURROUND & WIDE indicators will light when MOVIE, DISCO, or HALL is called.

⑨ GEQ MODE button

Use to recall preset equalization settings. Also use to program into memory desired sound field settings.

⑩ SFC OFF button

Press to reset the sound field control to no effect.
Turns off SURROUND & WIDE and adjusts GEQ to FLAT.

⑪ MEMORY button

Use to memorize your desired sound field control setting.

⑫ SMART OPERATION buttons

[START/SET]
Use when programming memory and operating SMART OPERATION.
[MEMORY]
Use when programming SMART OPERATION into memory.

⑬ PRESET/PGM (PROGRAM) button

Use to switch between recall of PRESET memory settings and your own original memory settings (PROGRAM) with the GEQ MODE button or SOUND FIELD CONTROL buttons. The memory being recalled is indicated by the indicator in the display section.

⑭ CUSOR EQUALIZER buttons

Use to adjust graphic equalizer settings.
[◄, ►] : Use these to change the frequency range to be adjusted.
[UP, DOWN] : Use these to adjust the degree of equalization.

⑮ SURROUND & WIDE button and indicator

By turning this switch ON, you can enjoy surround reproduction when surround speakers are used.
By turning this button ON, you can enjoy WIDE reproduction with greater left-right spread when surround speakers are not used.
Each time this button is pressed, WIDE effects switches as follows.

The WIDE effects of the sound intensify in the order of WIDE 1→2→3.
The SURROUND & WIDE indicator will light.

NOTE:
In the case of monaural source, SURROUND & WIDE effects cannot be obtained.

⑯ GEQ ON/OFF button

This switches the graphic equalizer ON/OFF. When it's ON the GEQ indicator in the display section lights.

NOTE:
Sound comes from the surround speakers regardless of whether this button is on or off.

⑱ GEQ MODE printed indecations

Displays of the preset equalization pattern name being recalled with the GEQ MODE button.

XD-J110

Ⓑ : Cassette Deck Section

① Deck I cassette door

② Deck I operation buttons

► (PLAY: FWD) : For playing back a tape in the forward mode.
◄ (PLAY: REV) : For playing back a tape in the reverse mode.
■ (STOP) : For stopping the tape.
►► (FAST) : Fast forward in forward mode, rewind in reverse mode. Music Search can also be carried out.
◄◄ (FAST) : Rewind in forward mode, fast forward in reverse mode. Music Search can also be carried out.

③ Deck II operations buttons

Same as Deck I operation buttons ②.

④ Deck II cassette door

⑤ Deck I EJECT button (⏏)

⑥ DOLBY* NR switch

Only the Dolby B-type NR for XD-J110.

*
- *Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.*
- *"DOLBY" and the double-D symbol ⊡⊡ are trademarks of Dolby Laboratories Licensing Corporation.*

⑦ PHONES (Headphones) jack

For stereo headphones.

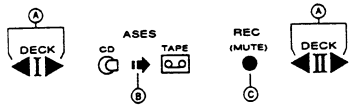
NOTE:
There is no output from the speakers when headphones are plugged into the PHONES jack.

⑧ ASES button

Used for recording a CD on a cassette tape automatically.

NOTE:
- *FINE is the mode when performing CD player EDIT (Computer Allocated Program Editing).*
- *The NORMAL mode provides a blank space of about five seconds between songs.*

⑨ Operation indicators



Ⓐ Direction (◄, ►):
Indicates direction of tape travel during recording or playback.
Flashes slowly in Pause mode.
Flashes rapidly during Music Search (MS).

Ⓑ ASES:
Lights when in the ASES mode.

Ⓒ REC (MUTE):
Lights when it flashes during tape copying.

⑩ COPY button

Used for tape copying.
Copying from the deck I tape to the deck II tape at normal recording/playback speed.

⑪ Deck II CONTROL buttons

● II (REC PAUSE) : Pressing this button sets recording standby mode. Pressing the PLAY button (◄ or ►) next starts recording. Pressing this button during recording sets REC PAUSE mode.
Temporarily stops tape travel. Cancels pause mode when pressed again or press the PLAY button.

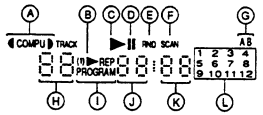
O (MUTE) : Used for creating a blank space between songs. Pressing this button once creates an unrecorded 4-second space.
Continuing to press the button creates an unrecorded space as long as the time the button is pressed.

⑫ Deck II EJECT button (⏏)

Ⓒ : CD player section

① Disc tray

② Display section



Ⓐ ◖◗ : Display when Compu PGM editing is set or used.
Ⓑ (1) ► REP : Lights during repeat playback of single track or all tracks.
Ⓒ ► : Lights during playback.
Ⓓ II : Lights during temporarily interrupted playback.
Ⓔ RND : Lights during random playback.
Ⓕ SCAN : Lights during HI-LITE scan playback.
Ⓖ A/B (music calendar) : TAPE SIDE A/TAPE SIDE B
After editing, the track numbers that can be recorded on the A (B) side of the tape will light.
Ⓗ TRACK (figure) : Displays the current track number (during normal playback and programmed playback) or the track being programmed (during programmed operation).
① PROGRAM : Lights after programming (after program has been memorized).
Ⓙ Minutes (figure) : Displays the minutes of the elapsed time, total playback time, and remaining time.
Ⓚ Seconds (figure) : Displays the seconds of the elapsed time, total playback time, and remaining time.
Ⓛ 1–12 (music calendar) : Displays the track numbers.

NOTE:
- *When power is turned ON, the CD player section indicators show different indications depending on the condition (disc loaded or not, etc.) prior to when the power was turned off. This is not a malfunction.*

③ TIME button

This button selects the display mode. Each time the button is pressed, the display changes from Time, Remain, to Total in that order.

- **Time** : Displays the track number of the track being played (TRACK) and the elapsed time (minutes and seconds).
- **Remain** : Displays the remaining time on the track being played. When the TIME button is pressed again, the remaining time on the disc being played will be displayed.
- **Total** : Displays the total number of tracks on the disc (TRACK) and the total playback time will be displayed. During playback, the display goes on for about 5 seconds before changing to the time display.

④ RANDOM Play button

Press to begin random playback.

⑤ PROGRAM button

Use to program a sequence of tracks.
- Press this button after selecting a desired track with track search button. Tunes will be added to the program in the order in which they are specified.

⑥ REPEAT button

Press this button for repeat playback. Pressing the button once, twice, or three times will change the repeat mode from single track repeat, all tracks repeat, to repeat playback cancellation, respectively.

⑦ HI-LITE SCAN button

10 second passages are played starting from the first minute of each track on the CD, in sequence, beginning with the first track.
To set the point in the tracks you want to scan, press this button during playback. The elapsed time is memorized, and then ten second passages of all the remaining tracks are played at the memorized time.

⑧ EDIT button

Press this button, and with the Manual/Track search buttons (⏮ • ◄◄, ►► • ⏭) specify the length of tape you want to use for recording. Before recording, the CD player automatically programs the order of tracks to minimize the amount of unused tape at the end of a selected tape length.

⑨ OPEN/CLOSE button

Press when you wish to eject a disc. Each time the button is pressed, the tray is alternately pushed out or pulled in.

⑩ MANUAL/TRACK SEARCH buttons (⏮ • ◄◄, ►► • ⏭)

Use these buttons to perform track search and manual search during regular playback, programmed playback, or during pause.
Press a button to skip to the previous or the next track. You will continue moving to the next track in the direction of the button you pressed as long as you continue pressing the button.
Keep the button depressed until you come to the part you want to listen to.

⑪ STOP button (■)

Press to stop playback. When pressed, the player goes into stop mode and all operations stop.
Press to clear a program. When pressed during stop mode, the program stored in memory is cleared.

⑫ PLAY/PAUSE button (► / II)

Press to begin playback.
When playing back, press to temporarily interrupt playback. When pressed again, the pause mode is canceled and playback resumes.

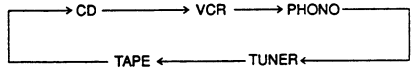
XD-J110

Remote control unit

① POWER button

② FUNCTION button

The amplifier function automatically switches to the music source being operated when you press the CD playback (►) cassette deck playback (◄, ►), or tuner station controls.
Used to switch the input. Each time this button is pressed, it switches as follows.



The desired indicator lights.

③ VOLUME + (UP)/– (DOWN) buttons

When pressed, VOLUME on the amplifier is actually moved by a motor.

⑥ SFC MODE button

Use to select one of the preset sound fields. Each time the button is pressed, one of the preset sound fields will be selected, in the following order:

* Turn off SURROUND & WIDE and adjusts GEQ to FLAT.

⑦ PGM (PROGRAM) MODE button

This button is used when selecting one of your own personally created sound fields. Each time the button is pressed, one of the sound fields will be selected, in the following order:

* Turn off SURROUND & WIDE and adjusts GEQ to FLAT.

⑧ SCAN button

Use to select the display mode (frequency mode or station mode).

⑨ TUNER STATION – (DOWN), + (up) buttons

- Used for locating stations.

+: Stations change in order in the upward direction.
–: Stations change in order in the downward direction.

⑩ CD operation buttons

► : PLAY
DISC : This button does not function.
■ : STOP
II : PAUSE
⏮, ⏭ : TRACK SEARCH

⑫ TAPE II operation buttons

[For XD-J110]:
Same as Deck I operation buttons and Deck II control buttons on the CD cassette deck amplifier (Except for MUTE).

●(REC): To set to recording standby mode. The REC indicator lights and the direction indicators (◄ and ►) flash. Recording begins when you press the PLAY button (◄ or ►).
II(PAUSE): Temporarily stops tape travel. Cancels pause mode when pressed again or press the PLAY button.

⑬ SHIFT TAPE I button

To operate Deck I, press the desired deck operation while pressing this button. ●II (REC PAUSE) button does not function.

⑭ Timer operation buttons

SLEEP: Sets the sleep timer.
WAKE-UP: Timer playback setting/cancellation can be performed when the timer playback time has been set.

SNOOZE: Turns off power if pressed after timer playback begins. Timer playback begins again approx. 5 minutes later.

9. SPECIFICATIONS

Multi CD double deck amplifier: XD-J115M

Amplifier Section

[XD-J115M]

Music power (DIN) ..... 60W+60W (1 kHz, T.H.D. 1%, 8Ω)
Continuous Power Output (DIN) ..... 34W+34W
(1 kHz T.H.D. 1%, 8Ω)

Graphic equalizer frequency band ..... 60 Hz, 150 Hz, 400 Hz, 1 kHz, 2.4 kHz, 6 kHz, 15 kHz, ±7 dB
S/N (DIN, continuous power/50 mW)
PHONO ..... 68 dB/60 dB
Total Harmonic Distortion (40 Hz to 20,000 Hz, 22.5W, 8Ω)* ..... No more than 0.2%
Input sensitivity/impedance
PHONO (MM) ..... 2.5 mV/47 kΩ
VCR ..... 150 mV/25 kΩ

Double Deck Section

Systems ..... 4 track, 2-channel stereo
Heads ..... Recording/playback head x 1
Erasing head x 1
Playback head x 1
Motor ..... DC servo 2 speed motor x 2
Wow and Flutter ..... No more than 0.09% (W.PEAK)
Fast Winding Time ..... Approximately 105 seconds (C-60 tape)
Frequency Response (–20 dB recording):
Type I (Normal) tape ..... 35 Hz to 14,000 Hz ±6 dB (EIAJ)
Type II (HIGH/CrO2) tape ..... 35 Hz to 15,000 Hz ±6 dB (EIAJ)
Signal-to-Noise ratio
Dolby NR OFF ..... 56 dB
Noise Reduction Effect
Dolby B-type NR ON ..... More than 5 dB (at 5 kHz)

CD Section

Type ..... Compact disc digital audio system
Frequency response ..... 4 Hz—20 kHz
Number of channels ..... 2 channels (stereo)

Furnished Parts

Operating Instructions 1
Remote Control Unit 1
Dry Cell Batteries 2
Six-Compact disc-Magazine 1
Power cord 1

Miscellaneous

Power requirements ..... a.c. 220 Volts—, 50/60 Hz
Power Consumption 275W
Dimensions ..... 360 (W) x 300.5 (H) x 344 (D) mm
Weight (without package) ..... 10 kg

The Magazine Type Multi-Play CD Players with mark and the Magazines with the same mark are compatible for 5-inch (12 cm) discs.
