

QUARTZ SYNTHESIZER STEREO TUNER MT 11

MT 11

Wichtige Hinweise

Die Sicherheit des Gerätes muß nach einer Reparatur oder Überprüfung erhalten bleiben. Es dürfen deshalb keine konstruktiven Merkmale des Gerätes sicherheitsmindernd verändert werden (z. B. müssen Abdeckungen ordnungsgemäß angebracht sein).

Ersatzteile müssen hinsichtlich ihrer Daten und ihrer Merkmale dem getauschten Teil entsprechen, damit die Sicherheit des Gerätes nicht vermindert wird. Verwenden Sie deshalb nur Original-Ersatzteile.

Avvisi importanti

La sicurezza dell'apparecchio deve rimanere conservata anche dopo una riparazione o un controllo. Perciò non è permesso di variare connotati costruttivi dell'apparecchio in modo che non garantiscono la sicurezza originaria (p. es. gli schemi di protezione devono essere fissati a regola d'arte).

I pezzi di ricambio devono corrispondere al pezzo da sostituire nei loro dati e nei loro connotati per garantire la stessa sicurezza dell'apparecchio. Usate perciò solo ricambi originali.

Important note

The unit must remain safe after repair or checking. Therefore, no design features of the unit may be altered which would result in a reduction of safety (e. g. covers must be properly replaced).

With regards to their data and technical features, spare parts must correspond with the replaced part, so as not to reduce the safety of the unit. Therefore, only use original spare parts.

Recommandations importantes

L'appareil doit remplir les mêmes conditions de sécurité après une réparation ou une révision. Aucune caractéristique de construction de l'appareil ne doit donc être modifiée de telle sorte que la sécurité de l'appareil en soit diminuée (par ex., les couvercles doivent être remis en place correctement).

Les caractéristiques et les propriétés des pièces de rechange doivent coïncider avec celles de la pièce qui est remplacée afin de ne pas réduire la sécurité de l'appareil. N'utilisez donc que des pièces de rechange d'origine.

***) Bitte beachten:**

Beim Auswechseln der Keramikfilter QH 002 oder QH 003 müssen die auf dem Filter vorhandenen Farbcodierungen (siehe Fig. 2) gleich sein. Eventuell **beide** Filter auswechseln. Andernfalls besteht die Gefahr von NF-Verzerrungen und Fehlabtimmungen im Sendersuchlauf-Betrieb. Bei Wechsel des IS 02 oder der Filter QH 002 und QH 003, ist der IS 02 auf die genaue ZF **neu** zu programmieren, um die Frequenzanzeige zu justieren. Die Programmierung erfolgt nach Verbinden von PIN 18 und 38 des IS 02. Nach Drücken der Taste SS 13 (up) oder der Taste SS 9 (down), wird abwechselnd die Empfangsfrequenz und die ZF angezeigt. Die ZF-Frequenz ändert sich dabei in 10 kHz-Schritten.

Zur Bestimmung der ZF haben Sie 3 Möglichkeiten:

1. Durch Wobbeln der ZF mit einem Generator, der eine einstellbare Frequenzmarke liefert.
2. Für die Produktion ist ein Code für die genaue ZF angebracht, die den Originalfiltern entspricht. Der Code ist abzulesen nach Fig. 1 und besteht aus vorhandenen oder fehlenden (bzw. durchgebrannten) Widerständen RT 08...RT 012 (diese Möglichkeit kann nicht mehr nach Auswechseln der Filter angewandt werden).
3. Ablesen der Farbmarkierung der Keramikfilter!

***) Please note:**

When either of the two ceramic filters – QH 002 or QH 003 – is replaced, the color codes on the filters must be identical (see fig. 2). Change out both filters if necessary. Otherwise there is a danger of AF distortion and unsatisfactory tuning in the station search mode.

When changing out the IS 02 or filters QH 002 and QH 003, the IS 02 is to be reprogrammed to correspond to the exact IF before attempting to adjust the frequency display. Connect pins 18 and 38 on IS 02 to prepare for programming. After pressing button SS 13 (up) or SS 9 (down), the receiving frequency and the IF will be displayed alternately. The IF changes in steps of 10 kHz.

There are three ways to establish the IF:

1. By sweeping the IF with a generator which supplies an adjustable frequency mark.
2. A code is applied during production showing the exact IF to which the original filters correspond. This code can be interpreted using table 1 and is based on the presence or absence of the resistors between RT 08 and RT 012 (or the resistors may be physically present but burned through and thus non-conductive). This option cannot be utilized once the filters have been replaced.
3. By reading the color code on the ceramic filters!

***) Attenzione:**

Per cambiare i filtri di ceramica QH 002 o QH 003, i filtri in sostituzione devono avere le stesse strisce colorate (vedere fig. 2). Eventualmente sostituire **ambidue** i filtri. In caso contrario, sono possibili distorsioni della bassa frequenza ed errori di sintonia nella ricerca automatica della trasmittente.

Per la sostituzione dello IS 02 o dei filtri QH 002 e QH 003, lo IS 02 deve essere programmato **di nuovo** con precisione sulla media frequenza, per tarare l'indicatore di frequenza. La programmazione è effettuata dopo il collegamento dei PIN 18 e 38 dello IS 02. Dopo aver premuto il pulsante SS 13 (up) o il pulsante SS 9 (down), sono indicate reciprocamente la frequenza di ricezione e la media frequenza. La media frequenza varia in passi di 10 chilocicli.

Per determinare la media frequenza, si hanno tre possibilità:

1. Vobbulare la media frequenza con un generatore regolabile su una frequenza distinta.
2. Per la produzione, è applicato un codice per la media frequenza precisa che corrisponde ai filtri originali. Il codice si legge con l'aiuto della fig. 1. Esso è composto delle resistenze RT 08...RT 012, inserite o mancanti (o bruciate). Questa possibilità non è più valida dopo la sostituzione dei filtri.
3. Controllare le strisce colorate dei filtri di ceramica!

***) Attention:**

Lors de l'échange des filtres céramiques QH 002 ou QH 003, il faut que les codes couleur sur les filtres soient identiques (voir fig. 2). Echanger éventuellement les **deux** filtres. Sinon il y a risque de distorsions BF et d'erreurs d'accord en recherche d'émetteurs.

En cas de changement du composant IS 02 ou des filtres QH 002 et QH 003, il faut **reprogrammer** l'IS 02 sur la FI exacte, pour ajuster l'indication de fréquence. La programmation s'effectue après avoir relié les PIN 18 et 38 de l'IS 02. Après pression de la touche SS 13 (up) ou de la touche SS 9 (down), la fréquence de réception et la FI seront affichées alternativement. La FI varie alors par pas de 10 kHz.

Pour déterminer la FI, vous avez trois possibilités:

1. Par wobulation de la FI avec un générateur qui fournit une marque de fréquence réglable.
2. Pour la production, on dispose d'un code indiquant la FI exacte correspondant aux filtres originaux. Le code peut être lu à l'aide du fig. 1 et il est composé de résistances existantes ou manquantes (ou claquées) RT 08...RT 012 (on n'a plus cette possibilité après l'échange des filtres).
3. Par lecture du code couleur sur les filtres céramiques.
