# GENERAL TROUBLESHOOTING CHART

If the amplifier is otherwise operating satisfactorily, the more common causes of trouble may generally be attributed to the following:

1. Incorrect connections or loose terminal contacts. Check the speakers, record player, tape deck, antenna and line cord.
2. Improper operation. Before operating any audio com-

ponent, be sure to read the manufacturer's instructions.

3. Improper location of audio components. The proper positioning of components, such as speakers and turntable, is vital to stereo.

4. Defective audio components.

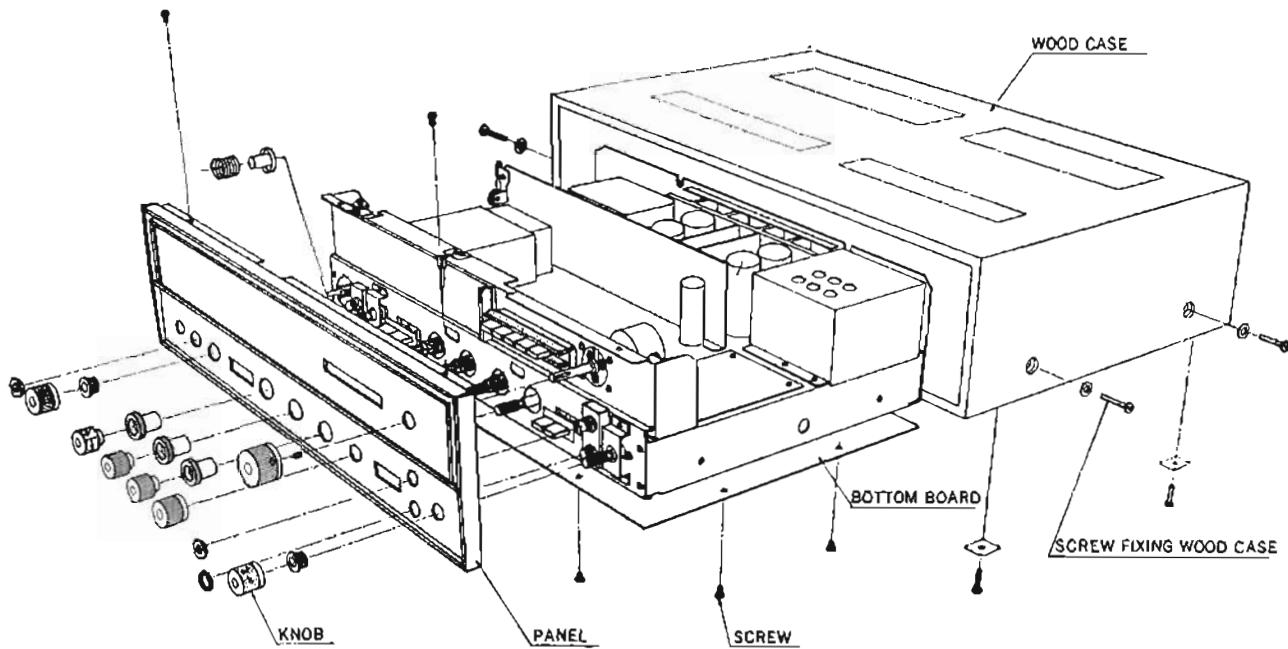

The following are some other common causes of malfunction and what to do about them.

PROGRAM	SYMPTOM	PROBABLE CAUSE	WHAT TO DO
AM, FM or FM-MPX reception	A. Constant or intermittent noise heard at times or in a certain area.	<ul style="list-style-type: none"> <li>* Discharge or oscillation caused by electrical appliances, such as fluorescent lamp, TV set, D.C. motor rectifier or oscillator</li> <li>* Natural phenomena, such as atmospherics, static or thunders bolts</li> <li>* Insufficient antenna input due to ferroconcrete wall or long distance from the station</li> <li>* Wave interference from other electrical appliances</li> </ul>	<ul style="list-style-type: none"> <li>* Attach a noise limiter to the electrical appliance, or attach it to the amplifier's power source</li> <li>* Install an outdoor antenna and ground the amplifier to raise the signal-to-noise ratio.</li> <li>* Reverse the power cord plug-receptacle connections.</li> <li>* If the noise occurs at a certain frequency, attach a wave trap to the ANT. input.</li> <li>* Keep the set at a proper distance from other electrical appliances.</li> </ul>
	B. The needle of the signal and tune meter does not move sharply	<ul style="list-style-type: none"> <li>* Receiver is located in a weak signal area</li> </ul>	<ul style="list-style-type: none"> <li>* The needle swing varies depending on the stations</li> </ul>
	C. The zero point of the meter diverges much	<ul style="list-style-type: none"> <li>* Regional difference in field intensity.</li> </ul>	<ul style="list-style-type: none"> <li>* The unit is not at fault.</li> </ul>
AM reception	A. Noise heard at a particular time of a day, in a certain area or over part of dial	<ul style="list-style-type: none"> <li>* Due to the nature of AM broadcasts</li> </ul>	<ul style="list-style-type: none"> <li>* Install the antenna for maximum antenna efficiency. See "ANTENNA" in the operating instructions.</li> <li>* In some cases, the noise can be eliminated by grounding the amplifier or reversing the power cord plug-receptacle connections.</li> </ul>
	B. High-frequency noise	<ul style="list-style-type: none"> <li>* Adjacent-channel interference or beat interference</li> <li>* TV set is too close to audio system</li> </ul>	<ul style="list-style-type: none"> <li>* Although such noise cannot be eliminated by the amplifier, it is advisable to adjust the TREBLE control from midpoint to left and switch on the HIGH FILTER</li> <li>* Keep the TV set at a proper distance from the audio system.</li> </ul>
FM reception	A. Noisy	<ul style="list-style-type: none"> <li>* Poor noise limitter effect or too low SN ratio due to insufficient antenna input.</li> </ul> <p>Note: FM reception is affected considerably by transmission conditions of stations: power and antenna efficiency. As a result, you may receive one station quite well while receiving another station poorly</p>	<ul style="list-style-type: none"> <li>* Install the antenna (supplied) for maximum signal strength.</li> <li>* If this does not prove effective, use an outdoor antenna designed exclusively for FM. When you use a TV antenna for both TV and FM with a splitter, make sure TV reception is not affected</li> <li>* An excessively long antenna may cause noise</li> </ul>

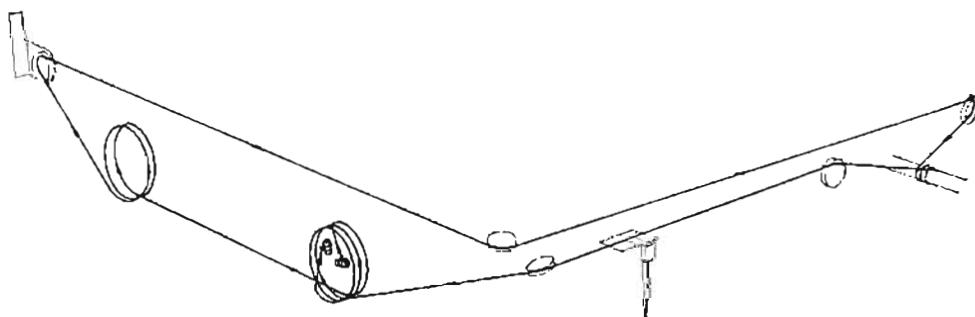

PROGRAM	SYMPTOM	PROBABLE CAUSE	WHAT TO DO
FM reception (cont'd)	B. A series of pops	* Ignition noise caused by starting of an automobile engine	* Install the antenna and its lead-in wire in proper distance from the road or raise the antenna input as described above
	C. Tuning noise between stations	* This results from the nature of the FM reception. As the station signal becomes weak, the noise limiter effect is decreased, and the amplification of the limiter, in turn, is enlarged, generating a noise	* Release the MUTING OFF button
FM-MPX reception	A. Noise heard during FM-MPX reception while not heard during FM mono reception	* Weaker signal because the service area of the FM-MPX broadcast is only half that of the FM mono broadcast	* Install the antenna for maximum antenna input * Switch on the high filter and/or turn the TREBLE control from midpoint, left
	B. Clearness of channel separation is decreased during reception	* Excess heat	* Circulation of air is important to the amplifier. Be sure that air is flowing under the amplifier.
	C. The stereo indicator blinks on and off	* Interference	* The indicator is not at fault, adjust VR <sub>401</sub>
	D. The stereo indicator blinks on and off even though stereo station is not received	* Interference	* The indicator is not at fault, adjust VR <sub>401</sub>
Record playing or tape playback	A. Hum or howling	* Record player placed directly on speaker box * Wire other than shielded wire used * Loose terminal contact * Shielded wire too close to line cord, fluorescent lamp or other electrical appliances * Nearby amateur radio station or TV transmission antenna	* Place a cushion between the player and the speaker box or place them away from each other * The connecting shielded wire should be as short as possible * Switch on the LOW FILTER and adjust the BASS control from midpoint, left * Consult the nearest Radio Regulatory Bureau
	B. Surface noise	* Worn or old record * Worn needle * Needle dusty * Improper needle pressure	* Recondition the playback head of the tape deck or the needle of the record player * Adjust the TREBLE control from midpoint, left * Push on the HIGH FILTER
All stereo programs	BALANCE control is not at midpoint when equal sound comes from left and right channels	* It is important to adjust for equal sound from both channels. It should not always be set to the midpoint	* Push on the MONO switch and then set the BALANCE control to a position where equal sound comes from both channels

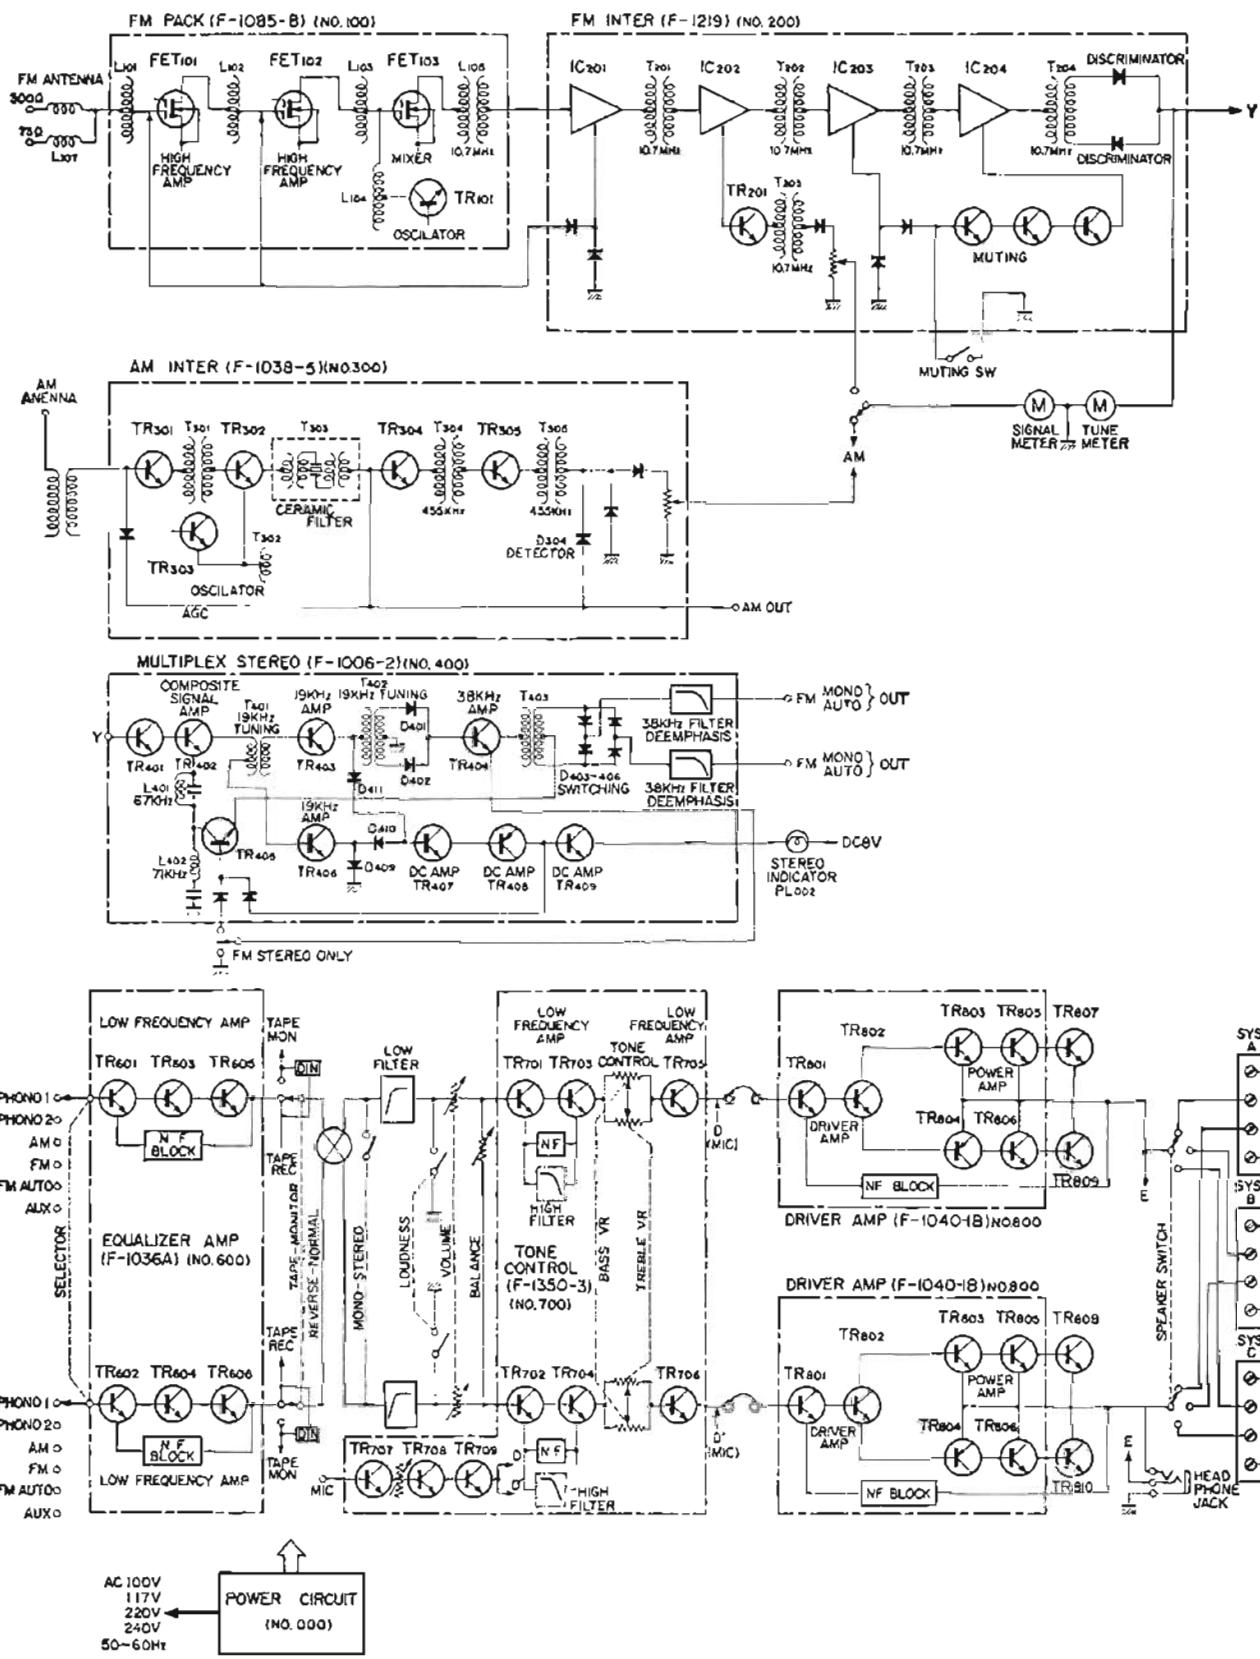

# DISASSEMBLY PROCEDURE

## REMOVING THE WOOD CASE, FRONT PANEL AND BOTTOM PLATE

## DIAL MECHANISM

# CUSTOM MOUNTING

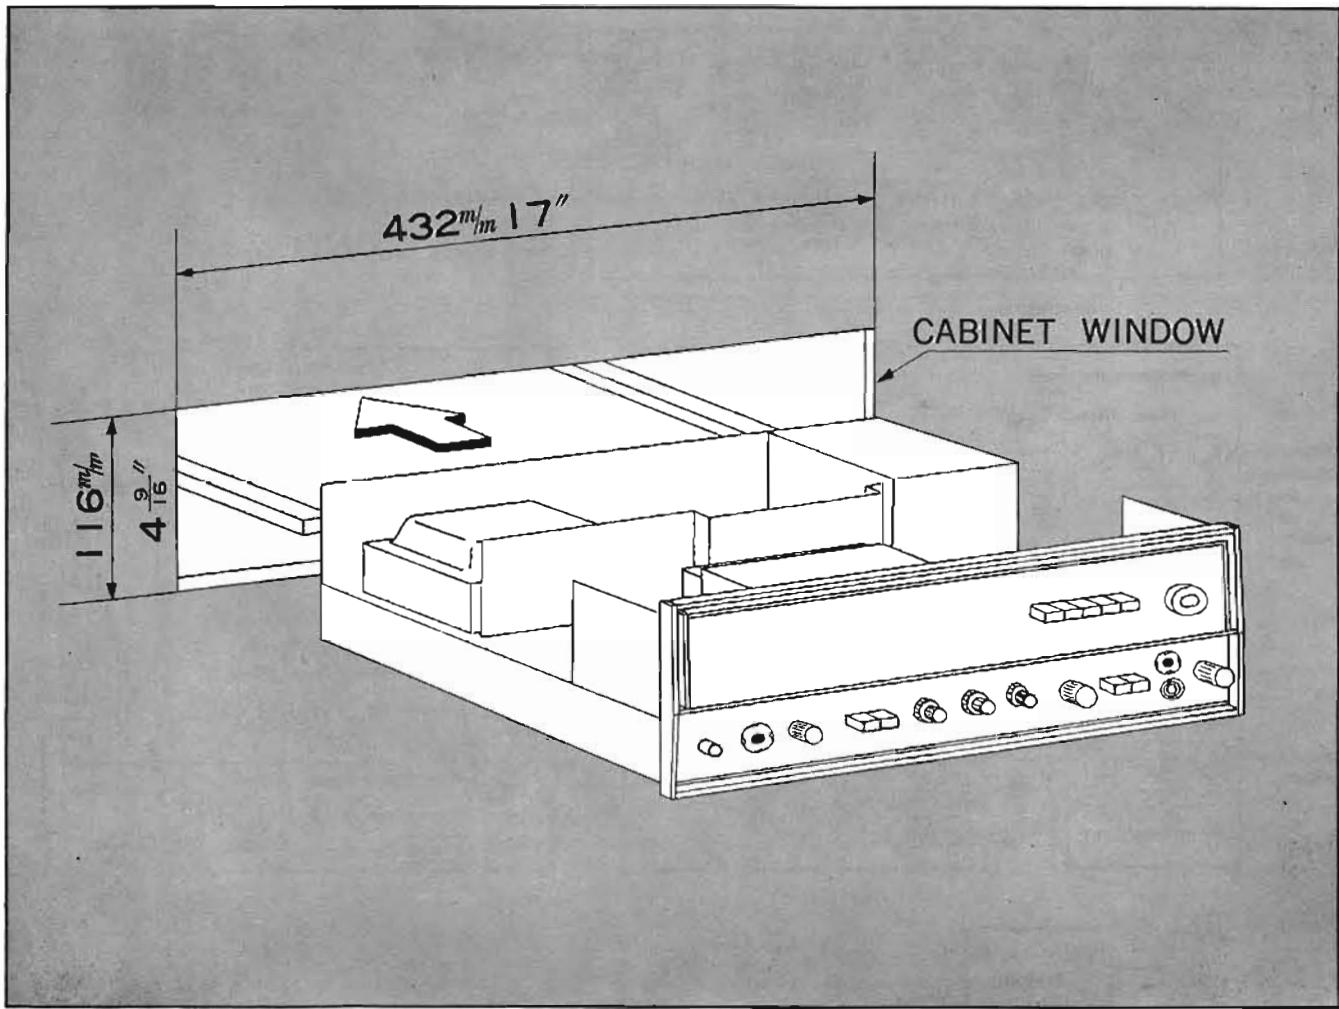

This diagram shows the size and dimensions required for mounting the 5000X into a custom-made cabinet. Note that ample space is provided for complete air circulation above and below the unit.

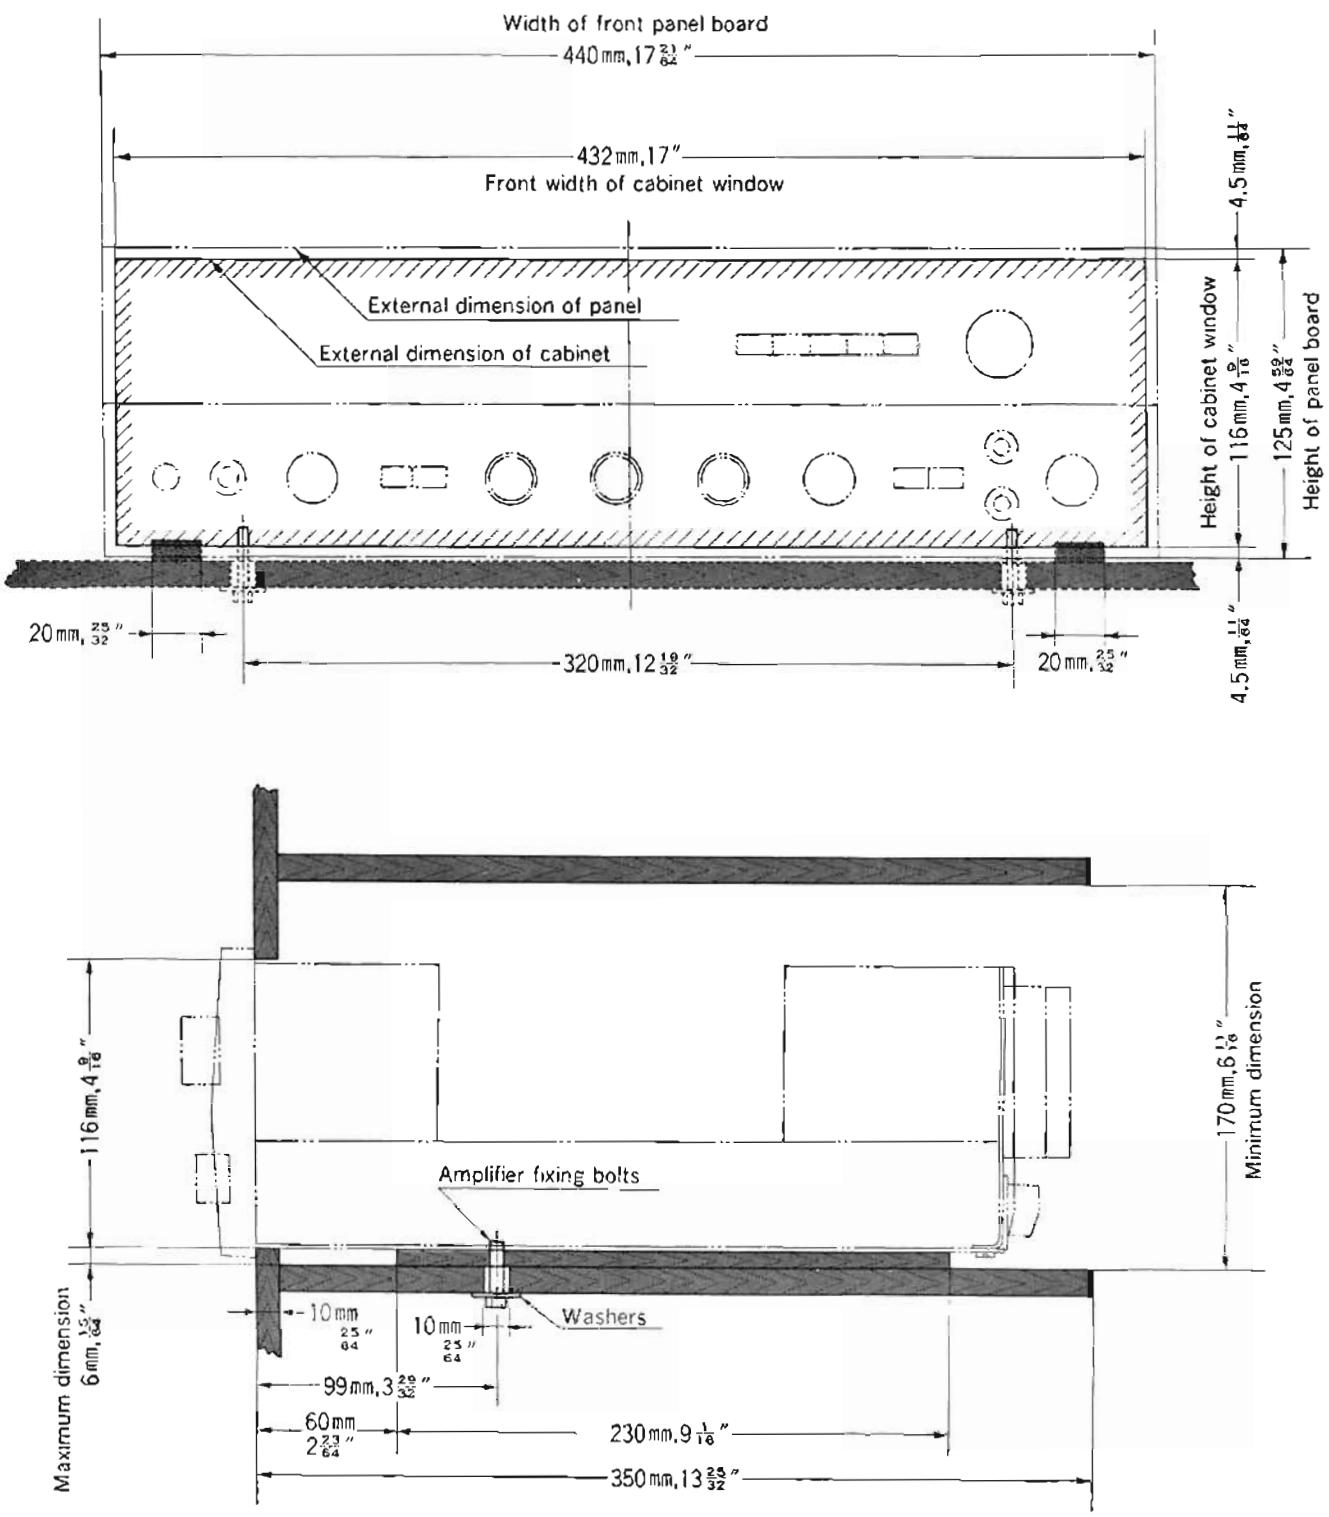

1. Be sure the cabinet cutout measures  $17'' \times 4\frac{9}{16}''$  as indicated in the diagram.
2. Place two boards on the floor of the cabinet as illustrated. Boards should measure  $\frac{25}{32}'' \times \frac{15}{64}'' \times 9\frac{1}{16}''$ .

3. Drill two holes in the bottom of the cabinet at points corresponding to holes in the bottom of the receiver.

4. Remove the receiver from the wood case (Refer to the section entitled "DISASSEMBLY PROCEDURE").

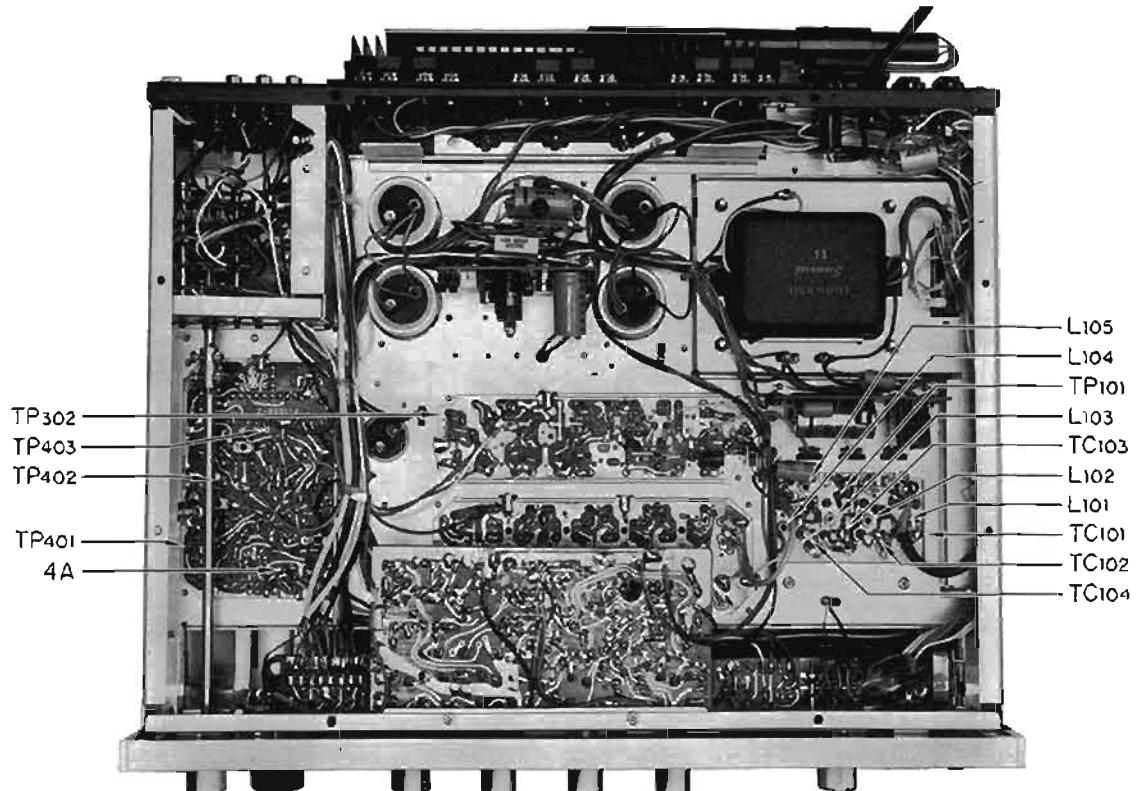

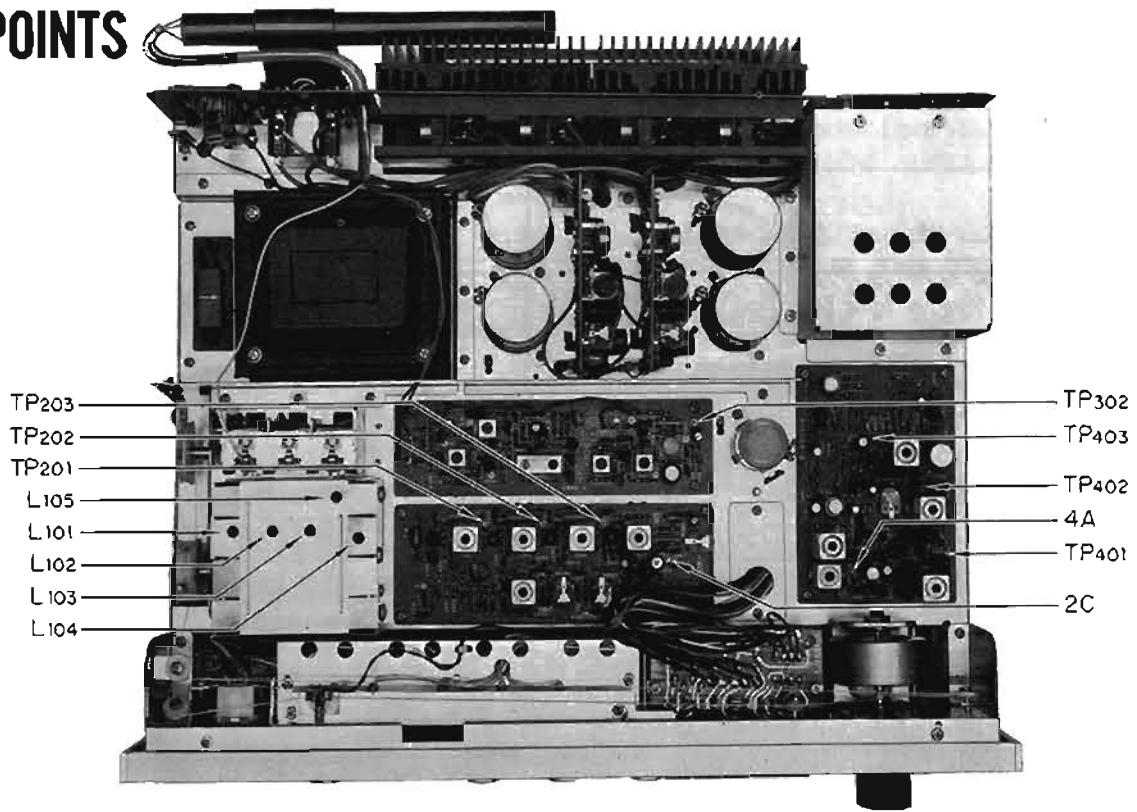

5. Insert the 5000X into the cabinet through the cutout until the edges of its front panel are flush with the cabinet, and secure both receiver and cabinet with hexagonheaded bolts and washers which were formerly used for securing the wood case.

# ALIGNMENT

## TEST POINTS

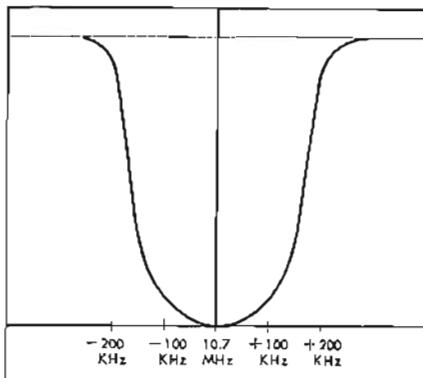

# FM ALIGNMENT PROCEDURE

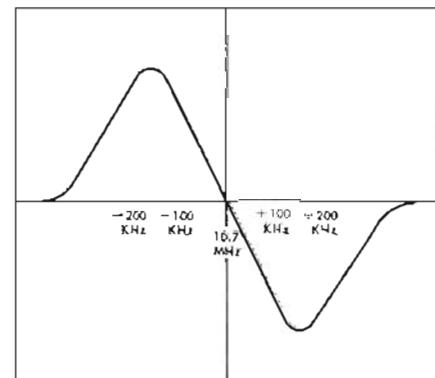

**NOTE:** To align, set the signal generator level to minimum.  
 Turn tuning gang fully.  
 Center carrier wave  
 Set pointer at reference mark.

STEP	ALIGN	GENERATOR	FEED SIGNAL	OUTPUT INDICATOR	DIAL SETTING	ADJUST	ADJUST FOR
1.	IF Transformer	10.7 MHz $\pm 200$ kHz	Sweep signal is sent to TP <sub>101</sub> via the 10 pF ceramic capacitor	Oscilloscope is connected to TP <sub>201,202</sub> and 203 via the 10 pF ceramic capacitor with probe		Top and bottom sides of T <sub>201,202</sub> and T <sub>203</sub>	Best I.F.T. wave form
2.	Discriminator	10.7 MHz $\pm 200$ kHz	Sweep signal is sent to TP <sub>101</sub> via the 10 pF ceramic capacitor	Oscilloscope is connected to 2C		FM. Discriminator transformer T <sub>204</sub> top and bottom sides	S curve
3.	O.S.C.	90 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	90 MHz	O.S.C. coil L <sub>104</sub>	Maximum
4.	O.S.C.	106 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	106 MHz	O.S.C. trimmer TC <sub>104</sub>	Maximum
5.	Reiterate 3 and 4.						
6.	High-frequency Amp. Circuit	90 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	90 MHz	Antenna coil L <sub>101</sub> , L <sub>102</sub> and L <sub>103</sub>	Maximum
7.	High-frequency Amp. Circuit	106 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	106 MHz	Trimmer TC <sub>101</sub> , TC <sub>102</sub> and TC <sub>103</sub>	Maximum
8.	Reiterate 6 and 7.						

FM IF WAVE FORM

FM DISCRIMINATOR WAVE FORM

# ALIGNMENT

## FM MULTIPLEX ALIGNMENT PROCEDURE

Do not attempt to align the Multiplex Circuit unless the following equipment is available:

- a. Multiplex Stereo Generator b. Oscilloscope c. AC. V.T.V.M. d. Audio Oscillator e. FM Signal Generator

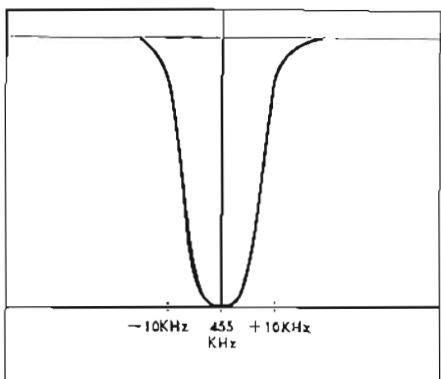

STEP	ALIGN	GENERATOR	FEED SIGNAL	OUTPUT INDICATOR	ADJUST	ADJUST FOR
1.	67 kHz Trap	67 kHz Audio Signal	To 4A	V.T.V.M. at TP <sub>403</sub>	L <sub>401</sub>	Minimum
2.	71 kHz Trap	71 kHz Audio Signal	To 4A	V.T.V.M. at TP <sub>408</sub>	L <sub>402</sub>	Minimum
3.	19 kHz Transformer	FM Signal Gen. Modulated 30% by STEREO Gen. sub-channel	To antenna terminals Tune to signal	V.T.V.M. and Oscilloscope at TP <sub>401</sub>	T <sub>401</sub>	Maximum
4.	19 kHz Transformer	FM Signal Gen. Modulated 30% by STEREO Gen. sub-channel	To antenna terminals Tune to signal	V.T.V.M. and Oscilloscope at TP <sub>402</sub>	T <sub>402</sub>	Maximum
5.	38 kHz Transformer	FM Signal Gen. Modulated 30% by STEREO Gen. sub-channel	To antenna terminals Tune to signal	V.T.V.M. and Oscilloscope at TP <sub>403</sub>	T <sub>403</sub>	Maximum
6.	38 kHz Transformer and Separation VR	FM Signal Gen. Modulated 30% by STEREO Signal Gen. channel-L	To antenna terminals Tune to signal	V.T.V.M. and Oscilloscope at output load channel-R	T <sub>403</sub> within $\frac{1}{4}$ turn and Separation VR (VR <sub>001</sub> )	Channel-R Minimum

# AM ALIGNMENT PROCEDURE

NOTE: To align, set the signal generator level to minimum

STEP	ALIGN	GENERATOR	FEED SIGNAL	OUTPUT INDICATOR	DIAL SETTING	ADJUST	ADJUST FOR
1.	I.F. Transformer	455 kHz ±30 kHz Sweep-generator	Antenna terminals	Oscilloscope and V.T.V.M. at TP <sub>302</sub>		Top side from the 1st I.F.T. (T <sub>302</sub> ) to the 3rd I.F.T. (T <sub>305</sub> )	Best I.F.T. wave form
2.	O.S.C.	AM-generator 535 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	535 kHz	O.S.C. Coil T <sub>302</sub>	Maximum
3.	O.S.C.	AM-generator 1600 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	1600 kHz	O.S.C. Trimmer TC <sub>303</sub>	Maximum
4.	Reiterate 2 and 3						
5.	RF amp.	AM-generator 600 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	600 kHz	RF transformer T <sub>301</sub>	Maximum
6.	Antenna circuit	AM-generator 600 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	600 kHz	Ferrite bar Antenna L <sub>001</sub>	Maximum
7.	RF amp.	AM-generator 1400 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	1400 kHz	RF Trimmer TC <sub>302</sub>	Maximum
8.	Antenna circuit	AM-generator 1400 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	1400 kHz	Antenna circuit Trimmer TC <sub>301</sub>	Maximum
9.	Reiterate 5, 6, 7, 8.						

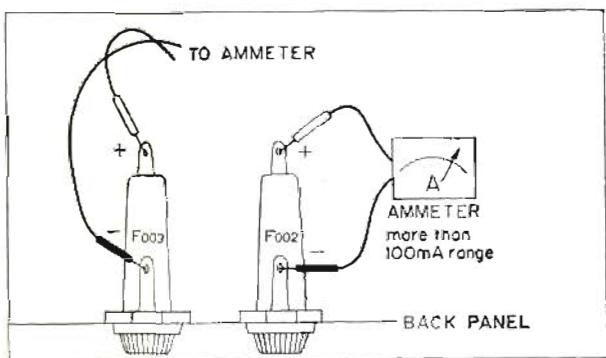

## AM IF WAVE FORM

# ALIGNMENT

## 1. CURRENT ADJUSTMENT

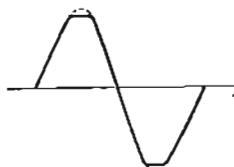

STEP	SETTING OF AMMETER (TESTER)	WHAT TO DO	NOTE
1.		Remove F <sub>002</sub> and F <sub>003</sub> .	
2.		Set VR <sub>802</sub> (left and right channel) to minimum.	Use an ammeter having 100mA range.
3.		Set VR <sub>703</sub> and VR <sub>704</sub> (VOLUME) to minimum.	
4.		Push the POWER switch ON.	Be sure to switch on 1st and then connect the ammeter.
5.	100mA range.	Connect the ammeter to F <sub>002</sub> as illustrated in Fig. 1.	
6.		Turn VR <sub>802</sub> (left channel) clockwise and adjust current to 20 to 26 mA.	
7.	100mA range.	Push the POWER switch OFF and attach F <sub>002</sub> in place.	
8.		Push the POWER switch ON and connect the ammeter to F <sub>003</sub> as illustrated in Fig. 1.	
9.		Turn VR <sub>802</sub> (right channel) clockwise and adjust current to 20 to 26mA.	
10.		Attach F <sub>003</sub> in place.	

(Fig. 1) QUICK-ACTING FUSE HOLDER

## 2. OUTPUT ADJUSTMENT

STEP	WHAT TO DO	NOTE
1.	Adjust the volume control to minimum.	
2.	Set an oscillator to 1,000 Hz and connect it to the LEFT AUX input.	The oscillator used should have the oscillation frequency of 20 to 20,000 Hz and the output voltage of more than 200mV.
3.	Set the SELECTOR switch to AUX.	Set other controls and switches as follows:  BALANCE to CENTER TAPE MON to OFF MODE to STEREO TONE to CENTER Other to OFF
4.	Connect a 8- or 16-ohm load resistor having capacitor of more than 60 watts to the LEFT SPEAKER output.	
5.	Connect an oscilloscope to the SPEAKER terminal.	
6.	Push the POWER switch on and advance the volume little by little. Check the output at the terminal by means of the oscilloscope.	
7.	Adjust VR <sub>801</sub> (left channel) so that the fronts of sine wave are clipped simultaneously.	
8.	Adjust the right channel as above.
