

SERVICE MANUAL

COMPUTERIZED FULLY AUTOMATIC
DIRECT-DRIVE TURNTABLE

SANSUI FR-D45

● SPECIFICATIONS

Type	Two-speed direct-driven
Speeds	33-1/3, 45 rpm
Platter	Aluminum alloy die-cast 315 mm (12-13/32") diameter
Motor	FG Servo DC Motor
Wow and flutter	0.025 % (W.R.M.S.)
S/N	Better than 60 dB (IEC-B)
Rumble	Better than 72 dB (DIN-B)
Tonearm	
Tonearm length	220 mm (8-11/16")
Overhang	17.5 mm (3/4")
Applicable cartridge weight	4 to 10 g
Dimensions	440 mm (17-5/16") W 127 mm (5") H 374 mm (14-11/16") D
Weight	5.6 kg (12.3 lbs) net 7.0 kg (15.4 lbs) packed
Power consumption	28 W

- The power voltage is adjusted to the one of the area where bought the unit.

Specifications of the cartridge (applicable only to the units with cartridge)

Model SC-50

Type	Induced magnet
Frequency response	10 ~ 20,000 Hz
Output voltage	3.0 mV per channel (1,000 Hz, 35.4 mm/sec)
Load impedance	47 kΩ
Tracking force	2.5 g
Stylus	0.6 mil, diamond spherical (SN-50)

Model SV-101

Type	Dual magnet
Frequency response	10 ~ 20,000 Hz
Output voltage	2.5 mV per channel (1,000 Hz, 35.4 mm/sec)
Load impedance	47 kΩ
Tracking force	2 g
Stylus	0.6 mil, diamond spherical (SN-101)

Model SV-202

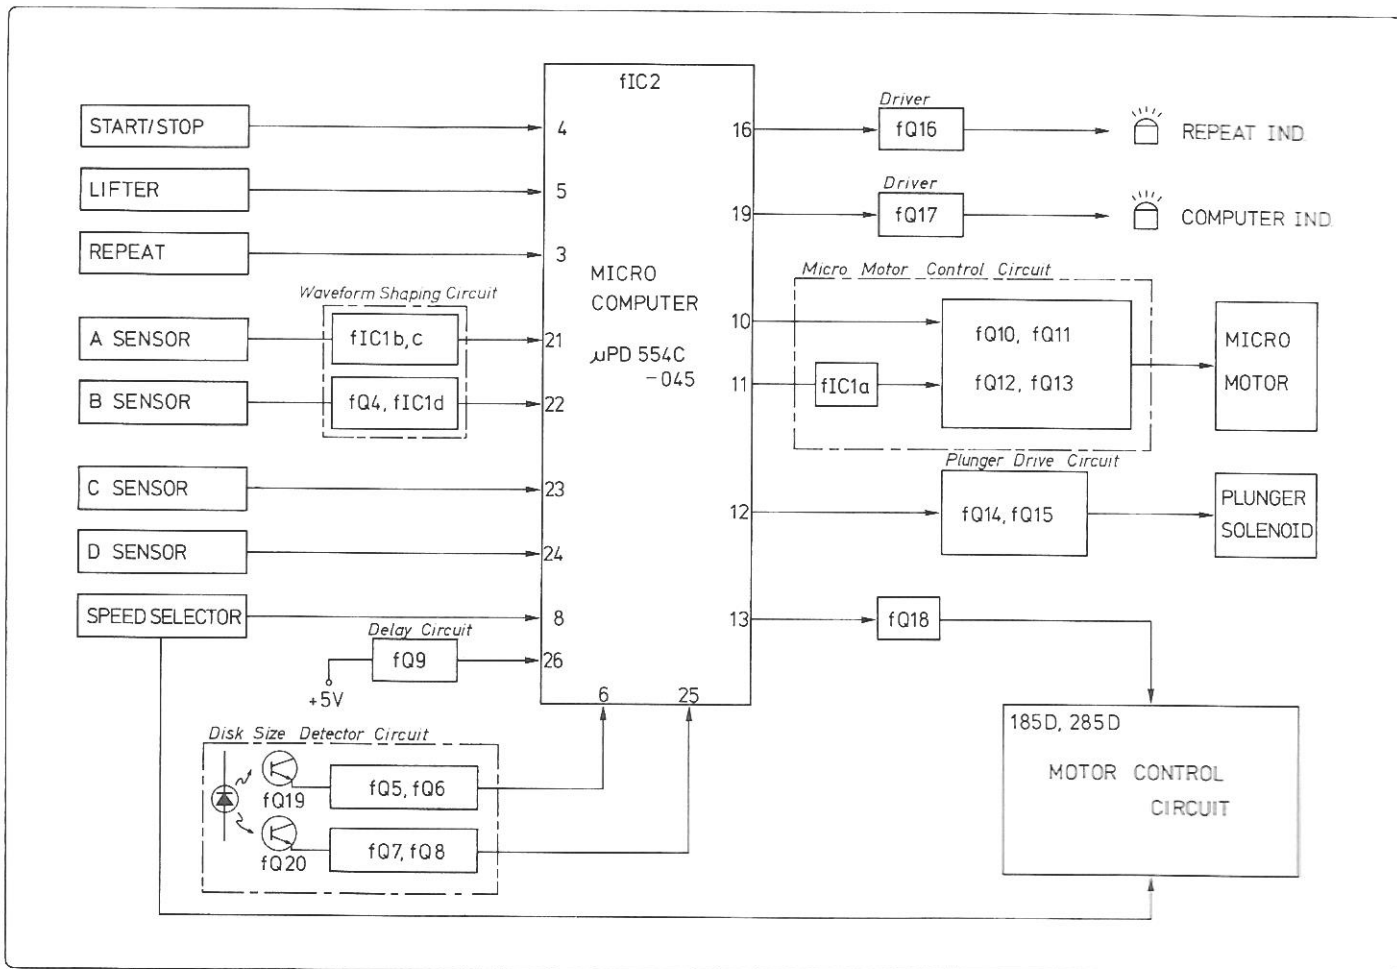

Type	Dual magnet
Frequency response	10 ~ 20,000 Hz
Output voltage	2.5 mV per channel (1,000 Hz, 35.4 m/sec)
Load impedance	47 kΩ
Tracking force	2 g
Stylus	0.6 mil, diamond spherical (SN-202)

- * Design and specifications subject to change without notice for improvements.

Sansui

SANSUI ELECTRIC CO., LTD.

1. BLOCK DIAGRAM

2. OPERATIONS

2-1. General

This model, FR-D45 is provided an automatic disk size detecting function in addition to the full automatic system of Sansui FR-D4/Q5.

* See FR-D4 Service Manual for operations of the automatic mechanism assembly, arm position sensor, and lifter position sensor.

* The control circuit of the FR-D45 is divided into three portions: a servo circuit to control the DD motor, a microcomputer μ PD554C to control the tone arm mainly, and its peripheral circuits.

See XR-Q9 Service Manual for operations of the microcomputer μ PD554C and its peripheral circuits.

* The automatic disk size (30 cm and 17 cm) detection is carried out by placing a prism between the LED (fLD1) in Fig. 2-1 and the photo-transistor fQ19. In case of a 30 cm disk, the light from the LED is intercepted by the disk and therefore the photo-transistor fQ19 is turned OFF. In 17 cm disk, the light from the LED reaches the photo-transistor fQ19 through the prism and therefore the photo-transistor fQ19 is turned ON.

The ON/OFF signal detected by the photo-transistor is then inputted to the pin No. 6 of the microcomputer μ PD554C. The potential level of the pin No. 6 is in L level when the fQ19 is OFF (30 cm disk) and in H level when the fQ19 is ON (17 cm disk).

In addition, the photo-transistor fQ20 detects whether or not a disk is placed on the turntable. When no disk is on the turntable, the light from the LED turns the fQ20 ON to change the pin No. 25 of the μ PD554C from L to H level. When the pin No. 25 is in H level, the return operation is performed even by depressing the start button.

2-2. Control System of DD Motor 285D

The control system of the DD motor 285D is configured by a waveform shaping IC/PD101 and a motor control IC/PD102, as shown in Fig. 2-2 which have newly developed by Sansui.

A. Operation of Waveform Shaping IC/PD101

Fig. 2-4 shows a block diagram of the PD101. The pulse signal detected by the speed detection coil (eL701) is inputted to the pin No. 1 of the PD101 as a speed proportion pulse signal (50 Hz in 33 rpm, 67.5 Hz in 45 rpm). The inputted pulse signal is amplified by the differential amplifier, fed to the waveform shaper circuit to change the waveform into a trapezoid shape by the waveform shaping capacitor eC11 connected to the pin No. 5, and outputted through the capacitor eC14 from the pin No. 6.

B. Operation of DD Motor Control IC/PD102

Fig. 2-3 shows a block diagram of the PD102. The pulse signals detected by the position sensor coils eLn-1, eLn-2, and eLn-3 are inputted to the pins No. 2, 3, and 4, respectively.

with 120-degree phase shift in electrical angle. The upper envelope of the inputted pulse signals is detected by the envelope detection circuit, as shown in Fig. 2-6, and then inputted to the full-wave drive switching circuit in Fig. 2-5.

After inputted to the pin No. 5, the trapezoid output signal, waveform of which has already been shaped by the PD101, is fed to the sample & hold circuit through the sample pulse generator, where conversion of frequency into voltage (F/V conversion) is carried out to generate a voltage inversely proportional to the speed.

This voltage is integrated by the low-pass filter and inputted to the DC servo amplifier (differential amplifier).

This voltage is compared with the reference voltage, and the lower side of the waveform outputted from the full-wave switching circuit is servo-controlled to regulate the motor speed. The output waveform of the driving coils eLm-1, eLm-2 and eLm-3 should look like the ones shown in Fig. 2-7. The resistor of 2.2Ω connected to the pin No. 11 is used for differential switching.

Fig. 2-2 Construction of 285D DD Motor Control System

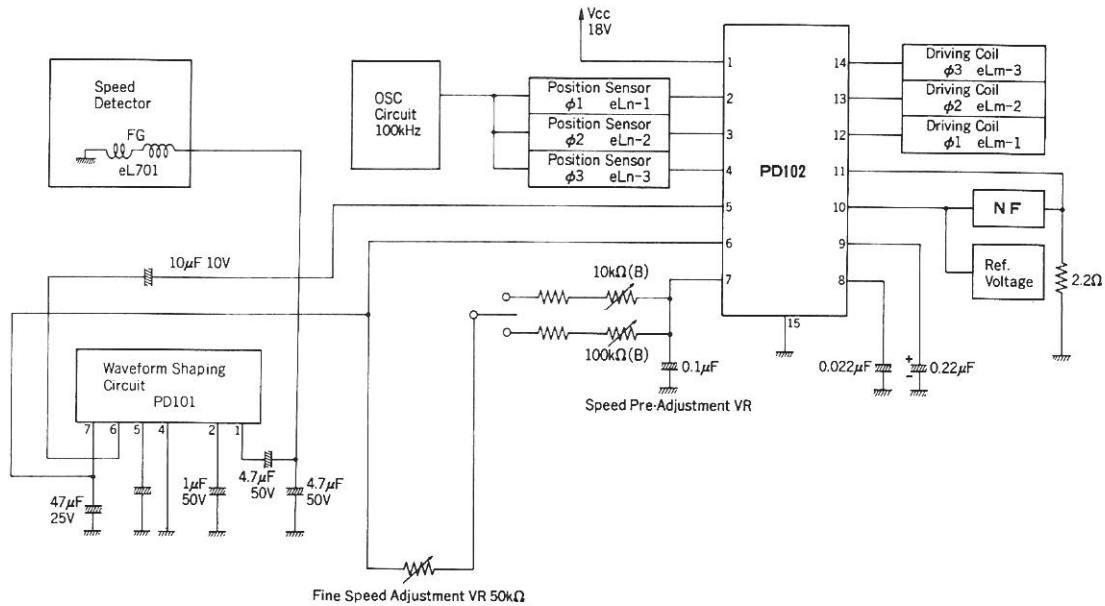

Fig. 2-3 Block Diagram of Motor Control IC/PD102

* Each voltage in parenthesis appears at 33rpm.

Fig. 2-4 Block Diagram of Waveform Shaping IC/PD101.

Fig. 2-7

• Output Waveform of Driving Coil

1) DC Servo OFF (Waveform appeared at high speed rotation or at start of motor)

2) DC Servo ON

Fig. 2-5

Fig. 2-6

3. ADJUSTMENTS (See Top View on Page 7)

3-1. Adjustment of Screen Plate Installation Position

Adjust the position whenever the tonearm is replaced. With the tonearm placed on the arm rest, install the screen plate to the tonearm shaft, as shown in Figs. 3-1 (A) and (B).

Fig. 3-1 Installation of Screen Plate

(A) Side View of Screen Plate

(B) Bottom View of Screen Plate

Note: Tonearm is placed on its rest

3-2. Adjustment of B Sensor Output

A. Output level adjustment

- (1) Connect the \oplus terminal of an oscilloscope to the TP₁ of S0062 and \ominus terminal to the TP₃(GND), and set the selector switch DC/AC to DC and the test ranges to 2 V/div and 10 msec/div.
- (2) Shift the tonearm by hand to the lead-out groove on the record disc, and slowly move the tonearm right and left in such a way that it takes about two seconds for the slit C of Fig. 3-1 to pass through between the LED and the phototransistor.
- (3) During this movement, adjust the output level by rotating the volume (fVR₁) of S0062 so as to be set between 4.5 and 8 V without any distortion of the waveform, as shown in Fig. 3-2.
- (4) If it is impossible to adjust the output level to 4.5 V or more, reduce the gap distance between the screen plate and the photo sensor assembly to 0.8 mm or less, as shown in Fig. 3-1.

Fig. 3-2 Output Waveform Adjustment on B-Sensor

B. Duty ratio adjustment of output pulse waveform

- (1) Connect an oscilloscope across the TP₂ of S0062 and GND, and set the selector switch to DC and the test ranges to 2 V/div and 0.01 sec/div.
- (2) Shift the tonearm by hand to the lead-out groove on the record disc, and slowly move the tonearm right and left in such a way that it takes about two seconds for the slit C of Fig. 3-1 to pass through between the LED and the phototransistor.
- (3) During this movement, adjust the duty ratio of the output pulse waveform by rotating the volume (fVR₂) of S0062, as shown in Fig. 3-3.

Fig. 3-3

3-3. Lead-in Position Adjustment

- (1) Confirm that the screen plate is installed as shown in Figs. 3-1 (A), (B).
- (2) Turn the adjusting cam (See 6-1. Top View, 5. Exploded View) so as to lower the stylus to the middle of lead-in groove.

3-4. Speed Adjustment

- 1-a) Set the Pitch Control (hVR₁) on control panel to center position.
- 2-a) Set the Speed Selector to 33 (r.p.m.)
- 2-b) Adjust eVR₃₃ on the D.D. Motor Control Circuit Board (See 6-2. Bottom View on page 7.) so as to standstill the strobo marking pattern.
- 3-a) Set the Speed Selector to 45 (r.p.m.)
- 3-b) Adjust eVR₄₅ on the D.D. Motor Control Circuit Board (See 6-2. Bottom View on page 7.) so as to standstill the strobo marking pattern.

3-5. Lifter Height Adjustment

Adjust the stylus tip and the disk as shown in Fig. 3-4, by rotating the screw (B) (See 6-1. Top View on page 7).

Fig. 3-4

3-6. Gap Adjustment between Plunger Solenoid and Plunger Plate

When the automatic mechanism assembly parts such as the tonearm assembly, slit plate, TA drum, or clutch plate are replaced with new ones, adjust a gap between the plunger solenoid and the plunger plate so as to be 0.2 to 0.3 mm by pushing the plunger plate up as shown in Fig. 3-5.

3-7. Adjustment of Disc Size Detector LED Position

When the disc size detector LED is replaced, adjust its position as shown in Fig. 3-6.

Fig. 3-6

4. PARTS LOCATION & PARTS LIST

4-1. S-0062 T.A. Control Circuit Board (Stock No. 13051101)

• Since some of capacitors and resistors are omitted from parts lists in this Service Manual, refer to the Common Parts List for capacitors & resistors, which was appended previously to Sansui Manual.

RESISTORS
Are in ohms, 1/4 Watts, ±5% Tolerance
Unless Otherwise Noted. K: kΩ, M: MΩ

CAPACITORS
Are in μF, Unless Otherwise Noted. P: pF

Each D.C. Voltage measured by the instruments described below shows the nominal value in volts at 33% rpm. Measuring instruments. Volt Meter Oscilloscope

MOTOR-CONTROL (e)

- hQ1, 2SC1983
- hQ2, 2SC1844 (F,E)
- hQ3, 2SC1735 (D,E)
- hQ4, 2SC1211 (D)
- hQ5, 2SB527 (D,E)
- hQ6, 2SA1015 (Y,GR)
- hQ7, 2SA733A (P,Q)
- hD1, RB-152
- hD2, RD5.1E

SYMBOL OF FUNCTION
 (e) MOTOR-CONTROL
 (f) T.A CONTROL
 (g) INDICATOR
 (h) POWER SUPPLY

Note:
 As to C.S.A., U.L., B.S., E.U., A.S. and XX marked in the schematic diagram, note the followings:
 C.S.A., U.L. Circuit in the unit which is applicable to the Canada and U.S.A. under industrial standards.
 B.S. Circuit in the unit which is applicable to British under industrial standards.
 E.U. Circuit in the unit which is applicable to Sweden, Denmark, Norway, Finland, West Germany, and Switzerland under industrial standards.
 A.S. Circuit in the unit which is applicable to Australia under industrial standards.
 XX Circuit in the unit which is applicable to other countries excepting mentioned above.

8. MAIN PARTS REPLACEMENT (See 5. Exploded View on Page 6)

8-1. Replacement of Tonearm Ass'y (55)

- 1) Remove the bottom cover.
- 2) Loosen 3 screws (7) to remove the mechanism ass'y.
- 3) Loosen the installing screw to remove the TA drum (36).
- 4) Loosen the screw (37) to remove the screen plate (38).
- 5) Remove all lead wires of the tonearm soldered on the terminal board (S-0022).
- 6) The tonearm can be pulled out by loosening the fixing nut.

8-2. Replacement of Clutch Plate (1) (14)

- 1) Perform items 1), 2) "4-1. Replacement of Tonearm Ass'y" first.
- 2) Loosen the screw (12) to remove the clutch plate (2) (13).
- 3) The clutch plate (1) can be taken out.

8-3. Replacement of Plunger Solenoid Ass'y (16)

- 1) Perform items 1), 2) "4-1. Replacement of Tonearm Ass'y" first.
- 2) Loosen the screw (9) to remove the friction disk (10).
- 3) Remove the clutch plate (1), (2).
(See "4-2. Replacement of Clutch Plate (1)".)
- 4) The plunger solenoid ass'y can be taken out by loosening two screws (15).

8-4. Replacement of Gear (1) (21)

- 1) Perform items 1), 2) "Replacement of Tonearm Ass'y" first.
- 2) Remove the friction disk.
(See "4-3. Replacement of Plunger Solenoid Ass'y".)
- 3) Remove the clutch plate (1), (2).
(See "4-2. Replacement of Clutch Plate (1)".)
- 4) Remove the plunger solenoid ass'y.
(See "4-3. Replacement of Plunger Solenoid Ass'y".)
- 5) Remove E type washer (17).
- 6) Remove the gear (2) (18), the plain washer (19), the dumping washer (20).
- 7) The gear (1) can be taken out.

8-5. Replacement of Gear (3) (22)

- 1) Perform items 1), 2) "4-1. Replacement of Tonearm Ass'y" first.
- 2) Remove the plunger solenoid ass'y.
(See 4-3. Replacement of Plunger Solenoid Ass'y".)
- 3) Remove the clutch plate (1), (2).
(See 4-3. Replacement of Clutch Plate (1)".)
- 4) Remove the gear (1).
(See "4-4. Replacement of Gear (1)".)
- 5) Remove E type washer (35).
- 6) The gear (3) can be taken out by removing the friction pulley (25), the spring (23).

8-6. Replacement of Lifter Cam Ass'y (32)

- 1) Perform items 1), 2) "Replacement of Tonearm Ass'y" first.
- 2) Remove E type washer (29).
- 3) Remove the lifter guide (30).
- 4) Remove E type washer (31).
- 5) The lifter cam ass'y can be taken out.

8-7. Note on Parts Replacement

- 1) Refer to Fig. 3-1 (A), (B), and 3-5, when installing screen plate and TA drum.
- 2) When installing the clutch plate (1), fit notch face of the clutch plate (1) to the gear (2).
- 3) When replacing friction pulleys, insert (2) pulleys to gear (3) to face their smoothed surface each other.
- 4) When replacing photo-transistors on the photo-sensor ass'y, attach the photo-transistor so as to meet the center of photo-transistor to the slit of photo-sensor ass'y.
- 5) When installing the plunger solenoid ass'y and the clutch plate (2), adjust the gap of the plunger solenoid so as to be 1.1 mm. (Refer to Fig. 3-5)

* Before replacing a part of the mechanism ass'y, clean it up by the alcohol, especially in friction face.

9. PACKING LIST

Parts No.	Stock No.	Description
1	13040300	Protector Board, upper
2	70122210	Dust Cover Ass'y
3	91122500	Polyethylene Bag, dust cover
4	13035800	Protector Board, platter
5	13036400	Rubber Mat
6	13040000	Turntable Platter
7	91166000	Polyethylene Bag, turntable
8	91122710	Polyethylene Bag, turntable unit
9	13057500	Styrofoam Packing, front
10	13057600	Styrofoam Packing, rear
11	13040200	Accessory Box
12	13049200	Carton Case

10. ACCESSORY LIST

Parts No.	Stock No.	Description
	13074600	Sub Weight Ass'y
	13012300	EP Adaptor
	13043100	Head Shell
	43103700	Cartridge Ass'y, SC-50
	49402300	Stylus, SN-50
*	13010800	Cartridge Ass'y, SV-101
	13010900	Stylus, SN-101
	13073600	Cartridge Ass'y, SV-202
	13073800	Stylus, SN-202
	13044600	Auto Hinge, dust cover
	07643400	Operating Instruction

*** Note :**

There are two types of units in FR-D45.

1) The unit with a cartridge (SC-50, SV-101 or SV-202).

2) The unit without a cartridge.

The mark (E) is stamped on the side of carton case.

- In particular area, either type of these unit is sold.
