## 1. OPERATIONS

### Pop-noise preventive circuit

In order to prevent the annoying pop-noise to the loudspeakers at turning the power of the amplifier ON, the pop-noise preventive circuit adopted in the G-4500/401 is the combination of the conventional driver-voltage delay type used in the power supply (rectifier) circuit and the NF delay type pop-noise preventive circuits. The configuration of NF delay type pop-noise preventive circuit is shown in Fig. 1.

In this circuit, the switching (ON-OFF) of the transistor TR05 is made by the time constant of the capacitor C40 and resistor R88. Thereby the NF resistor, R51 is controlled, and the gain of the main amplifier stage is lowered when TR05 is ON, thus the voltage drift (transient voltage) of the main amplifier at turning the power ON does not appear on the speaker terminals for very short period of time. In other words, at the instant that the power is turned ON, the voltage at the point A rises up to +13V, then the voltage decreases by means of the time constant of C40 and R88 as shown in Fig. 2. At this time, the diode D11 is inversely biased, consequently, the potential voltage of the point B is 0V as Fig. 3. Because of this, TR05 turns to the cut-off, thus the NF resistor, R51 acquires such a state as its resistance value becomes equivalently very large, which decreases the gain of the power amplifier. When the charge of the C40 is completed, the voltage of the point B (see Fig. 3) becomes negative, as a result, the diode D11 is biased. Therefore, TR05 is turned ON, and the circuit of this equipment is normally operated approximately 2 seconds after the power is turned ON to prevent the pop-noise which flows to loudspeakers.

### \* NEW MEASUREMENT FOR FM

Input signal level under the provision of IHFM-T-200, a new measurement method is indicated by available power ratio "dBf". To obtain approximate available power ratio "dBf", abstract 0.8 from attenuator indication of general FMSG (open load indication type); however, the conventional measurement, IHFM-T-100 is designated together too.

The way of modulation on IHFM-T-200 is shown below.

	modulation frequency	modulation mode	modulation factor
FM MONO	1000 Hz		100%
FM STEREO	1000 Hz	SUB	Pilot 9% Pilot + SUB 100%

\* The relation between the standard input 65 dBf of IHFM-T-200 and the former indication "dB" is shown below.

**NOTE:**

◆ **Changing Power Supply Voltage: (This is applicable for universal type).**

Your unit is adjusted to operate at the correct power supply voltage of your area prior to shipment from our factory. If you move to an outside country after purchasing it or send it as a gift to a friend living in an area where the voltage is different, it may be necessary to operate at the correct power supply voltage.

\* When necessary, remove the bonnet from the unit and reconnect leads from power supply circuit board as described below in accordance with the required voltage (100 V, 120 V, 220 V or 240 V).

1) For 100V

2) For 120V

3) For 220V

4) For 240V

## 5. PARTS REPLACEMENT

### 5-1. Square Knobs of Loudness, FM Muting, Mode & Tape Monitor

1. Take off a wood bonnet, front & inside panels.
2. Then, pull out knobs to which are not glued as Fig. 1.

### 5-2. Tuning & Signal Meter

1. Complete 1. & 2. above.
2. Take off the meter as Fig. 2, then put it back into same place until snapped.

### 5-3. Master Volume

1. Take off the two panels and one nut for master volume.
2. Then, unsolder six points installing the master volume on pattern side of F-2711 printed board.

## 8. THREADING OF DIAL CORD

- \* If a dial cord is cut off or slips, replace it by following procedures.  
As this unit uses 0.5 mmφ cord, please replace it with the same type certainly.
- \* The length of dial cord is approximately 160 cm (65.3 inch).

### 8-1. Threading of Dial Cord

Thread the dial cord in numerical order from 1 to 14 as Fig. 1.

- \* Close the variable capacitor completely (Maximum Capacitance).

Stock No.	Description
6036050	Dial Cord (0.5 mmφ)
6146670	Dial Pulley

### 8-2. Attachment of Dial Pointer

- 1) Close the variable capacitor completely.
- 2) Set the dial pointer to start point on dial scale as Fig. 2.

- \* Confirm that the dial pointer runs smoothly on the dial scale by turning the turning shaft.
