● NEW MEASUREMENT FOR FM.

Input signal level under the provision of IHFM-T-200, a new measurement method is indicated by available power ratio "dBf". To obtain approximate available power ratio "dBf", abstract 0.8 from attenuator indication of general FMSG (open load indication type); however, the former measurement, IHFM-T-100 is designated together too.

The way of modulation of IHFM-T-200 is shown below.

	modulation frequency	modulation mode	modulation factor
FM MONO	1000 Hz		100%
FM STEREO	1000 Hz	SUB	Pilot 9% Pilot + SUB 100%

- The relation between the standard input 65 dBf of IHFM-T-200 and the former indication "dB" is shown below.

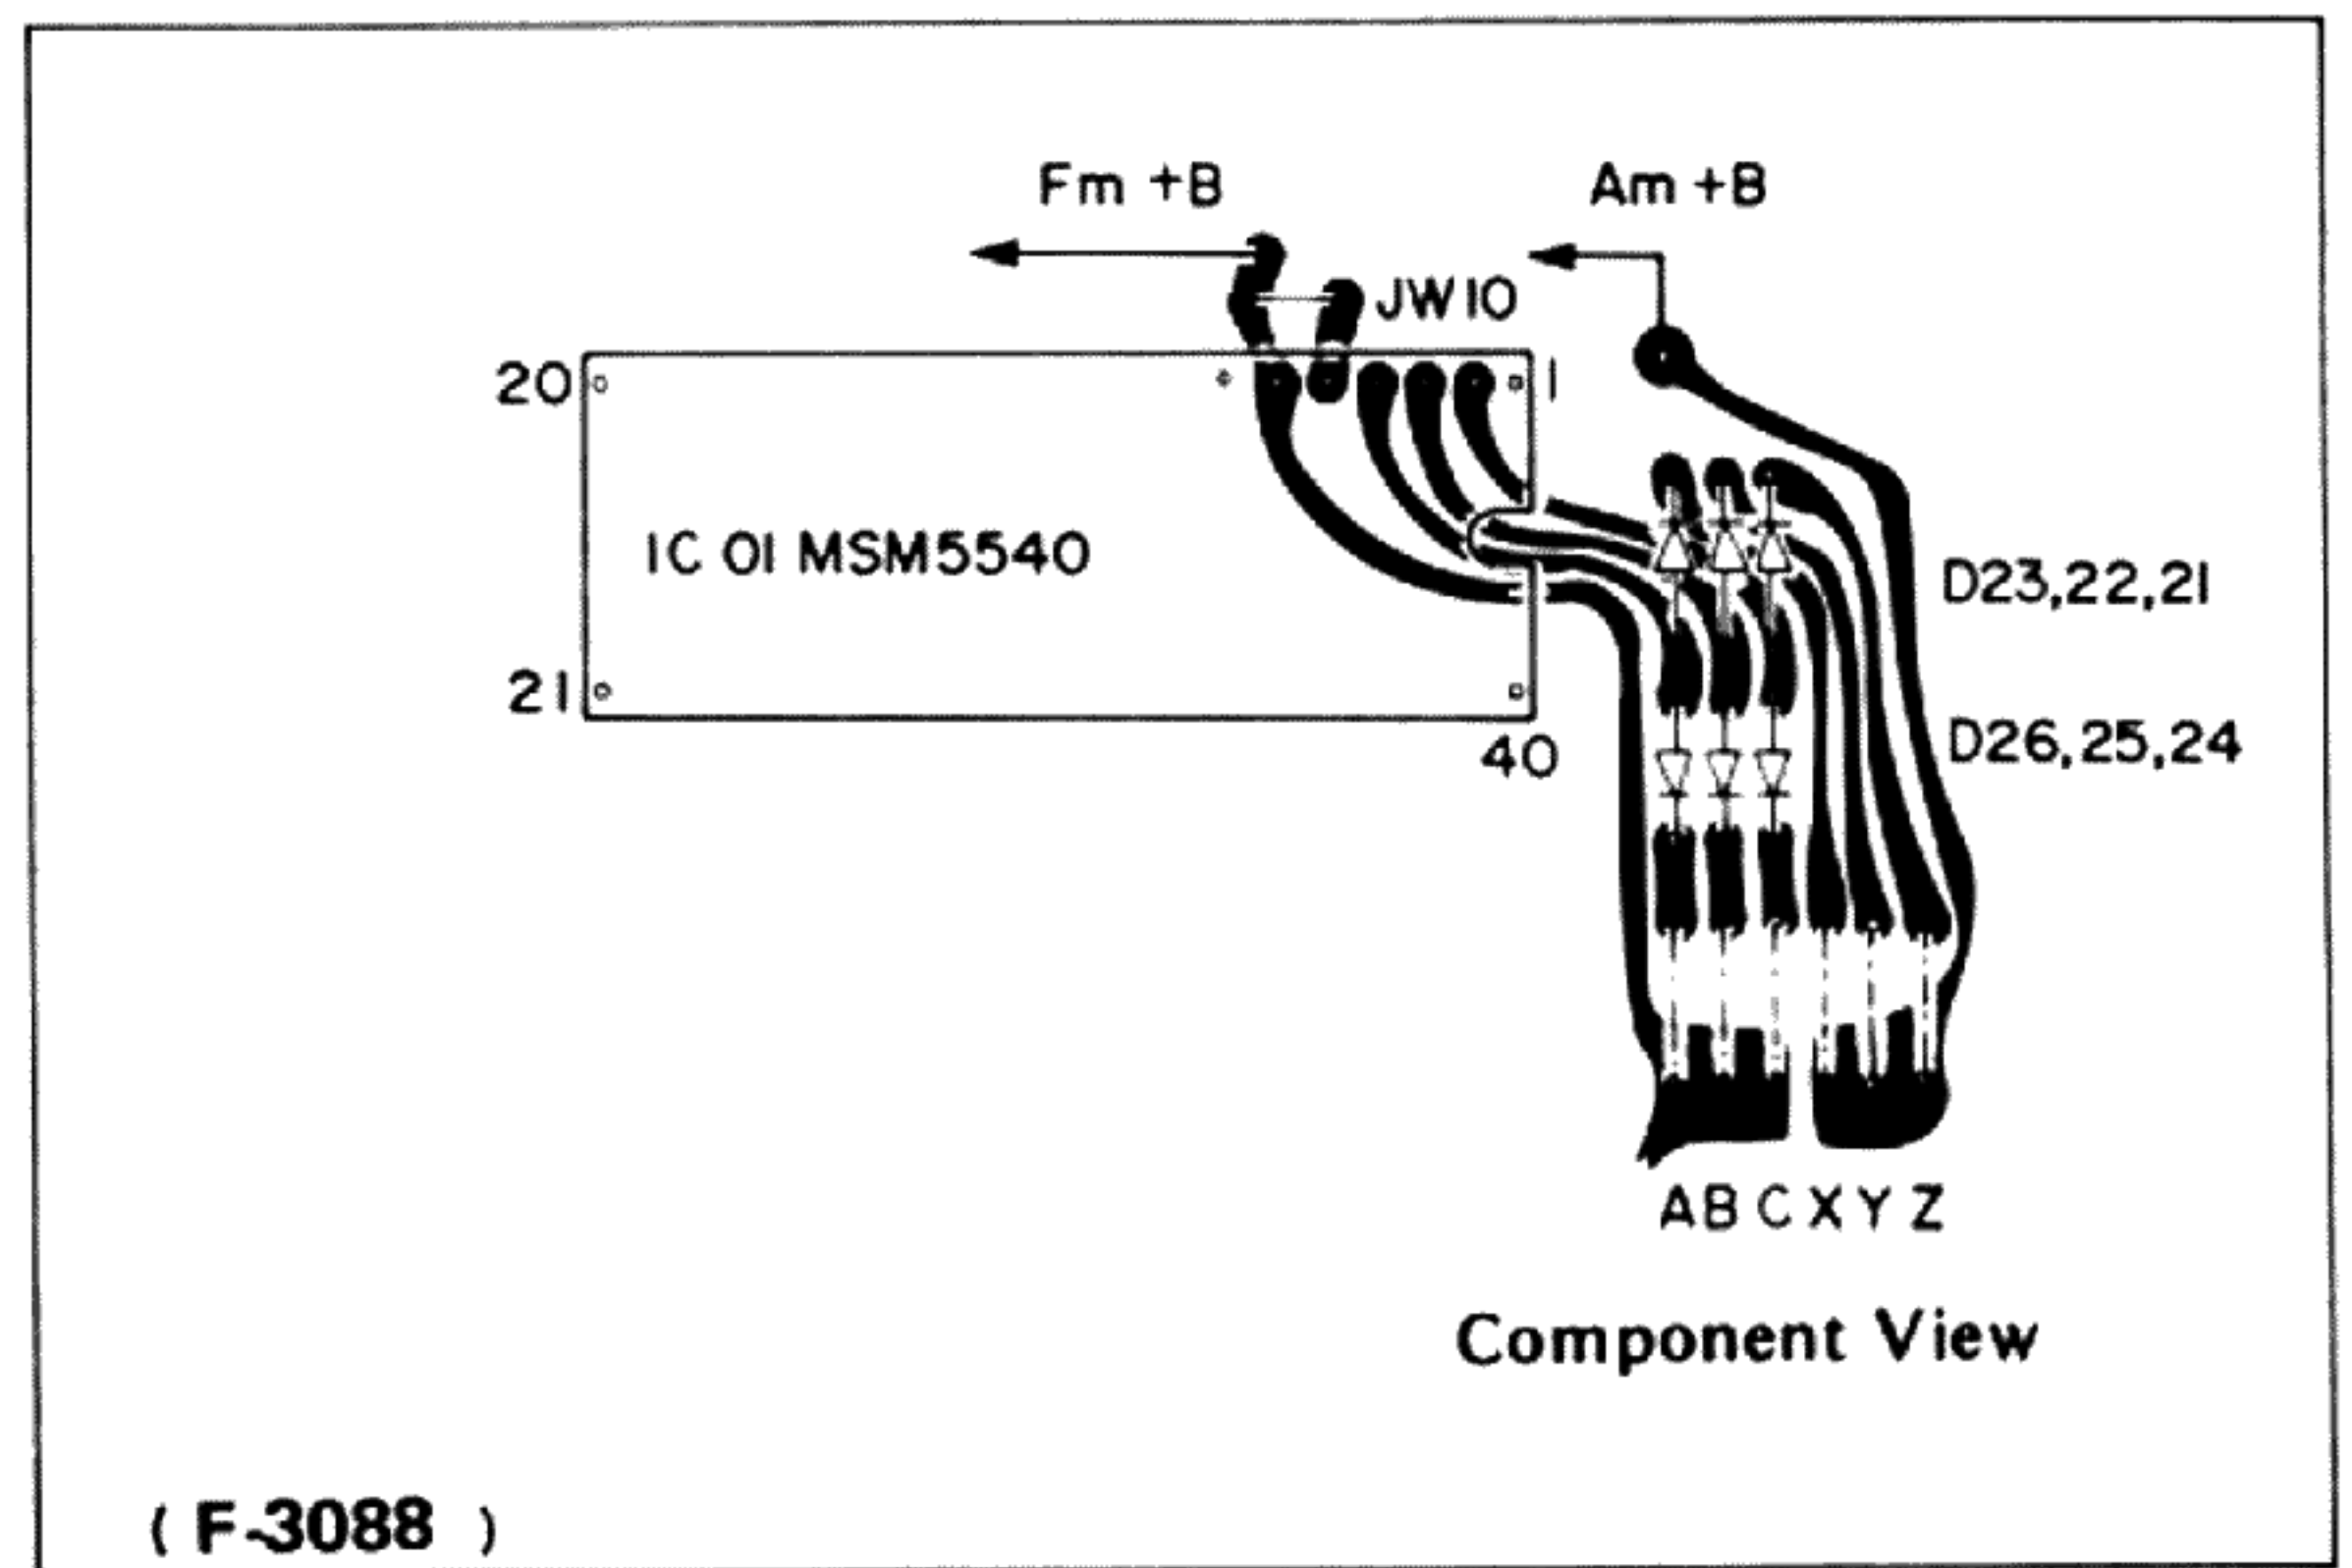

● Selection of Intermediate Frequencies (FM) (Refer to parts location F-3088 on page 9)

The digital locking point differs with the frequency rank of the ceramic filter used in the F-2990. When the central frequency (shown by a color) of the ceramic filter is changed, the following connection must be made by using jumper wires:

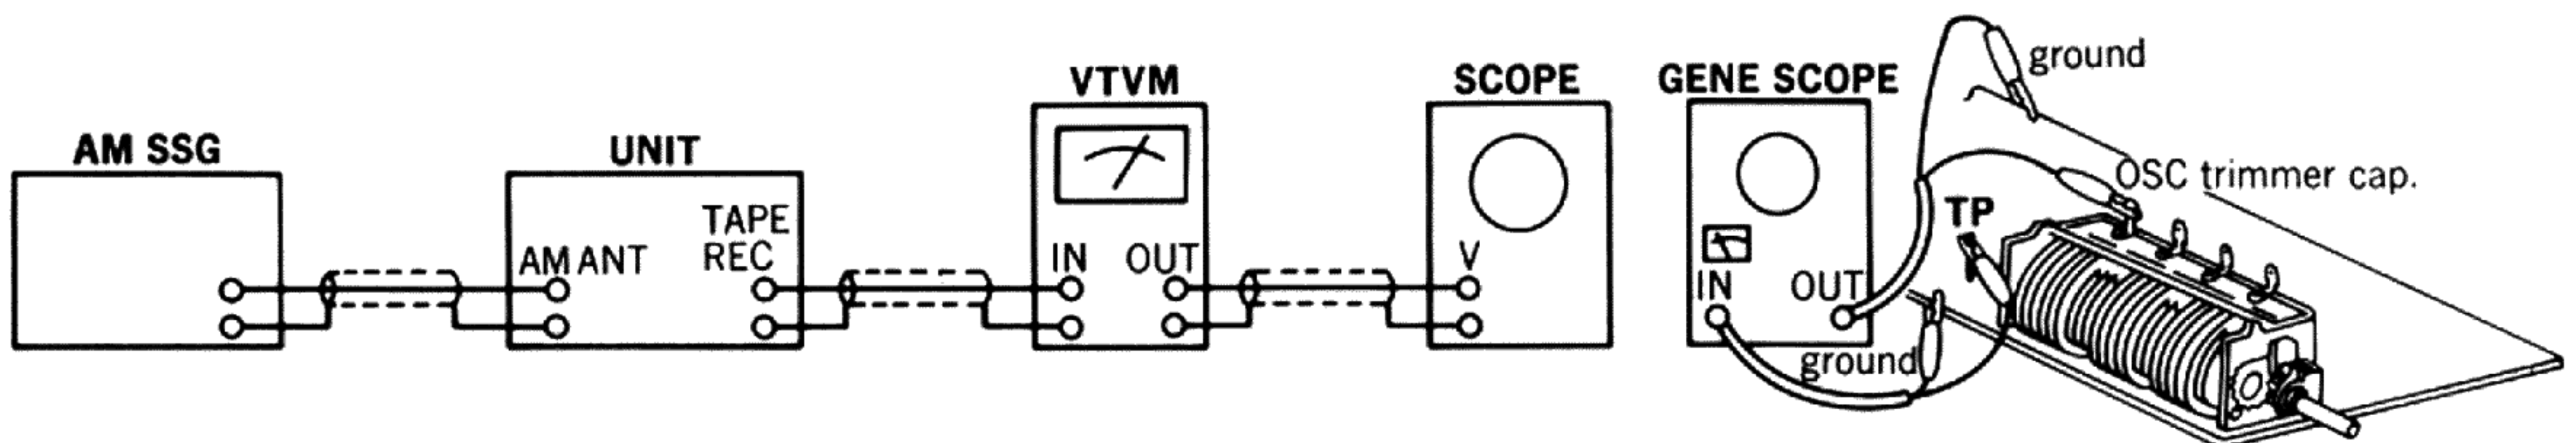

- Unify the color marks of the FM ceramic filters (CF01 ~ CF05) on the F-2990 with the same color.
- Select the joints A, B, and C of F-3088 according to color marks as shown in the following table:

Colouring	Intermediate frequency	Connecting Position of Jumper wire on F-3088				Connecting Position of Diode on F-3088

6. THREADING OF DIAL CORD

- If a dial cord is cut off or slips, replace it by following procedures. As this unit uses 0.5 mm ϕ cord, please replace it with the same type certainly.
- The length of dial cord is approximately 200 cm (78.7 inch).

1. Threading of Dial Cord

Thread the dial cord in numerical order from ① to ⑬ as Fig. 1.

- Open the variable capacitor completely.

* Dial Cord (0.5 mm ϕ) (Stock No. 6036050)

2. Attachment of Dial Pointer

1. After installing the dial string, turn on the power switch. If the digital display is in the "FM Reception" state, turn the tuning knob until the digital display indicates 98.0 MHz. Then, fix the pointer to the dial string, after setting the pointer to the 98.0 MHz value of the scale.
2. After attaching Dial pointer, confirm Dial pointer moves from 88 MHz to 108 MHz to turn the tuning knob.

7. MAIN PARTS REPLACEMENT

7-1. Master Volume Replacement

- 1) Puck out, the volume knob.
- 2) Loosen the nut fastning the volume to chassis.
- 3) Take off the volume from F-3081, Circuit Board to remove solder.

7-2. Power Transistor Replacement

- 1) Take off the radiation fin to loosen 8 fixing screws on the rear panel.
- 2) Loosen 2 screws fixing a power transistor to heat sink.

7-3. Front Panel Replacement

- 1) Remove bonnet and bottom plate.
- 2) Loosen 2 flat countersunk head screws fixing the front panel.
- 3) Loosen 3 nuts fixing the front panel after pluck out every knob except push knobs.

7-4. Replacement of LED Indication Circuit Board for Selector, Speaker, Stereo and Quartz Lock

- 1) Remove the front panel following to procedures above.
- 2) Lift up the tuning mechanism slightly to remove 6 screws A (Shown in Page 13 & 14, Top View)
- 3) Remove 2 T-rivets fixing LED Indication Circuit Board.
