## COMPACT DISC PLAYER

# SONY®

Laser component in this product is capable of emitting radiation exceeding the limit for Class 1.

This appliance is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT MARKING is located on the rear exterior.

The following caution label is located inside of the unit.

**CAUTION**  
Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

**Notes on chip component replacement**

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

**Flexible Circuit Board Repairing**

- Keep the temperature of soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

**SAFETY-RELATED COMPONENT WARNING !!**

COMPONENTS IDENTIFIED BY MARK  $\Delta$  OR DOTTED LINE WITH MARK  $\Delta$  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

**ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!!**

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE  $\Delta$  SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

**SAFETY CHECK-OUT**

After correcting the original service problem, perform the following safety checks before releasing the set to the customer: Check the antenna terminals, metal trim, “metallized” knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

**LEAKAGE**

The AC leakage from any exposed metal part to earth Ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers’ instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The “limit” indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

**NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT**

The laser diode in the optical pick-up block may suffer electrostatic break-down because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body. During repair, pay attention to electrostatic break-down and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

**NOTES ON LASER DIODE EMISSION CHECK**

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

The emission check enables continuous checking of the S curve.

**LASER DIODE AND FOCUS SEARCH OPERATION CHECK**

Carry out the “S curve check” in “CD section adjustment” and check that the S curve waveform is output three times.

## CD-TEXT TEST DISC

This unit is able to display the TEXT data (character information) written in the CD on its fluorescent indicator tube. The CD-TEXT TEST DISC (TGCS-313:J-2501-126-A) is used for checking the display. To check, perform the following procedure.

### Checking Method:

1. Turn ON the power, set the disc on the disc table with the side labeled as "test disc" as the right side, close the front cover, and chuck the disc.
2. The following will be displayed on the fluorescent indicator tube. (The display switches each time the **TIME/TEXT** button is pressed.)  
Display : Main Artist Test or CD TEXT TEST DISC (Album Title)
3. Press the **▶** button and play back the disc.
4. The following will be displayed on the fluorescent indicator tube. (If nothing is displayed, press the **TIME/TEXT** button.)  
Display : 1kHz/0 dB/ L&R
5. Rotate **◀▶** and **▶▶** buttons to switch the track. The text data of each track will be displayed.

#### 4-4. AGING MODE

##### Aging Mode

- Mode which repeatedly changes and plays back discs automatically in the unit.
  - It will repeat aging as long as no errors occur.
  - If an error occurs during aging, it will stop all servos, motors, etc. instantaneously, display the error number, and stop operations. However, the stopping conditions differ according to whether the unit is equipped with the “self-protection function during errors” described later.
- The function serves to maintain the state of the unit when errors occur.

##### Sequence of Aging Mode

##### Order of Disc Change

(1 cycle takes 3 minutes)

##### Special Aging Mode Functions

The aging mode is provided with the following convenient functions

- Disc setting mode (\*1)
- Selection of presence of protection function during error (\*2)
- Count function of aging cycle (\*3)

##### \*1 Disc setting mode:

5 discs are set before setting the aging mode. This mode makes the setting of these discs more easy.

##### \*2 Self protection function during errors:

Function which voluntarily corrects errors which occur during normal operations by retries.

If this function is not provided, all operations will be stopped without retiring. It is suitable for checking errors with low reproducibility.

If this function is provided, and errors can be corrected by retries, aging will be continued without stopping.

##### \*3 Aging cycle count function:

Functions which displays the number of agings carried out on the Fluorescent indicator tube in numbers. One aging cycle consists of five discs.

### Aging Method

1. Turn ON the power of the unit. Press the **OPEN/CLOSE** and open the front cover.
2. Change the **COMMAND MODE** switch (S901) on set to **CD1**.
3. Press the **AGING START** button of the remote commander for aging mode (J-2501-123-A).
4. When the disc set mode is set, the **▶** and **■** LEDs blink.
5. Rotate the **DISC/CHARACTER** dial. The slits (No. 40, 80, 120, 160, 200) for setting the discs will come forward. Insert the discs into these slits. Do not set the discs in other slits.
6. Set whether the self-protection function during errors is equipped with the unit. Press the **REPEAT** button. If "REPEAT" is displayed on the Fluorescent indicator tube, it means the function is provided. If "REPEAT" is not displayed, it means the function is not provided.
7. Press the **▶** button.
8. The **▶** LED blinks, the aging mode is set, and aging is started.
9. The aging cycle lasts 3 minutes. If errors occur during aging, the error number will be displayed on the Fluorescent indicator tube. (Refer to the following table for the details of the errors.)
10. Aging will be repeated as long as no errors occur.
11. After each aging cycle, the number displayed on the Fluorescent indicator tube will increase.
12. To end aging, press the **I/⏻** button.

## SECTION 5 ADJUSTMENTS

### 5-1. MECHANICAL ADJUSTMENT

Perform the following steps before carrying out adjustments.

1. Turn ON the power of the unit, set disc to disc table No. 92, and perform chucking.
2. Turn OFF the power.
3. Remove the case.
4. While pressing the **STOP** button, turn ON the **I/O** button. The test mode is set.
5. The POWER button LED starts blinking. (Test mode)

**NOTE 1:** The cam will start rotating when the GROUP 1 or GROUP 5 button is pressed continuously in the test mode.

**NOTE 2:** If the power cannot be supplied, the cam can be rotated by rotating the pulley with your finger.

**GUIDE (DISC T) ALIGNMENT**

## HOLDER (DISC A) ALIGNMENT

## SENSOR ALIGNMENT

Perform this adjustment after the "holder (disc A) adjustment".  
If the disc table swings to the left and right just before the disc is chucked, perform the following adjustment.

### CAUTION:

The LED may not light up in steps (3) and (4) for some microprocessor versions, and consequently adjustments will not be possible.

In this case, fix the bracket (sensor) at the mechanical center.  
As fine adjustments need to be performed in "Disc Sensor Adjustment" in Electrical Adjustments, sensor alignment need not be performed here.

## PULLY AND DISC CENTER HOLE ALIGNMENT

(2) Check that the state is as shown in the figure.

Loosen the fixed screw by  $60^\circ$  to  $90^\circ$ , and move and adjust the bracket (BU adjustment) up and down using a tapering screwdriver so that the positions of the disc hole and disc pulley become  $A=B$  or between  $A:B=2.1$  and  $1.2$ .

## 5-2. ELECTRICAL BLOCK ADJUSTMENT

### Note:

1. CD Block is basically designed to operate without adjustment. Therefore, check each item in order given.
2. Use YEDS-18 disc (3-702-101-01) unless otherwise indicated.
3. Use an oscilloscope with more than 10MΩ impedance.
4. Clean the object lens by an applicator with neutral detergent when the signal level is low than specified value with the following checks.

### S-Curve Check

### Procedure :

1. Chuck the disc (YEDS-18) beforehand, and disconnect the power cord from the outlet.
2. Connect oscilloscope to test point TP (FE1) on BD board.
3. Connect test point TP1 (ADJ) on MAIN board to ground with lead wire.
4. The ADJ mode is set when the power cord is inserted into the outlet and power is supplied.
5. The fifth track is played automatically
6. Press the **CHECK** button.
7. Check the oscilloscope waveform (S-curve) is symmetrical between A and B. And confirm peak to peak level within  $3 \pm 1$  Vp-p.

S-curve waveform

8. Pressing the **STOP** button stops the output of the waveform (s curve).
9. After check, remove the lead wire connected in step 3.

**Note :**

- Try to measure several times to make sure than the ratio of A : B or B : A is more than 10 : 7.
- Take sweep time as long as possible and light up the brightness to obtain best waveform.

### RF Level Check

### Procedure :

1. Connect oscilloscope to test point TP (RF) on BD board.
2. Turn Power switch on.
3. Put disc (YEDS-18) in to play the number five track.
4. Confirm that oscilloscope waveform is clear and check RF signal level is correct or not.

**Note:** A clear RF signal waveform means that the shape "0" can be clearly distinguished at the center of the waveform.

RF signal waveform

### E-F Balance Check

### Procedure :

1. Chuck the disc (YEDS-18) beforehand, and disconnect the power cord from the outlet.
2. Connect oscilloscope to test point TP (TE) on BD board.
3. Connect test point TP1 (ADJ) on MAIN board to ground with lead wire.
4. The ADJ mode is set when the power cord is inserted into the outlet and power is supplied.
5. The fifth track is played automatically.
6. Press the **GROUP 3** button. (The tracking servo and the sledding servo are turned OFF.)
7. Check the level B of the oscilloscope's waveform and the A (DC voltage) of the center of the Traverse waveform. Confirm the following :  
 $A/B \times 100 = \text{less than } \pm 22\%$

Traverse waveform

8. Press the **GROUP 8** button. (The tracking servo and sledding servo are turned ON.) Confirm the C (DC voltage) is almost equal to the A (DC voltage) is step 7.

Traverse waveform

9. Disconnect the lead wire of TP1 (ADJ) connected in step 2.

### Disc Sensor Adjustment

Perform this adjustment after completing all adjustments of the mechanism section.

If not performed accurately, the presence of the disc may not be detected properly.

#### Waveform 1:

#### Connection 2:

#### Waveform 2

### Procedure:

1. Connect the oscilloscope to Pins ①, ②, and ④ of CN506 of the MAIN board. Also connect a 1 kΩ resistor to Pin ④ at the same time. (Connection 1)
2. Check that no discs are loaded in the unit.
3. With the power OFF, press the **[I/O]** button while pressing the **[INPUT]** button, and turn on the power at the same time.
4. The rotary table will continue rotating in the clockwise direction.
5. Observe the waveform at that time on the oscilloscope.
6. Loosen the screw securing the D.SENS (LUMINOUS) board slightly.
7. Slide the D SENS (LUMINOUS) board to the left and right so that the peak of the D0 waveform is at the center between the descending point of the T1 waveform and ascending point of the T2 waveform. (Waveform 1) After adjusting, apply locking compound.

8. Disconnect the resistor connected to Pin ④ of CN506 of the MAIN board (Connection 2)
9. Observe the waveform on the oscilloscope. (Waveform 2)
10. Adjust RV501 of the MAIN board so that the waveform on the oscilloscope satisfies the following adjustment value 1.
11. Press the **[I/O]** button and turn OFF the power.
12. Press the **[I/O]** button, turn on the power, press the **[OPEN/CLOSE]** button, and open the front cover. Next rotate the **[DISC/CHARACTER]** dial in the counterclockwise direction continuously so that the rotary table rotates continuously in the counterclockwise direction.
13. Observe the waveform on the oscilloscope and confirm that it satisfies the adjustment value 2 (waveform 3). If it does not, adjust RV501 of the MAIN board.

#### Waveform 3:

14. After the adjustment, load a disc only in slit 1, and press the  button to turn off the power.
15. Press the  button while pressing the **PUSH ENTER** button to turn on the power.
16. If the rotary table makes one round, and “YES” is displayed on the fluorescent indicator tube after it stops, it means that the adjustment has been performed properly.

**Adjustment value 1:**

At the shoulder part of waveform D1, T1 becomes H and T2 becomes L, and at the same time, the Y width must not be smaller than 1/4 of the Z width.

In order to satisfy this value more easily, adjust so that X=Y approximately and observe the deviation of the waveform.

**Adjustment value 2:**

At the shoulder part of waveform D1, T1 becomes L and T2 becomes H, and at the same time, the Y width must not be smaller than 1/4 of the Z width.

**Note:**

The components identified by mark  $\Delta$  or dotted line with mark  $\Delta$  are critical for safety  
Replace only with part number specified

Les composants identifiés par une marque  $\Delta$  sont critiques pour la sécurité  
Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set
- -XX, -X mean standardized parts, so they may have some difference from the original one
- Items marked "\*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items
- RESISTORS  
All resistors are in ohms  
METAL: Metal-film resistor  
METAL OXIDE: Metal Oxide-film resistor  
F: nonflammable
- SEMICONDUCTORS  
In each case,  $\mu$  =  $\mu$ , for example:  
uA.  $\mu$  A., uPA...  $\mu$  PA., uPB :  $\mu$  PB.,  
uPC :  $\mu$  PC..., uPD... :  $\mu$  PD.
- CAPACITORS  
uF :  $\mu$  F
- COILS  
uH  $\mu$  H
- Abbreviation
