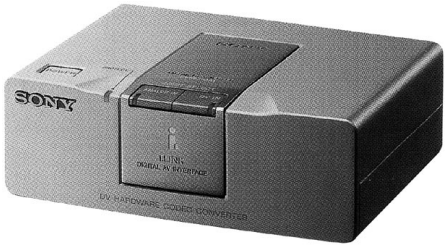
Canadian Model



SPECIFICATIONS

Power requirements
DC IN 6V jack accepts the AC-MZ60A AC power adapter (supplied), AC 120 V, 60 Hz
Power consumption
AC 120 V, 60 Hz, 5.1 W (max., AC power adapter)
Operating temperature
10°C to 35°C (50°F to 95°F)
Operating humidity
40 % to 80 %
Storage temperature
–20°C to 80°C (–4°F to 176°F)
Storage humidity
20 % to 80 %
Dimensions (approx.)
124 × 44 × 90.5 mm (5 × 1 3/4 × 3 5/8 inches) (w / h / d, excluding projections)
Mass (approx.)
300 g (10 oz) (unit only)

Input / output connector
S-VIDEO IN: Mini DIN 4-pin (1)
S-VIDEO OUT: Mini DIN 4-pin (1)
VIDEO IN: RCA pin (1)
VIDEO OUT: RCA pin (1)
AUDIO IN: RCA pin (2): L, R
AUDIO OUT: RCA pin (2): L, R
DV IN / OUT: S100 (100 Mbps) 4-pin (1)
Supplied accessories
AC power adapter (AC-MZ60A)
DV connecting cable
Audio / video connecting cable

TABLE OF CONTENTS

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK ⚠ OR DOTTED LINE WITH MARK ⚠ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

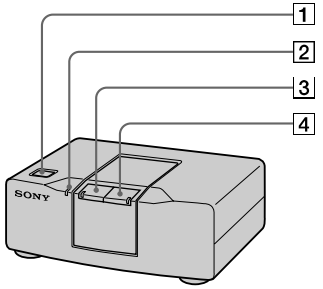
ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFÉS PAR UNE MARQUE ⚠ SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈSES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPÉMENTS PUBLIÉS PAR SONY.

Table of contents

Locating the parts and controls

Front



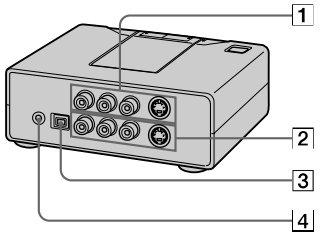
1 POWER button
Turns on / off the media converter.

2 PROTECT indicator
Lights when the input picture includes a copy protection signal.
You cannot record the signal when this indicator is lit.

3 ANALOG IN key and indicator
Select the signal input from the AUDIO / VIDEO / S-VIDEO IN as the input signal to the media converter.

4 DV IN key and indicator
Select the signal input from the DV IN / OUT as the input signal to the media converter.

Rear



1 AUDIO/VIDEO/S-VIDEO IN connectors
Connect to the analog video unit.
When you connect both the S-VIDEO IN and VIDEO IN connectors, the S-video signal is automatically selected.

When connecting to VIDEO IN connectors only, no signals are output from the S-VIDEO OUT connector.

2 AUDIO/VIDEO/S-VIDEO OUT connectors
Connect to the analog video unit or TV.

3 DV IN/OUT connector
Connect to the DV unit.

4 DC IN 6V connector
Connect to the supplied AC power adapter.

SECTION 1
GENERAL

DVMC-DA1

This section is extracted from instruction manual (3-864-717-11).

Overview

The DVMC-DA1 is a media converter unit which converts analog video signals to digital video signals and vice versa.

Converting pictures and sound from 8 mm/VHS format to DV format and vice versa (pages 8 - 10)

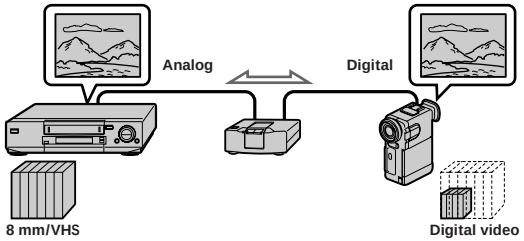
You can convert analog video on Hi8, 8 mm, or VHS format cassettes to digital video (DV) by connecting both analog and digital video units via the media converter. MPEG data cannot be converted as a digital signal.

Since pictures and sound are recorded on the DV unit in digital format, little or no picture and sound quality are lost.

You can also convert digital video to analog video.

Note

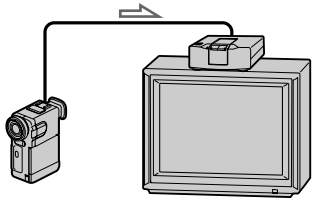
You cannot record video which includes copyright protection signals.



Viewing pictures from the DV unit (page 11, 12)

You can enjoy high quality digital video when you connect a DV unit to a TV via the media converter using the DV connecting cable.

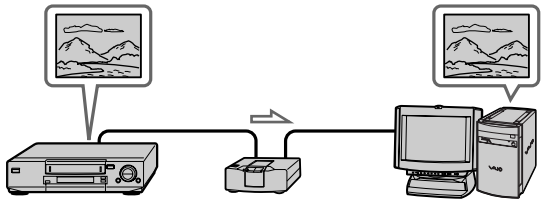
In this case, you do not have to change the connection between your TV and the other analog video unit.



Capturing images from an analog video unit using a PC (page 13, 14)

You can capture images from an analog video unit connected to your PC via the media converter using the DV (i.Link) connector.

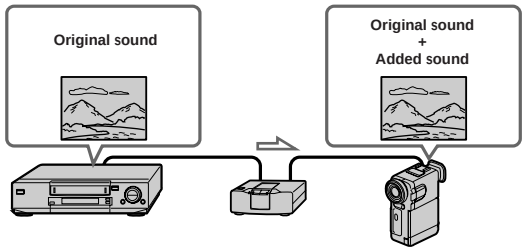
In this case, you can edit a movie or add titles using your PC. You can also print out the captured images using your PC printer instead of a video printer.



Selecting the audio mode when recording to the DV unit (page 9)

You can add messages or background music after recording.

When you record to the DV unit from an analog video unit, you can select 16-bit audio mode for higher quality, or 12-bit audio mode for adding messages or background music (post sound recording).



Listening to the audio with the desired mixing rate (page 12)

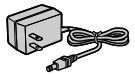
When playing back video recorded in 12-bit audio mode on a DV unit via the media converter, you can listen to: the recorded message and / or background music only (post sound recording), the original audio, or the combined audio of both tracks with the desired mixing rate (5 steps).

Checking the supplied parts and accessories

Check to make sure you have received the following items in the carton.

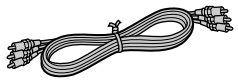
If something is missing, contact your Sony dealer or service facility.

AC power adapter (AC-MZ60A)



DV connecting cable

Audio/video connecting cable



S-video connecting cable

Operating instructions

Owner registration card

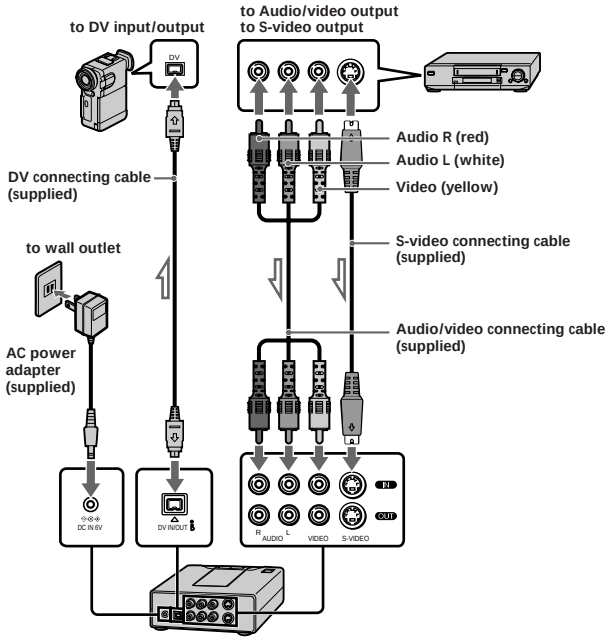
Important safe guard

Duplicating analog video to digital video

Connecting an analog video unit and a DV unit via the media converter



If you want to convert digital video to analog video

Make the connection as follows:

- Connect the DV output connector of the DV unit to the DV IN / OUT connector of the media converter using the supplied DV connecting cable.
- Connect the input connectors of the analog video unit to the AUDIO / VIDEO OUT connectors of the media converter using the supplied audio / video connecting cable.

Duplicating analog video to digital video

You can convert and record pictures and sound from an analog video unit to a DV unit by connecting both units via the media converter.

1 Press POWER to turn on the media converter.

2 Press ANALOG IN.

The key indicator lights up.

3 Select the audio mode.

Each time you press and hold ANALOG IN for a few seconds, the audio mode changes as follows.
16-bit mode (high quality sound): The key indicator lights up in red.
12-bit mode (post sound recording): The key indicator lights up in green.

4 Pause playback on the analog video unit slightly ahead of the point from which you want to start recording.

5 Pause recording on the DV unit at the point from which you want to start recording.

6 Start playback on the analog video unit, then start recording on the DV unit.

The picture and sound played back on the analog video unit are recorded on the DV unit.

Note

Depending on the condition of the analog video signal input to the media converter, some DV units may not output the analog video signal correctly when the digital video signal is output from the media converter. The video recorded on the DV unit is not affected. When previewing a recorded VIDEO ,we recommend connecting the input connector of the TV to the VIDEO OUT or S-VIDEO OUT of the media converter.

continued

Duplicating digital video to analog video

You can convert and record pictures and sound from a DV unit to an analog video unit by connecting both units via the media converter.

1 Press POWER to turn on the media converter.

2 Press DV IN.

The key indicator lights up.

3 Pause playback on the DV unit slightly ahead of the point from which you want to start recording.

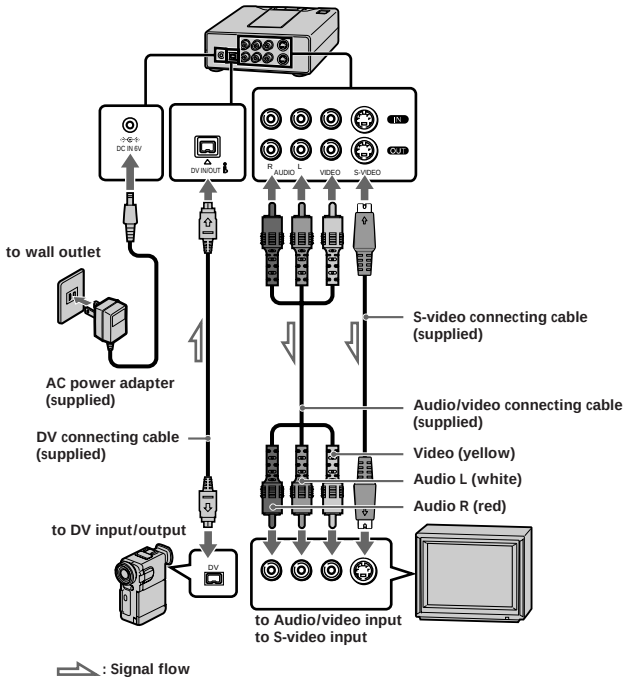
4 Pause recording on the analog video unit at the point from which you want to start recording.

5 Start playback on the DV unit, then start recording on the analog video unit.

The picture and sound played back on the DV unit are recorded on the analog video unit.

Viewing digital video on your TV

Connecting a DV unit and a TV via the media converter



continued

Tip

When connecting the TV corresponding to the ID-1 system, the TV automatically turns to wide mode.

Viewing digital video on your TV

You can enjoy high quality digital video when you connect the DV unit to the TV via the media converter.

1 Press POWER to turn on the media converter.

2 Press DV IN.

The key indicator lights up.

3 Start playback on the DV unit.

Pictures played back on the DV unit appear on the TV screen.

Playing back the audio while changing the mixing rate

When playing back video recorded in 12-bit audio mode on a DV unit via the media converter, you can listen to: the recorded message and/or background music only (post sound recording), the original audio, or the combined audio of both tracks with the desired mixing rate (5 steps).

Press and while holding DV IN, press ANALOG IN.

Each time you press ANALOG IN, the mixing rate changes as follows:

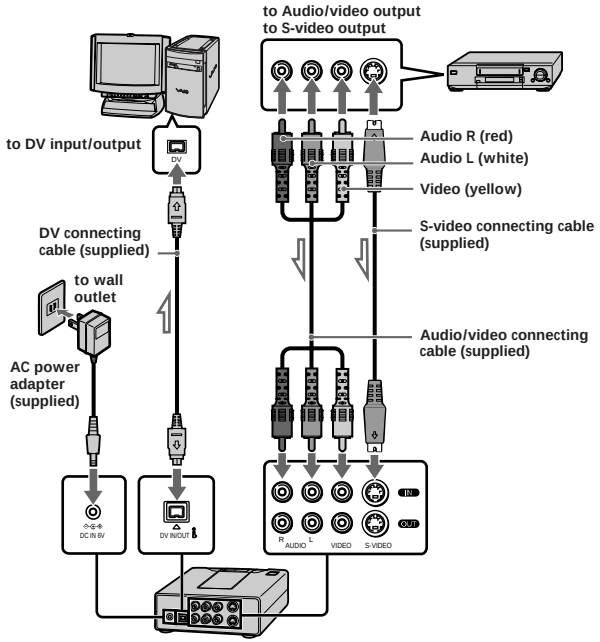
Original audio	Added audio
100%	0%
75%	25%
50%	50%
25%	75%
0%	100%

Note

When the power on the media converter is turned off, the mixing rate is reset to the default setting (original audio: 100%, added audio: 0%).

Capturing images from an analog video unit using a PC

Connecting a PC and an analog video unit via the media converter



continued

Tip

The DV still image capture card kit DVBK-CW200 for PC / AT compatible or DV still image capture board kit DVBK-W2000 for PC / AT compatible / DVBK-M2000 for Macintosh (not supplied) can be used. For details, refer to the operating instructions of DV still image capture card kit or DV still image capture board kit.

If you want to convert digital video to analog video

Make the connection as follows:

- Connect the DV output connector of the PC to the DV IN / OUT connector of the media converter using the supplied DV connecting cable.
- Connect the input connectors of the analog video unit to the AUDIO / VIDEO OUT connectors of the media converter using the supplied audio / video connecting cable.

Capturing images from an analog video unit using a PC

You can capture the images from an analog video unit using a PC which is connected via the media converter.

1 Press POWER to turn on the media converter.

2 Press ANALOG IN.

The key indicator lights up.

3 Start playback on the analog video unit slightly ahead of the point from which you want to start capturing images.

4 Start capturing procedures on your PC.

The operation procedures depend on your PC and the software which you use.

For details on how to capture images, refer to the instruction manual of your PC and software.

Recording analog video from a PC

1 Press POWER to turn on the media converter.

2 Press DV IN.

The key indicator lights up.

3 Start recording on the analog video unit.

4 Start outputting procedures on your PC.

The operation procedures depend on your PC and the software which you use.

For details on how to output images, refer to the instruction manual of your PC and software.

Precautions

Use

- Operate the product only with the supplied AC power adapter. If you use a different AC power adapter, it may cause a malfunction.

Unified polarity plug

- Should any liquid or solid object fall into the cabinet, unplug the product and have it checked by qualified personnel before operating it further.
- Always turn the product off when you do not use it.

  Unplug the product from the wall outlet if you are not going to use it for several days or more. To disconnect the cord, pull it out by the plug. Never pull the cord itself.
- Do not overload wall outlets, extension cords, or convenience receptacles beyond their capacity, since this can result in fire or electric shock.
- Do not use attachments not recommended by the manufacturer, as they may cause hazards.
- Do not touch the AC power adapter with wet hands. If you fail to observe this, it may cause electric shock.
- Do not drop or give a mechanical shock to the product.

Installation

- To prevent internal heat build-up, do not block the ventilation openings.
- Avoid operating the product at temperatures below 5˚C (41˚F).
- Do not subject the product to high temperature or direct sunlight. If you do not observe the above instructions, the product may become deformed.
- Do not place the product in locations where it is wet, humid, dusty, smoky, or steamy. Do not use this product near or around water. It may cause fire or electric shock. Especially, do not use the product in the bathroom.
- If the product is transported directly from a cold to a warm location, or if the room temperature has changed suddenly, moisture may condense in the unit. If this happens, let the moisture evaporate before using the product.
- Do not place the product on an unstable cart, stand, table, or shelf. The product may fall, causing serious injury to a child or an adult, and serious damage to the product.
- Do not allow anything to rest on or roll over the power cord, and do not place the product where the power cord is subject to wear or abuse.

continued

Others

- Unplug the product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
  - When the power cord or plug is damaged or frayed.
  - If liquid has been spilled into the product.
  - If the product has been exposed to rain or water.
  - If the product has been subject to excessive shock by being dropped, or the cabinet has been damaged.
  - If the product does not operate normally when following the operating instructions. Adjust only those controls that are specified in the operating instructions. Improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
  - When the product exhibits a distinct change in performance — this indicates a need for service.
- Do not disassemble or remodel the product. It may cause fire or electric shock. Have the product checked and repaired at your Sony dealer or local authorized Sony service facility.
- Do not attempt to service the product yourself since opening the cabinet may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.
- When replacement parts are required, be sure the service technician certifies in writing that he has used replacement parts specified by the manufacturer that have the same characteristics as the original parts.

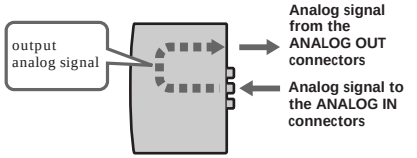
  Unauthorized substitutions may result in fire, electric shock, or other hazards.
- Upon completion of any service or repairs to the product, ask the service technician to perform routine safety checks (as specified by the manufacturer) to determine that the product is in safe operating condition, and to so certify.
- Unplug the product from the wall outlet before cleaning. Clean the product with a dry, soft cloth, or a soft cloth slightly moistened with a mild detergent solution. Do not use any type of solvent, such as alcohol or benzine.

Technical information

Signal flows

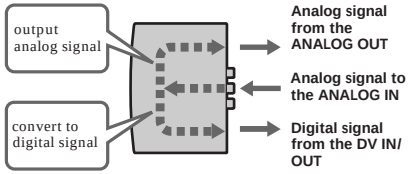
The signal flow of the media converter and the connected unit is illustrated below:

When the media converter is turned off (with the AC power adapter connected)



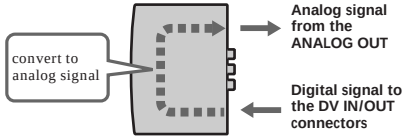
When you connect your TV to a VCR with a TV tuner, you can watch VCR pictures whenever the media converter is not turned on.

When the media converter is turned on (When inputting analog signals)



The signals are output from both the DV IN / OUT and ANALOG OUT connectors.

When the media converter is turned on (When inputting digital signal)



continued

Output/input of analog video signals

Depending on the connection of VIDEO IN or S-VIDEO connector, the output signal changes as follows.

The input signal is coming from only the VIDEO IN connector

→ The signal is output from the VIDEO OUT connector, but not from the S-VIDEO OUT connector.

The input signal is coming from only the S-VIDEO IN connector

→ The signal is output both from the VIDEO OUT and S-VIDEO OUT connectors.

The input signal is coming from both the VIDEO IN and S-VIDEO IN connectors

→ The signal is output both from the VIDEO OUT and S-VIDEO OUT connectors.

Notes

- When connecting to only the VIDEO IN connector, the signal cannot be output to the S-VIDEO OUT connector.
- When connecting both the S-VIDEO IN and VIDEO IN connectors, the S-video signal is automatically selected for converting the digital video signal regardless signal type.
- For higher quality pictures, we recommend connecting both the S-VIDEO IN and S-VIDEO OUT connectors.

Copyright precautions

On recording

When you play back video which includes copyright protection signals and playback signals are input to the media converter, the PROTECT indicator on the media converter lights up. In this case, You cannot record or capture the video output from the media converter.

ID-2 system

This copyright protection system is used for the analog connection. The ID-2 system is added to the ID-1 system.

CGMS-D system

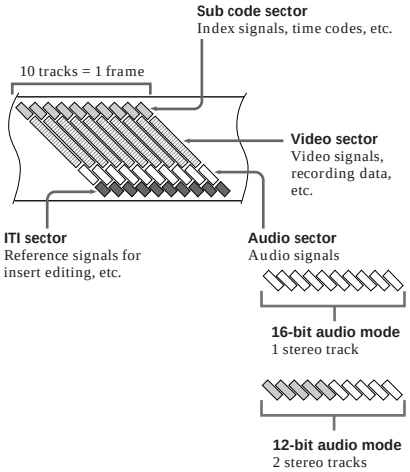
This copyright protection system is used for the digital connection.

Macrovision

This product incorporates copyright protection technology that is protected by method claims of certain U.S. patents and other intellectual property rights owned by Macrovision Corporation and other rights owners. Use of this copyright protection technology must be authorized by Macrovision Corporation, and is intended for home and other limited viewing uses only unless otherwise authorized by Macrovision Corporation. Reverse engineering of disassembly is prohibited.

DV recording format

The following figure shows how the signals are recorded on a DV tape.



continued

12-bit/16-bit audio modes

16-bit mode

The 16-bit mode uses the whole audio area to record one stereo track. You can record the original audio with high quality in this mode. This mode uses 48 kHz sampling frequencies.

12-bit mode

The 12-bit mode consists of two separate stereo tracks – Stereo 1 and 2. You can add messages or background music separately to the recorded picture in this mode. This mode uses 32 kHz sampling frequencies.

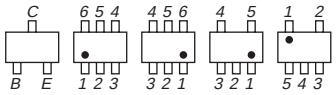
PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS

THIS NOTE IS COMMON FOR WIRING BOARDS AND SCHEMATIC DIAGRAMS
(In addition to this, the necessary note is printed in each block)

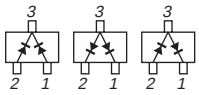
(For printed wiring boards)

- ▒▒▒: Pattern from the side which enables seeing. (The other layers' patterns are not indicated.)
- Through hole is omitted.
- Circled numbers refer to waveforms.
- There are few cases that the part printed on diagram isn't mounted in this model.
- Chip parts.

Transistor



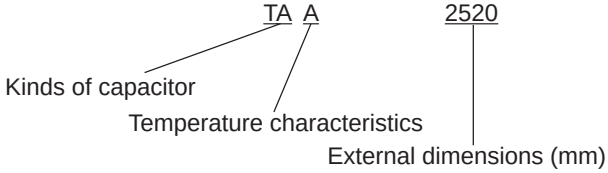
Diode



(For schematic diagrams)

- All capacitors are in μF unless otherwise noted. pF : μμF. 50V or less are not indicated except for electrolytics and tantalums.
- Chip resistors are 1/10W unless otherwise noted. kΩ=1000Ω, MΩ=1000kΩ.
- Caution when replacing chip parts. New parts must be attached after removal of chip. Be careful not to heat the minus side of tantalum capacitor, Because it is damaged by the heat.
- Some chip part will be indicated as follows.

Example C541 L452
22U 10UH
TA A 2520



- Constants of resistors, capacitors, ICs and etc with XX indicate that they are not used. In such cases, the unused circuits may be indicated.
- Parts with ★ differ according to the model/destination. Refer to the mount table for each function.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- Signal name
  XEDIT → EDIT PB/XREC → PB/$\overline{\text{REC}}$
- : non flammable resistor
- : fusible resistor
- : panel designation
- : B+ Line *
- : B– Line *
- : IN/OUT direction of (+,–) B LINE. *
- : adjustment for repair. *
- Circled numbers refer to waveforms. *

* Indicated by the color red.

SECTION 4
ADJUSTMENTS

4-1. PREPARATIONS BEFORE ADJUSTMENTS

Use the following measuring instruments for video section adjustment.

1. Equipment Required

1) TV monitor
2) Oscilloscope (dual-trace, band width of 30 MHz more with delay mode) (Unless otherwise specified, use a 10 : 1 probe.)
3) Pattern generator with video output terminal.
4) Regulated power supply
5) Adjustment remote commander (J-6082-053-B)

2. Removing Cabinets and Connections

1) Remove the four screws from the bottom panel and remove the cabinet (upper) block assembly.
2) Remove the flexible wiring board that is connected to CN701 of the IFX-52 board.
3) Remove the two screws (B3 × 10) from the rear panel and two screws (M2 × 6) securing the shield plate. Remove the cabinet (lower) assembly and the shield (upper).
4) Remove the four screws (2 × 8) securing the IFX-52 board, and remove the IFX-52 board.
5) Connect the measuring instruments as shown in Fig. 4-1.

3. Checking the Input Signals

The video signal that is supplied from the pattern generator is used as the adjustment signal of the video section. Therefore, the video output signal must satisfy the given specifications.
Connect an oscilloscope to the video terminal of the AUDIO/VIDEO jack, and check that the sync signal amplitude of the video signal is approximately 0.286V, the amplitude of the video section is approximately 0.714V, the amplitude of the burst signal is approximately 0.286V and flat, and that the “red” amplitude of the chroma signal is approximately 0.67V.
The video signal used for adjusting the video section is shown in Fig. 4-2.

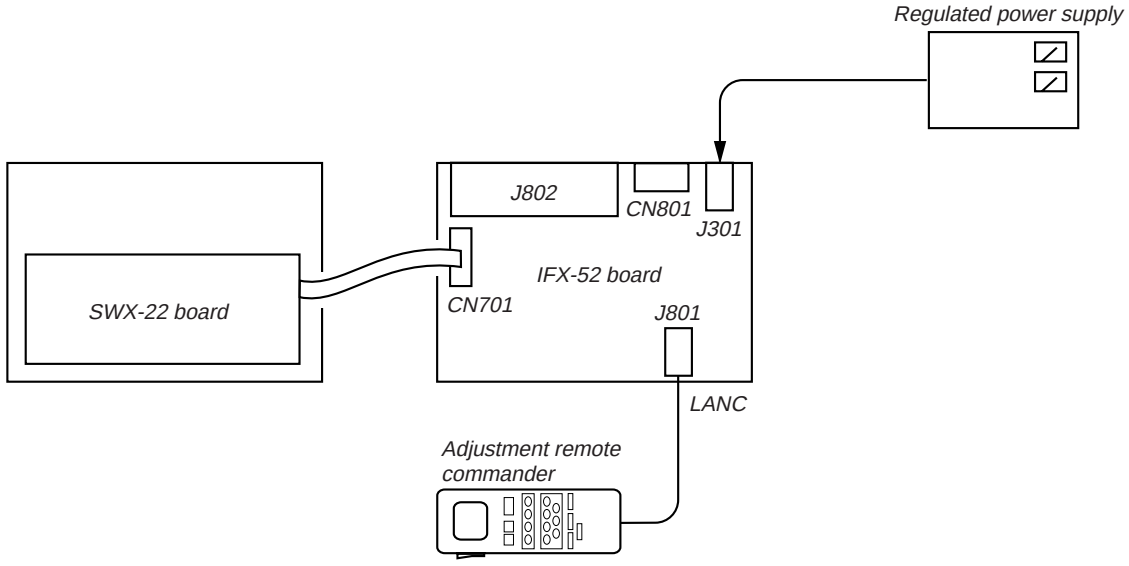

Fig. 4-1

Fig.4-2 shows the 75% color bar signals recorded on the alignment tape for Audio Operation Check.

Note: Measure with video terminal (Terminated at 75 Ω)

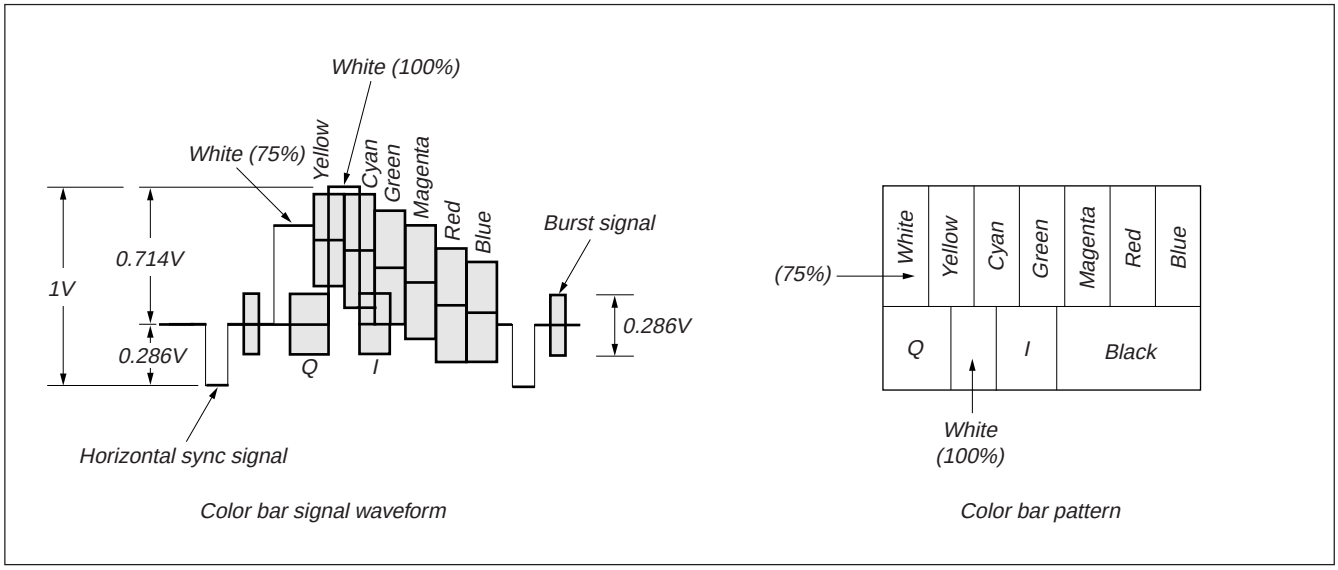

Fig. 4-2

4. Input/Output Level and Impedance

Video input
- Pin jack
- Video signal: 1Vp-p, 75 Ω unbalanced, sync negative

S video input
- 4-pin mini DIN
- Luminance signal: 1Vp-p, 75 Ω unbalanced, sync negative
- Chrominance signal :0.286 Vp-p, 75 Ω unbalanced

Audio input
- Pin jack
- Input level: 327mV
- Input impedance: 47kΩ or more

Video output
- Pin jack
- Output signal: 1Vp-p, 75Ω unbalanced, sync negative

S video output
- 4-pin mini DIN
- Luminance signal: 1Vp-p, 75Ω unbalanced, sync negative
- Chrominance signal: 0.286Vp-p, 75Ω unbalanced, sync negative

Audio output
- Pin jack
- Output level: 327 mV (across 47Ω load)
- Output impedance: 10kΩ or less

4-2. INITIALIZATION OF C PAGE DATA

1. Initializing the C Page Data

Note: If the page C data is initialized, the following adjustments must be performed again.

1) Modification of C page data
   Be sure to read all of the "Fixed data-2" and take note of them before starting initialization. After the C page data is initialized, be sure to input the same data that has been noted before. (Refer to Table 4-1.)
2) Video system adjustment

Adjusting page	C
Adjusting Address	00 to DF

Initializing Method:

1) Select page: 0, address: 01, and set data: 01.
2) Select page: 3, address: 80, set data: 0C, and press the PAUSE button of the adjustment remote commander.
3) Check that the data of page: 3, address: 80 is changed to "1C".
4) Perform "Modification of C Page Data".

2. Modification of C Page Data

If the C Page data has been initialized, change the data of the "Fixed data-2" address shown in the following table by manual input.

Modifying Method:

1) Before changing the data, select page: 0, address: 01, and set data: 01.
2) New data for changing are not shown in the tables because they are different depending on destination. When you want to change the data, copy the data built in the same set of the same destiration.
   Note: If the different set is copied, the camcorder may not operate.
3) To chang the data, press the PAUSE button of the adjustment remote commander each time when setting new data to write the data in the non-volatile memory.
4) Check that the data of adjustment addresses is the initial value. If not, change the data to the initial value.

Processing after Completing Modification of C Page data

1) Select page: 2, address: 00, and set data: 29.
2) Select page: 2, address: 01, and set data: 29, and press the PAUSE button of the adjustment remote commander.

3. C Page Table

Note: Fixed data-1 : Initialized data. (Refer to "1. Initializing the C Page Data".)
Fixed data-2 : Modified data. (Refer to "2. Modification of C PAGE Data").

Address	Initial value	Remark
00 to 24		Fixed data-1 (Initialized data)
25	88	S VIDEO output Y level adj.
26	E3	S VIDEO output Cr level adj.
27	A1	S VIDEO output Cb level adj.
28 to 2A		Fixed data-1 (Initialized data)
2B	04	Chroma BPF fo adj.
2C to 30		Fixed data-1 (Initialized data)
31 to 33		Fixed data-2
34 to 55		Fixed data-1 (Initialized data)
56		Fixed data-2
57 to 7D		Fixed data-1 (Initialized data)
7E to 7F		Fixed data-2
80 to A9		Fixed data-1 (Initialized data)
AA	80	PLL adj.
AB to DF		Fixed data-1 (Initialized data)
E0 to FF		

Table. 4-1

4-3. INITIALIZATION OF D PAGE DATA

1. Initializing the D Page Data

Note: If the page D data is initialized, the following adjustments must be performed again.

1) Modification of D page data
   Be sure to read all of the "Fixed data-2" and take note of them before starting initialization. After the C page data is initialized, be sure to input the same data that has been noted before. (Refer to Table 4-2.)

Adjusting page	C
Adjusting Address	00 to 8F

Initializing Method:

1) Select page: 0, address: 01, and set data: 01.
2) Select page: 3, address: 80, set data: 0D, and press the PAUSE button of the adjustment remote commander.
3) Check that the data of page: 3, address: 80 is changed to "1D".
4) Perform "Modification of D Page Data".

2. Modification of D Page Data

If the D Page data has been initialized, change the data of the "Fixed data-2" address shown in the following table by manual input.

Modifying Method:

1) Before changing the data, select page: 0, address: 01, and set data: 01.
2) New data for changing are not shown in the tables because they are different depending on destination. When you want to change the data, copy the data built in the same set of the same destiration.
   Note: If the different set is copied, the camcorder may not operate.
3) To chang the data, press the PAUSE button of the adjustment remote commander each time when setting new data to write the data in the non-volatile memory.
4) Check that the data of adjustment addresses is the initial value. If not, change the data to the initial value.

Processing after Completing Modification of C Page data

1) Select page: 2, address: 00, and set data: 29.
2) Select page: 2, address: 01, and set data: 29, and press the PAUSE button of the adjustment remote commander.

3. D Page Table

Note: Fixed data-1 : Initialized data. (Refer to "1. Initializing the D Page Data".)
Fixed data-2 : Modified data. (Refer to "2. Modification of D PAGE Data").

Address	Initial value	Remark
00 to 63		Fixed data-1 (Initialized data)
64, 65		Fixed data-2
66 to 7B		Fixed data-1 (Initialized data)
7C to 7D		Fixed data-2
7E to 8F		Fixed data-1 (Initialized data)
90 to FF		

Table. 4-2

4-4. VIDEO SYSTEM ADJUSTMENTS

Connection of Video System Measuring Instruments

Connect the video system measuring instruments as shown in Fig. 4-3.

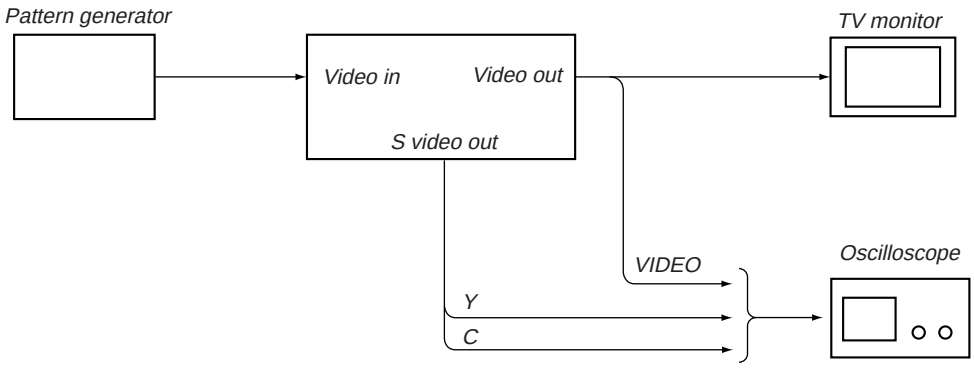

Fig. 4-3

1. Chroma BPF f0 Adjustment

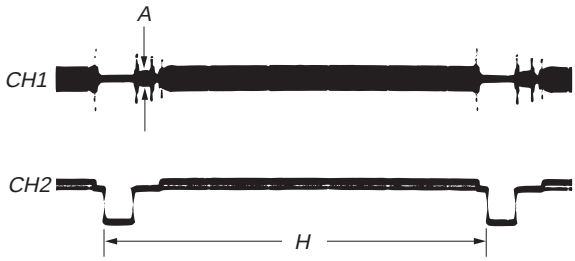
Set the center frequency of IC001 chroma band-pass filter.

Mode	Digital EE
Signal	No signal
Measurement Point	CH1: Chroma signal terminal of S VIDEO jack (75 Ω terminated) CH2: Y signal terminal of S VIDEO jack (75 Ω terminated)
Measuring Instrument	Oscilloscope
Adjustment Page	C
Adjustment Address	2B
Specified Value	A = 100mVp-p or less B = 200mVp-p or more

Adjusting method:

1) Select page: 0, address: 01, and set data: 01.
2) Select page: C, address: 56, set data: 00, and press the PAUSE button of the adjustment remote commander. (digital EE mode)
3) Check that the burst signal (B) is output to the chroma signal terminal.
4) Select page: 3, address: 0C, set data: 04, and press the PAUSE button of the adjustment remote commander.
5) Select page: C, address: 2B, and change the data (in the range of 00 to 07) for minimum amplitude of the burst signal level (A).
6) Press the PAUSE button of the adjustment remote commander.
7) Select page: 3, address: 0C, set data: 00, and press the PAUSE button of the adjustment remote commander.
8) Check that the burst signal level (B) is satisfied the specified value.
9) Select page: C, address: 56, set data: 08, and press the PAUSE button of the adjustment remote commander.
10) Select page: 0, address: 01, and set data: 00.

When the page: 3, address: 0C data is 04:



When the page: 3, address: 0C data 00.

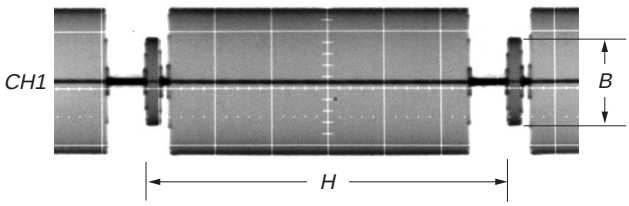


Fig. 4-4

2. S-VIDEO OUT Y Level Adjustment

Mode	VTR, Digital EE
Signal	No signal
Measurement Point	Y signal terminal of S VIDEO jack (75 Ω terminated)
Measuring Instrument	Oscilloscope
Adjustment Page	C
Adjustment Address	25
Specified Value	A = 1000 ± 14mVp-p

Adjusting method:

1) Select page: 0, address: 01, and set data: 01.
2) Select page: C, address: 48, set data: 06, and press the PAUSE button of the adjustment remote commander. (VTR mode)
3) Select page: C, address: 56, set data: 00, and press the PAUSE button of the adjustment remote commander. (digital EE mode)
4) Select page: 2, address: 35. After note down the data of this address, set data: 01 to the address.
5) Select page: 3, address: 0C, set data: 02, and press the PAUSE button of the adjustment remote commander.
6) Select page: C, address: 25, change the data and set the Y signal level (A) to the specified value.
7) Press the PAUSE button of the adjustment remote commander.
8) Select page: 3, address: 0C, set data: 00, and press the PAUSE button of the adjustment remote commander.
9) Select page: 2, address: 35. and set the data that is noted down at step 4).
10) Select page: C, address: 48, set data: 00, and press the PAUSE button of the adjustment remote commander.
11) Select page: C, address: 56, set data: 08, and press the PAUSE button of the adjustment remote commander.
12) Select page: 0, address: 01, and set data: 00.

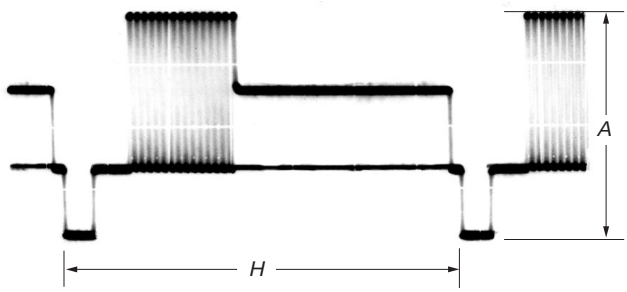

Fig. 4-5

3. S-VIDEO OUT Cr, Cb Level Adjustment

Mode	VTR, Digital EE
Signal	No signal
Measurement Point	Chroma signal terminal of S VIDEO jack (75 Ω terminated) External trigger: Y signal terminal of S VIDEO jack
Measuring Instrument	Oscilloscope
Adjustment Page	C
Adjustment Address	26, 27
Specified Value	Cr level: A = 714 ± 14mVp-p Cb level: B = 714 ± 14mVp-p Burst level: C = 286 ± 16mVp-p

Adjusting method:

1) Select page: 0, address: 01, and set data: 01.
2) Select page: C, address: 48, set data: 06, and press the PAUSE button of the adjustment remote commander. (VTR mode)
3) Select page: C, address: 56, set data: 00, and press the PAUSE button of the adjustment remote commander. (digital EE mode)
4) Select page: 2, address: 35. After note down the data of this address, set data: 01 to the address.
5) Select page: 3, address: 0C, set data: 02, and press the PAUSE button of the adjustment remote commander.
6) Select page: C, address: 26, change the data to adjust the Cr signal level (A) to the specified value.
7) Press the PAUSE button of the adjustment remote commander.
8) Select page: C, address: 27, change the data to adjust the Cb signal level (B) to the specified value.
9) Press the PAUSE button of the adjustment remote commander.
10) Check that the burst signal level (C) is satisfied the specified value.
11) Select page: 3, address: 0C, set data: 00, and press the PAUSE button of the adjustment remote commander.
12) Select page: 2, address: 35, and set the data that is noted down at step 4).
13) Select page: C, address: 48, set data: 00, and press the PAUSE button of the adjustment remote commander.
14) Select page: C, address: 56, set data: 08, and press the PAUSE button of the adjustment remote commander.
15) Select page: 0, address: 01, and set data: 00.

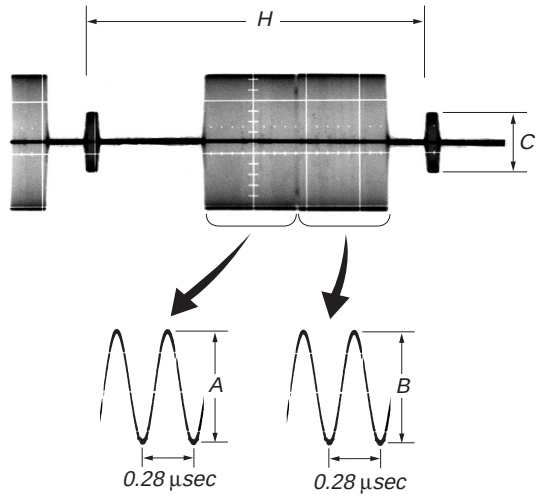

Fig. 4-6

4. VIDEO OUT Sync Level and Burst Level Check

Mode	Digital EE
Signal	No signal
Measurement Point	Measurement Point Video out terminal (75Ωterminated)
Measuring Instrument	Oscilloscope
Specified Value	Sync signal level: A = 286 ±20 mVp-p Burst signal level: B = 286 ±30 mVp-p

Adjusting method:

1) Select page: 0, address: 01, and set data: 01.
2) Select page: C, address: 56, set data: 00, and press the PAUSE button of the adjustment remote commander. (digital EE mode)
3) Check that the sync signal level (A) satisfies the specified value.
4) Check that the burst signal level (B) satisfies the specified value.
5) Select page: C, address: 56, set data: 08, and press the PAUSE button of the adjustment remote commander.
6) Select page: 0, address: 01, and set data: 00.

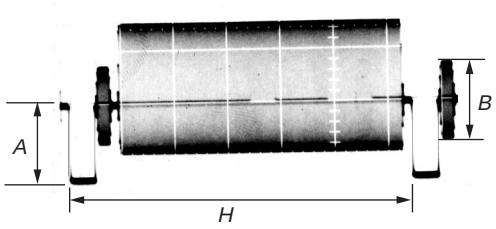

Fig. 4-7

5. PLL Adjustment

Set the VCO center level of the video input circuit (IC102).

Mode	Digital EE
Signal	Color bar (VIDEO IN terminal innput) <3.579545 MHz ±10Hz>
Measurement Point	Display data of page: 3, address: 04
Measuring Instrument	Adjustment remote commander
Adjustment Page	C
Adjustment Address	AA
Specified Value	0A

Adjusting method:

1) Select page: 0, address: 01, and set data: 01.
2) Select page: C, address: 56, set data: 00, and press the PAUSE button of the adjustment remote commander. (digital EE mode)
3) Select page: 3, address: 0C, set data: 80, and press the PAUSE button of the adjustment remote commander.
4) Select page: C, address: AA, and set data: 00, and press the PAUSE button.
5) Select page: 3, address: 04, and check. If the data is “0A” , proceed to step 8).
6) Select page: C, address: AA, add “10”(hexadecimal) to the data and press the PAUSE button.
7) Select page: 3, address: 04, and check the data is “0A” . If not repeat step 7).
8) Select page: 3, address: 0C, set data: 00, and press the PAUSE button of the adjustment remote commander.
9) Select page: C, address: 56, set data: 08, and press the PAUSE button of the adjustment remote commander.
10) Select page: 0, address: 01, and set data: 00.

4-5. SERVICE MODE

ADJUSTMENT REMOTE COMMANDER

The adjustment remote commander is used for changing the calculation coefficient in signal processing, EVR data, etc. The adjustment remote commander performs bi-directional communication with the unit using the remote commander signal line (LANC). The resultant data of this bi-directional communication is written in the non-volatile memory.

1. Using the adjustment remote commander

1) Connect the adjustment remote commander to the LANC terminal.
2) Set the HOLD switch of the adjustment remote commander to "HOLD" (SERVICE position). If it has been properly connected, the LCD on the adjustment remote commander will display as shown in Fig. 5-4-1.

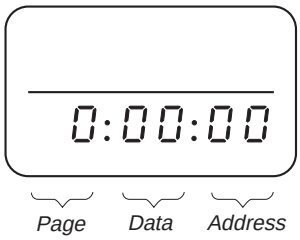

Fig. 4-8

3) Operate the adjustment remote commander as follows.
   - Changing the page
     The page increases when the EDIT SEARCH+ button is pressed, and decreases when the EDIT SEARCH– button is pressed. There are altogether 16 pages, from 0 to F.

Hexadecimal notation	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
LCD Display	0	1	2	3	4	5	6	7	8	9	A	b	c	d	E	F
Decimal notation conversion value	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

   - Changing the address
     The address increases when the FF (▶▶) button is pressed, and decreases when the REW (◀◀) button is pressed. There are altogether 256 addresses, from 00 to FF.
   - Changing the data (Data setting)
     The data increases when the PLAY (▶) button is pressed, and decreases when the STOP (■) button is pressed. There are altogether 256 data, from 00 to FF.
   - Writing the adjustment data
     The PAUSE button must be pressed to write the adjustment data (B, C, D, F page) in the nonvolatile memory. (The new adjusting data will not be recorded in the nonvolatile memory if this step is not performed.)
4) After completing all adjustments, turn off the main power supply (8.4V) once.

2. Precautions upon using the adjustment remote commander

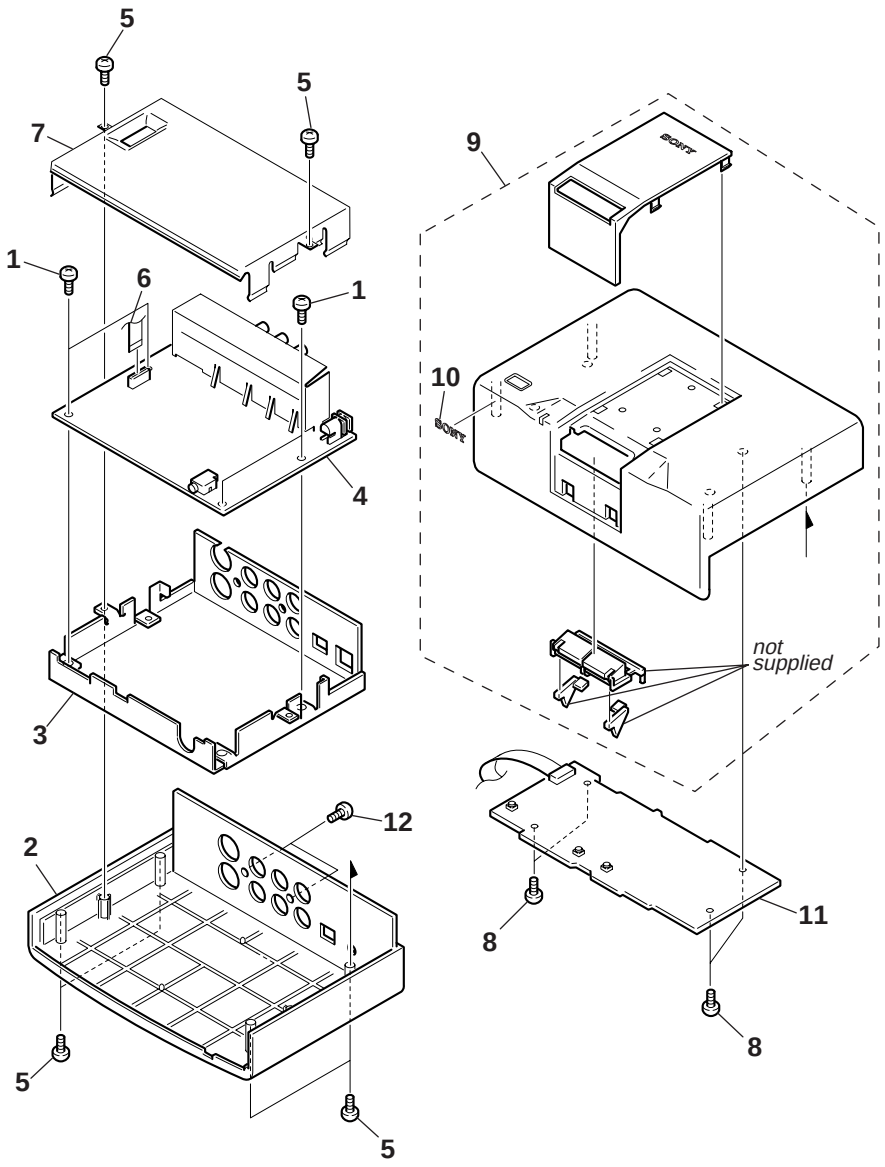
Mishandling of the adjustment remote commander may erase the correct adjustment data at times. To prevent this, it is recommended that all adjustment data be noted down before beginning adjustments and new adjustment data after each adjustment.

SECTION 5
REPAIR PARTS LIST

5-1. EXPLODED VIEWS

NOTE:

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.



Ref. No.	Part No.	Description	Remarks
1	4-639-967-01	SCREW, 0 PLATE SPECIAL HEAD	
2	X-4621-825-1	CABINET (LOWER) ASSY	
* 3	4-639-053-01	SHIELD (LOWER)	
4	A-8054-856-A	IFX-52 BOARD, COMPLETE	
5	4-982-491-01	SCREW (2 × 8), TAPPING	
6	1-790-197-11	FFC (IF-SW)	
* 7	4-639-054-01	SHIELD (UPPER)	
8	4-979-367-01	SCREW (M2 × 6)	
9	A-8044-701-A	CABINET (UPPER) BLOCK ASSY	
10	4-942-636-21	EMBLEM (NO.3.5), SONY	
11	A-8054-858-A	SWX-22 BOARD, COMPLETE	
12	7-685-647-74	+BV 3 × 10	

5-2. ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- CAPACITORS:
  uF: µF
- RESISTORS
  All resistors are in ohms.
  METAL: metal-film resistor
  METAL OXIDE: Metal Oxide-film resistor
  F: nonflammable
- COILS
  uH: µH

When indicating parts by reference number, please include the board name.

- SEMICONDUCTORS
  In each case, u: µ, for example:
  uA...: µA... , uPA... , µPA... , uPB... , µPB... , uPC... , µPC... , uPD..., µPD...

The components identified by mark ⚠ or dotted line with mark ⚠ are critical for safety.
Replace only with part number specified.

Les composants identifiés par une marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.
