## SAFETY CHECK-OUT (US Model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

### LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamper). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

### 2. ALL CLEAR

When ten-keys (4), (5) and (6) are pressed simultaneously and the power is turned on, all the RAMs are cleared and initialized.

### 3. 9kHz STEP

During AM 10kHz STEP TUNING, set to AM and turn off the power. Then press and hold down TUNING + key, turn on the power, and change AM TUNING STEP to 9kHz to initialize all the preset channels.

(When this procedure is performed during AM 9kHz STEP, AM TUNING STEP is changed to 10kHz.)

### 4. SUR CLEAR

When TONE ON/DEFEAT key is held down and the power is turned on, SOUND FIELD memory is initialized.

### 5. FL TUBE CHECK/KEY CHECK

When ten-keys (7), (8) and (9) are pressed simultaneously and the power is turned on, FL Tube TEST Display starts.

- All lighting
- One segment lighting for each digit
- Key count indication

The count is decremented for each key input. When it is down to zero, the POWER key is used to terminate this check.

### 6. DEMO

When SOUND FIELD is turned off and DISPLAY key continues to be held down (for 3 seconds), Demonstration starts. If any other key is input, this DEMO stops and processing for that key is done.

\*DEMO causes TONE data for ACOUSTIC and DOLBY SUR to be changed and set as follows:  
 DOLBY SUR's PROLOGIC MODE=PHANTOM  
 REAR/CENTER LEVEL=+6dB  
 DELAY TIME=21mS

In case of any key input, the state when DEMO is suspended by key input will be maintained.

### 7. LINK MEMORY

When LINK is held down and the power is turned on, all RAMs are cleared and initialized. Also, the following sound fields are stored in the respective functions and LINK is turned on.
