SECTION 1

SERVICING NOTE

Adjusting the Operating Voltage(E Model) SAFETY CHECK-OUT (US Model)

- When using in an area where the voltage is 240V.
When using a set designated for the E region (220V specifications) in an area where the voltage is 240V, reconnect the connector connected to CNV903 to CNV904.

[AC BOARD] COMPONENT SIDE

After correcting the original service problem, perform the following safety check before releasing the set to the customer:
Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK OR DOTTED LINE WITH MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

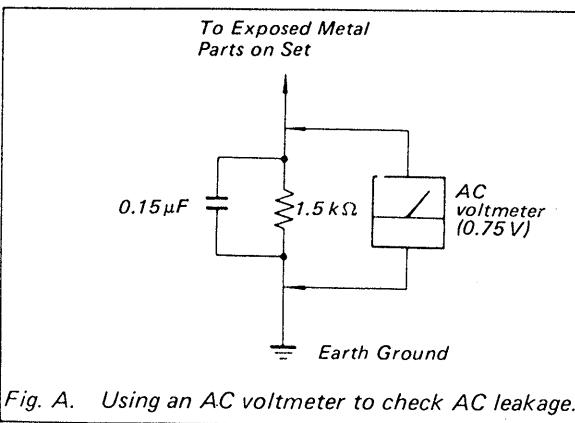

Fig. A. Using an AC voltmeter to check AC leakage.

Specifications (U.S.A. model)

POWER OUTPUT AND TOTAL HARMONIC DISTORTION

With 8-ohm load, both channels driven, from 20 – 20,000 Hz, rated 70 watts per channel minimum RMS power, with no more than 0.03% total harmonic distortion from 250 milliwatts to rated output.

Amplifier section

Outline

The TA-AV650/T.A-V650G is an AV amplifier with 5 power amplifiers. You can enjoy various audio and video program sources with this unit.

5 high power amplifiers

To enjoy surround sound system easily, the unit incorporates two 120-W (70-W for U.S.A. model) amplifiers for front speakers, one 120-W (70-W for U.S.A. model) amplifier for center speaker(s), and two 40-W (30-W for U.S.A. model) amplifiers for rear speakers.

Spontaneous twin drive power circuit

Condensers having large capacity are used for the voltage compaction drive stage of class A and power output stage of class B. Thus, a stable output and high quality sound are obtained, resulting in exclusion of power interferences. The class A stage realizes a stable operation free from interference of the power stage even when an instantaneous or strong output is received.

Super legato linear system

The power amplifier drives low impedance speakers and assures powerful reproduction without low crossover distortion and switching distortion over the wide range.

Gibraltar chassis

A hard chassis named "Gibraltar" which provides high rigidity and periodic damping characteristics, is employed to reduce distortion caused by vibrations. This reduces air vibrations caused by floor and speakers and also reduces vibrations caused by the power transformer and power transistors.

Digital surround sound system

The TA-AV650/T.A-V650G incorporates a Digital Surround Processor and a Digital Signal Processor. All of 5 types of surround effect - DOLBY*, THEATER, HALL, JAZZ CLUB, and STADIUM have been preset. (Refer to page 18.)

Video and audio control center

- You can control up to 7 video sources - VTRs, a LD player, and a TV (BS) tuner.
- You can add sounds from various audio program sources to video programs using the "MIX" function. (Refer to page 15.)
- You can label to the input selector as you desire. (Refer to page 16.)

Automatic input balance adjusting system

The TA-AV650/T.A-V650G can automatically adjust the input balance on the DOLBY and THEATER surround mode.

Source direct button

A source direct button is employed to reproduce high fidelity sound. Any source can be reproduced without passing through the circuits of surround sound system, tone control, and balance control.

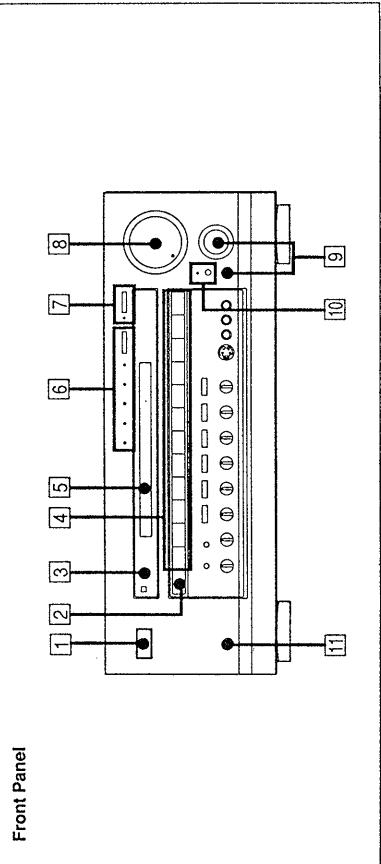

Tone control system for the surround speakers

You can compensate the tone of the surround sounds from front speakers, center speaker(s), and rear speakers independently.

Programmable system commander RM-P650

The supplied remote commander can "learn" the various functions of other infrared type remote commanders.

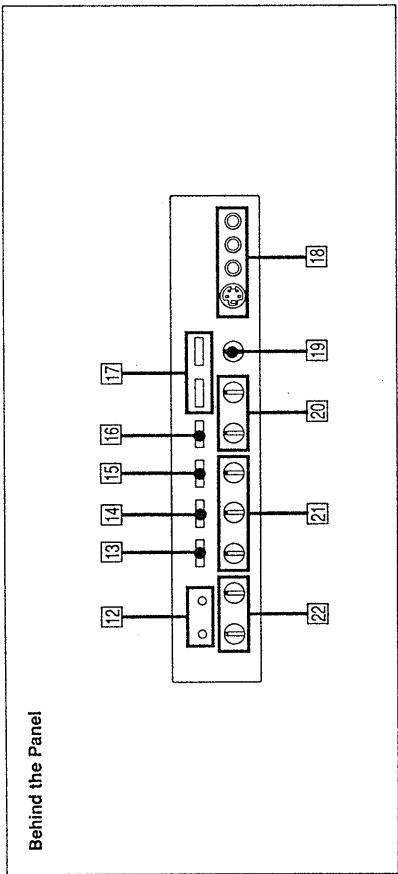

Functions of Controls

Front Panel

- ① POWER switch**
Press to turn on the unit. Press again to turn off.
- ② MIX button**
Press to combine a visual source and an audio source.
(Display: VISUAL source → AUDIO source → off)
- ③ Remote control sensor**
- ④ Input selectors**
Select the program source.
- ⑤ Display**
- ⑥ SURROUND MODE selector and indicators**
Selects the surround mode. To set the surround mode to off, press the selector so that no indicator lights up.
(Display and indicators: DOLBY → THEATER → HALL → JAZZ CLUB → STADIUM → off)
- ⑦ SOURCE DIRECT button and indicator**
To enjoy more pure sound, press the button so that the indicator lights up. The sound signal of the program source are directly output to the power amplifier sections without passing through the surround processor, tone control, and balance control.
- ⑧ MASTER VOLUME control and indicator**
Controls the volume level. To increase the volume level, turn the control clockwise. To decrease the volume level, turn the control counterclockwise.
- Note**
Turn down the volume before switching on the unit. This prevent damage to speakers.

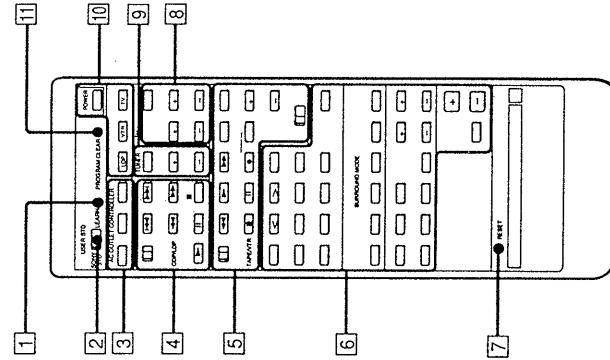

Behind the Panel

- ⑨ BALANCE control**
Adjusts the balance of the right and left front speakers.
- ⑩ FRONT tone controls**
Control the tone quality of the front speakers.
BASS: Adjusts bass sound.
TREBLE: Adjusts treble sound.
- ⑪ CENTER tone controls**
Control the tone quality of the center speaker(s).
BASS: Adjusts bass sound.
MID: Adjusts middle sound.
TREBLE: Adjusts treble sound.
- ⑫ REAR tone controls**
Control the tone quality of the REAR speakers.
BASS: Adjusts bass sound.
TREBLE: Adjusts treble sound.
- ⑬ DISPLAY MODE button**
Press the button to turn on and off the display information. When the display is turned off, to operate the other buttons or controls makes all information to indicate on the display for a few minutes.
- ⑭ PRO LOGIC MODE button**
Selects the speaker operation mode of DOLBY Pro Logic function.
(Display: NORMAL → WIDE → PHANTOM → 3 CH. LOGIC → CENTER OFF)
- ⑮ TEST TONE button**
Turns on and off the test tone to adjust the balance among front, rear, and center speakers.
- ⑯ CHARACTER button**
Labels to input selectors.
- ⑰ REC OUT buttons**
SET: Sets the desired program source for recording
while you listen to watch another program source.
CHECK: Displays the program source set with the SET button.
- ⑱ VIDEO 5 input jacks**
Accept S-video, video, and audio input signals.

Functions of Controls

Programmable Remote Commander RM-P650

The RM-P650 can "learn" various functions of other remote commanders which use infrared rays. When the mode selector is set to SONY STD (Sony standard), buttons on the RM-P650 can be used to perform the functions below:

[1] LEARN indicator

Lights up when learning functions.

[2] MODE selector

SONY STD (standard): To control Sony equipment
USER STD (standard): To control equipment whose
remote control functions are stored.
LEARN: To store functions of other remote commanders
emitting infrared rays.

[3] AC OUTLET CONTROLLER buttons

These buttons does not operate with this unit.

[4] CD player/LD player control section

CD/LD selector: Selects CD player or LD (Laser Disc) player to be played. The combined CD/LD player can be controlled with this selector set to LDP.

▶: Play

■: Pause

■: Stop

◀▶◀▶: AMS (Automatic Music Sensor)

◀▶◀▶: Manual search (only for LD player)

[5] Tape deck/VTR control section

TAPE/VTR selector: Selects TAPE (tape deck) or VTR to be controlled.

▶: Play

■: Pause

■: Stop

◀: Rewind

▶: Fast forward

●REC: Recording (Press both ●REC button and the right button for recording.)

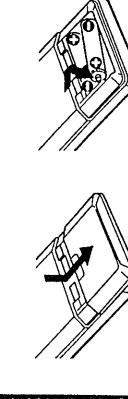

Loading the Batteries

Insert two R6 (size AA) batteries with correct polarity.

[1]

[2]

Following buttons can be used when the TAPE/VTR selector is set to VTR.

DUAL button: Selects bilingual programs.
ANT (antenna) TV/VTR button: Selects the output signal from the antenna terminal on the VTR, either a TV signal or VTR programs.

CH (channel) +/- buttons: Select channel on the VTR.
VTR 1, 2, and 3 selector: Selects VTR type.
(1: Betamax VTRs, 2: 8 mm VTRs, 3: VHS VTRs)

[6] Amplifier control section
VIDEO 1-5, LD, TV, TAPE 1-2, CD, TUNER, PHONO buttons: Selects program sources.

MIX button: Combines a visual source and an audio source.

SURROUND MODE (ON/OFF, DOLBY THEATER, HALL, JAZZ CLUB, STADIUM) selectors: Selects the surround mode.

MODE button: Selects the parameter.
ACOUSTIC CONTROL buttons: Adjust the parameter.
PRO LOGIC MODE button: Selects a speaker operation mode on the DOLBY Pro Logic mode.
TEST TONE button: Turns on and off the test tone.

MASTER VOL +/- buttons: Adjust the level from LINE OUT and HEADPHONES jacks.

MUTING button: Mutes the output signal.

[7] RESET button
Reset the commander to the initial state.

[8] TV control section
TV/VIDEO button: Selects the input signal of the TV.

CH +/- buttons: Select a preset channel.
VOL +/- buttons: Control the TV volume.

[9] Tuner control section
BAND button: Selects the frequency band.

PRESET +/- buttons: Selects a higher or lower preset number.

[10] POWER buttons
POWER: Turns on and off the TA-AV650/TA-AV650G.

LDP POWER: Turns on and off the LD player.
VTR POWER: Turns on and off the VTR selected by the VTR 1, 2, 3 selector (usable only when the TAPE/VTR selector is set to VTR).

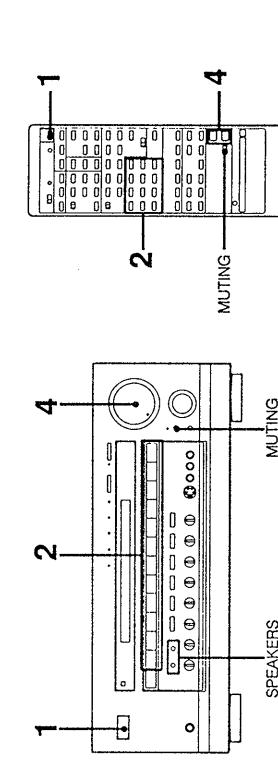

TV POWER: Turns on and off the TV.

[11] PROGRAM CLEAR button
Clears the stored functions.

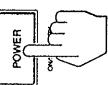

Listening to/Watching Program Sources

Basic Operation

- Turn on the connected audio/video equipment.
- Set the SPEAKERS buttons to ON (▲).

- 1 Turn on the POWER switch.
When the MUTING Indicator has been lit up
Press the MUTING button to turn it off.

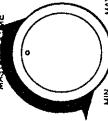

- 2 Select the program source.

- 3 Play back the selected program source.
When the MIX button is pressed after both video and audio program sources have been set
The mix function is cancelled and the audio and video signals of the selected video program source is output.

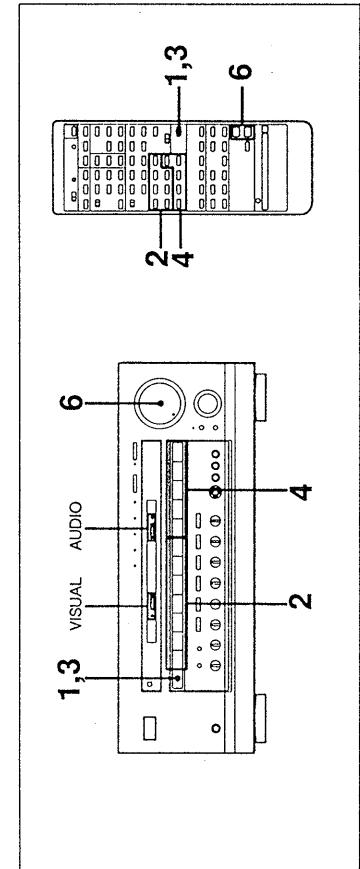

- 4 Adjust the volume level.
If the MIX button is pressed after both video and audio program sources have been set
The mix function is cancelled and the audio and video signals of the selected video program source is output.

Combining the Video Image with the Sound from Another Program Source

The MIX function allows you to combine a video image with sound from another program source as background music.

- 1 Turn on the POWER switch.
When the MUTING Indicator has been lit up
Press the MUTING button to turn it off.

- 2 Select the video source.

- 3 Turn the volume level.
Adjust the volume level.

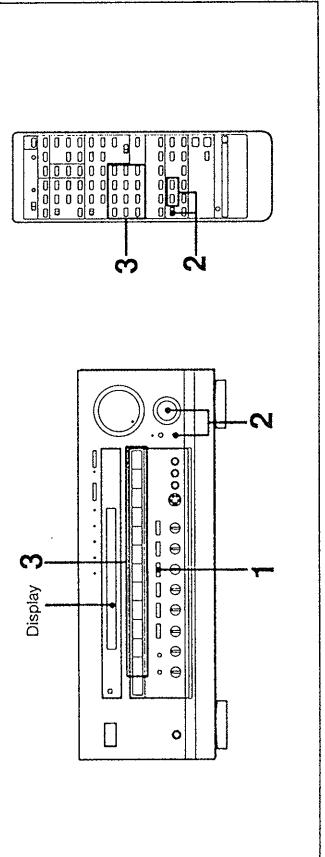

- 4 Select the audio source. The audio signal of video source can be also selected.
When the MIX button is pressed after both video and audio program sources have been set
The mix function is cancelled and the audio and video signals of the selected video program source is output.

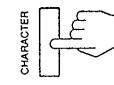

Listening to/Watching Program Sources

Putting Your Own Label on Input Selectors

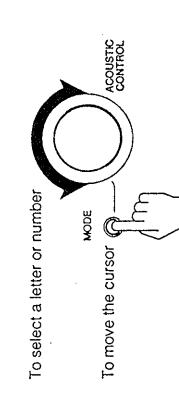

You can put a label of up to 8 characters on an input selector. The label will appear in the display window when a selector is pressed.

2 Create a name. Three of video selectors may be labeled as VHS, Beta, and 8mm, for example.

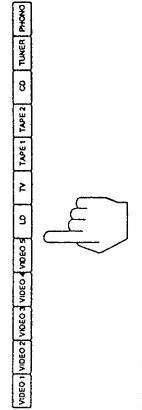

To select a letter or number
To move the cursor
MODE ACUSTIC CONTROL

Now, to resume the last name press the CHARACTER button again.

3 Select an input selector to be labeled.

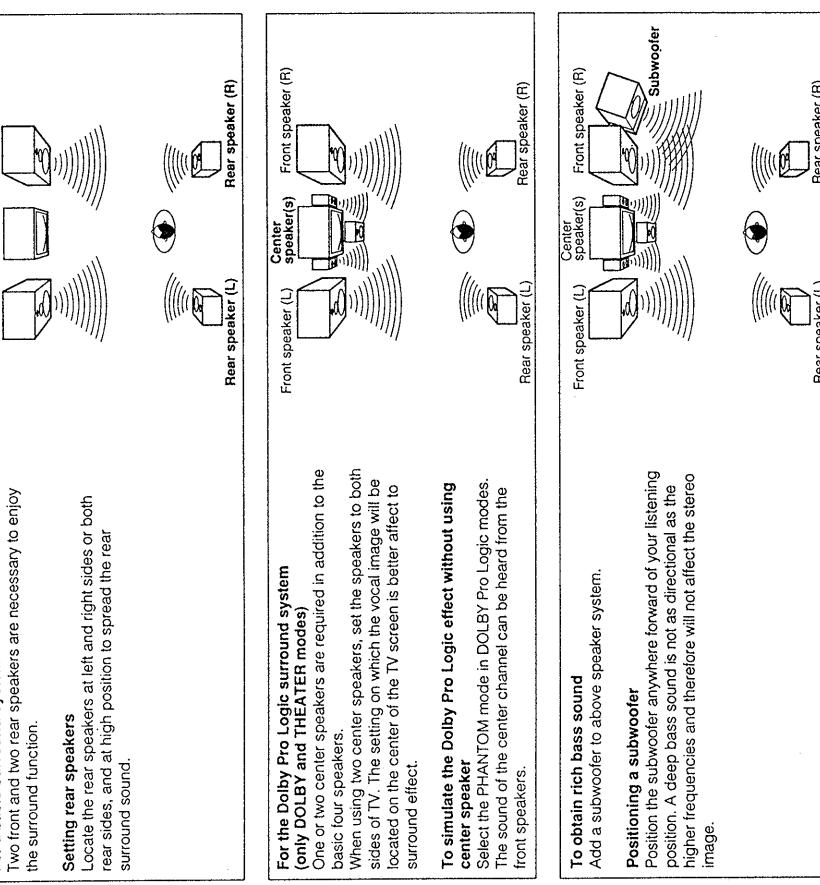

VHS | VHS2 | VHS3 | VHS4 | VHS5 | VHS6 | VHS7 | CO | TOWER | PRO

Getting Ready to Enjoy Surround Sound

Positioning the Speakers

Where you place the speakers depends on the size and acoustics of the listening room. The figure below are just examples.

On speaker affinity
To enjoy the surround sound at its best, you should use the same type of speakers for the front, center and rear. If this is not possible, use speakers with the similar efficiency, impedance and sound quality.

Getting Ready to Enjoy Surround Sound

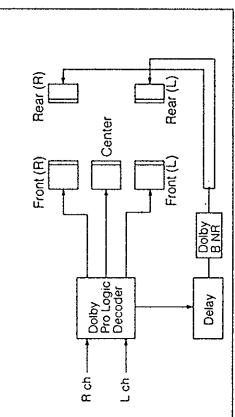

Function of the Surround Sound Modes

The TA-AV650/TA-AV650G incorporates Digital Signal Processor and digital surround processor which contains Dolby Pro Logic Decoder. The digital surround processor electronically reproduces the five kinds of surround soundfield programs which have been preset in the factory as shown below. In the DOLBY and THEATER modes, speaker operation modes can be changed with the Dolby Pro Logic Decoder.

You can enjoy the digital surround sound effects easily by just selecting the surround mode according to the program source.

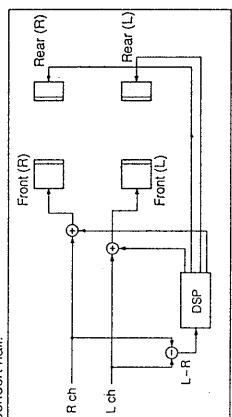

DOLBY mode (using Pro Logic function)

This mode is for reproducing the movie or sound program source processed with Dolby surround system on which the  mark is labeled. You can hear dynamic sound and natural voice just like listening to it in a movie theater. In the mode, reverberation effect is added to the signal processed through the Dolby Pro Logic Decoder.

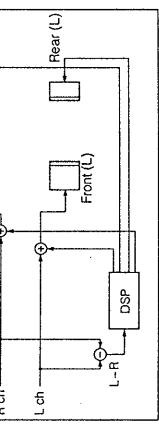

JAZZ CLUB mode

You can hear the powerful and clear sound having an effect that is produced in a jazz club.

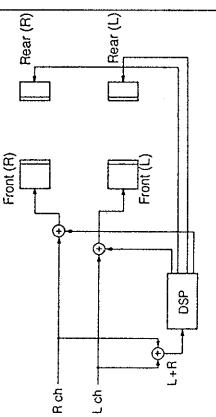

HALL mode

You can hear the naturally acoustic sound having a reverberation effect that is produced in a medium sized concert hall.

STADIUM mode

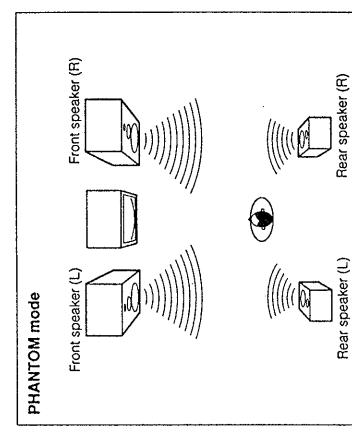

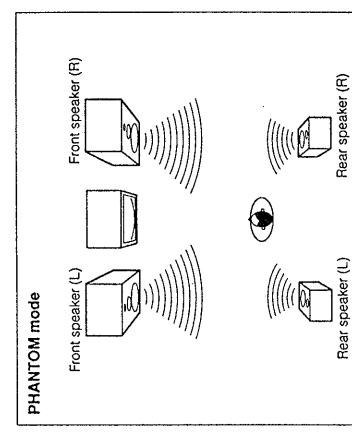

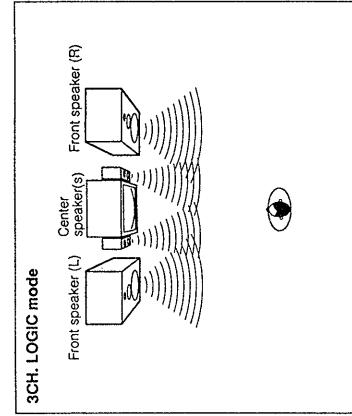

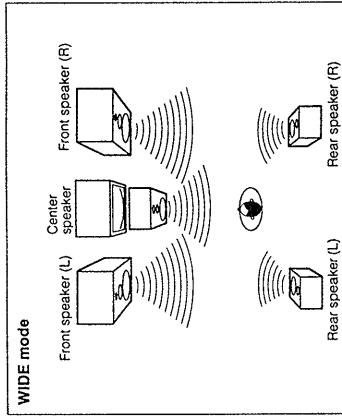

This mode is for adding the reverberation effect that is felt in an outdoor stadium to a program source recorded in studio.

Selecting the Speaker Operation Mode in the Dolby Pro Logic Function (for DOLBY and THEATER Modes)

In the DOLBY and THEATER surround modes, a speaker operation mode can be selected to match your speaker system. Press PRO LOGIC MODE button to select the appropriate mode.

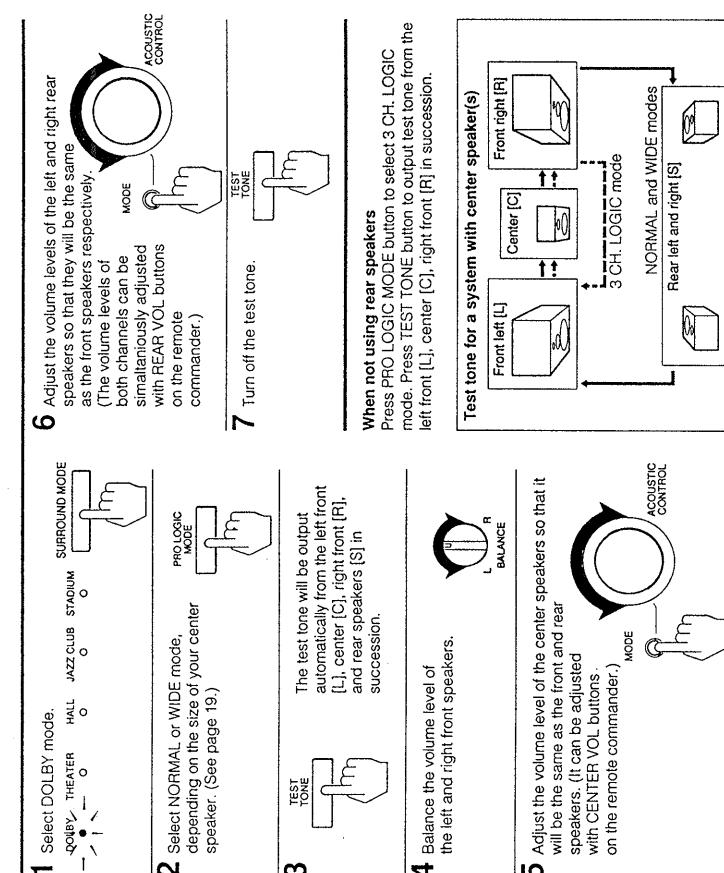

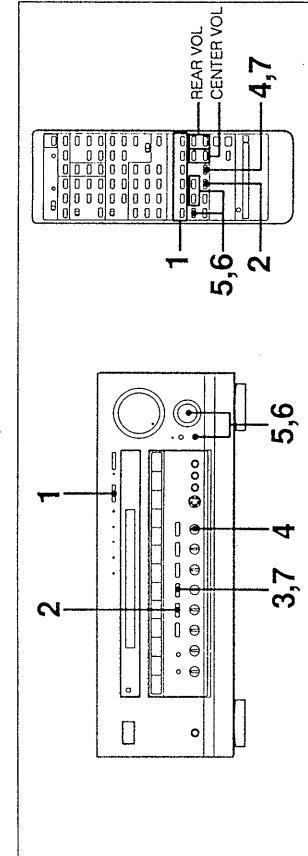

Dolby Pro Logic Mode	Speaker Operating Function
NORMAL	Select this mode if you use small center speaker(s). The bass sound of the center channel is output from the front speakers, as small speaker(s) cannot produce enough bass.
WIDE	Select this mode if you use a medium to big center speaker.
PHANTOM	Select this mode when you do not use center speaker(s). The sound of the center channel can be heard from the front speakers.
3 CH. LOGIC	Select this mode when you do not use rear speakers. The sound of the rear channels can be heard from the front speakers.
CENTER OFF	This mode is only used for checking the input balance in Dolby surround mode. The sound of the center channel, such as voice or vocal, is not heard from the speakers.

Getting Ready to Enjoy Surround Sound

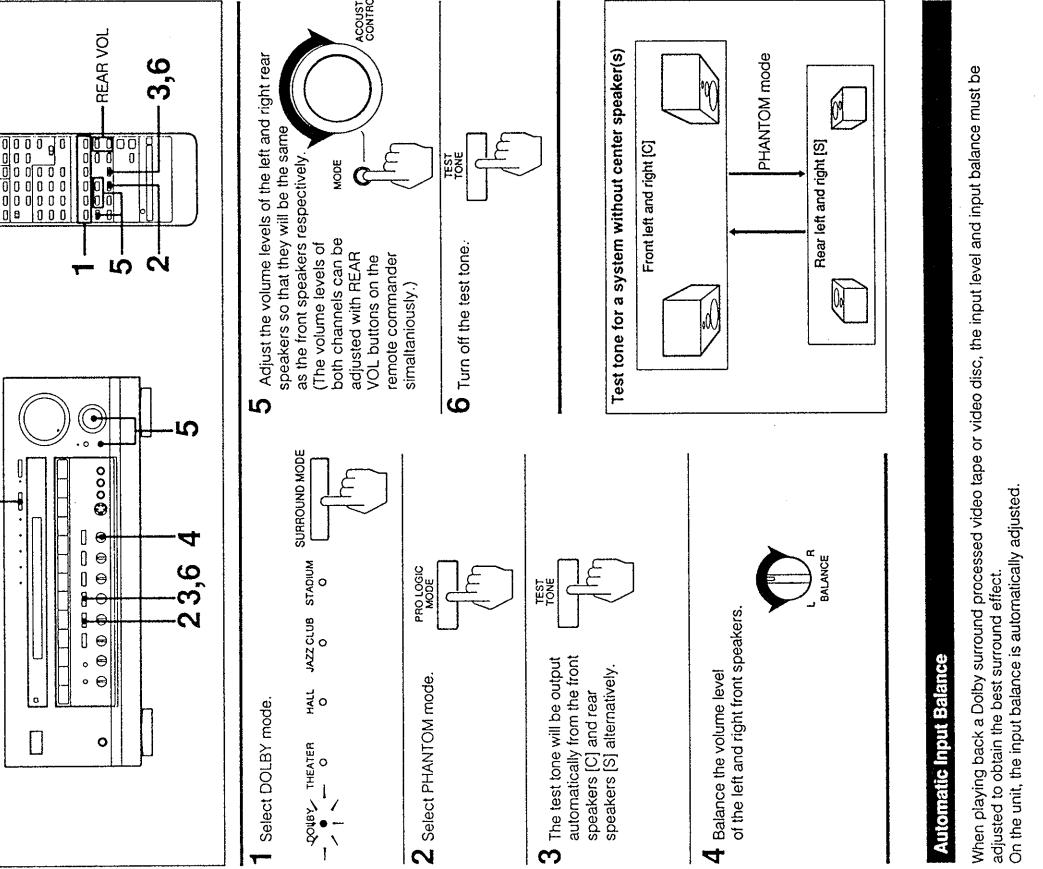

Adjusting the Volume Level of the Surround Speakers for a System with Center Speaker(s)

To enjoy the surround sound sufficiently, adjust the front, rear and center speakers to the same volume level. The adjustment must be done with a test tone in the Dolby surround mode, but the level once adjusted can be used for all surround modes. You can adjust the volume level from your listening position if you use the remote commander.

Adjusting the Volume Level of the Surround Speakers for a System without Center Speaker(s)

To enjoy the surround sound sufficiently, adjust the front, rear and center speakers to the same volume level. The adjustment must be done with a test tone in the Dolby surround mode, but the level once adjusted can be used for all surround modes. You can adjust the volume level from your listening position if you use the remote commander.

Enjoying the Surround Sound

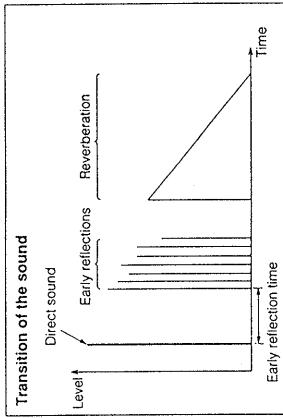

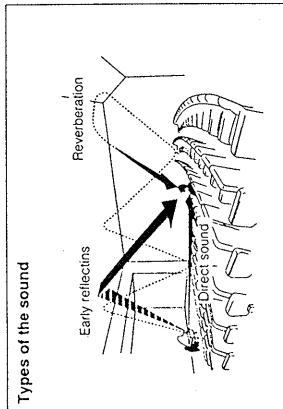

Understanding the Digital Surround System

The sound heard in a place such as a concert hall or a movie theater consists of direct sound, an early reflected sound (early reflections), and reverberative sound (reverberation). The acoustics of the room affects the way these three sounds are heard. We can estimate the size or the type of a hall by listening to an differentiating these three kinds of sound.

The unit reproduces the early reflections and the

reverberation using its digital signal processor and allows you to design a variety of soundfields in your own room.

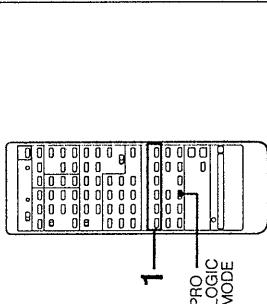

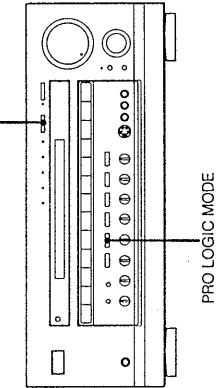

Note
Each surround mode has several internal (fixed) parameters explained in this section. Therefore, surround modes will not become the same even if you set all adjustable

Selecting the Surround Mode

The unit has five surround modes: DOLBY, THEATER, HALL, JAZZ CLUB, and STADIUM modes which have been preset in the factory. Since these programs are appropriate for the most types of music and listening situations, you can

enjoy the digital surround sound effects by just selecting the surround mode according to the program source. You can also adjust several parameters to maximize the effect. (See page 23.)

- 1 Select a surround mode.
- 2 To resume the surround mode
Press the SURROUND MODE selector so that no indicator lights up. On using the remote commander, press the ON/OFF button in SURROUND MODE to turn off the indicator.

When selecting speaker operation modes on the Dolby Pro Logic mode
After selecting the DOLBY or THEATER mode, press the PRO LOGIC MODE button. (See page 19.)

Adjustable Parameters

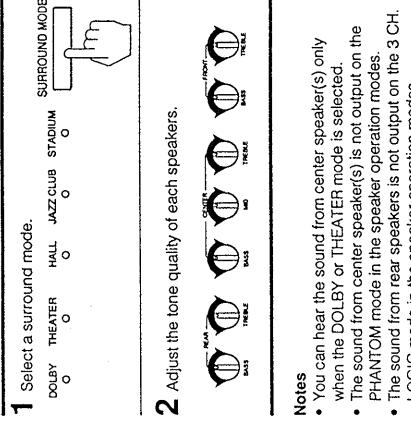

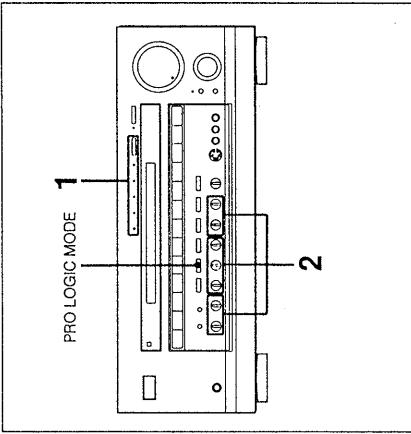

The unit reproduces the early reflections and three reverberation using its digital signal processor and allows you to design a variety of soundfields in your own room. The unit incorporates 5 types of surround modes, and within each mode, you can adjust several parameters to maximize the effect in your listening room.

Parameters	SURROUND MODES	DOLBY	THEATER	HALL	JAZZ CLUB	STADIUM
Rear Level		O	O	O	O	O
Center Level		O*1	O*1	O*	O	O
Early Reflection Time			O*2	O	O	O
Delay Time		O*2				
Effect Level				O	O	O

- *1 Center level is not adjusted on the PHANTOM mode in the Dolby Pro Logic modes.
- *2 Early reflection time is not adjustable on the 3 CH. LOGIC mode in the Dolby Pro Logic modes.
- Adjusting the rear level and center level is shown on pages 20 and 21.
- Adjusting the delay time is shown on page 24.
- The data of the early reflection time and delay time can be programmed into each surround mode individually. The data of the rear, center, and effect level are same data on all modes.

Adjusting the Tone Quality of Speakers

To enjoy the surround sound sufficiently, adjust the tone of the front, center, and rear speakers respectively to the same quality.

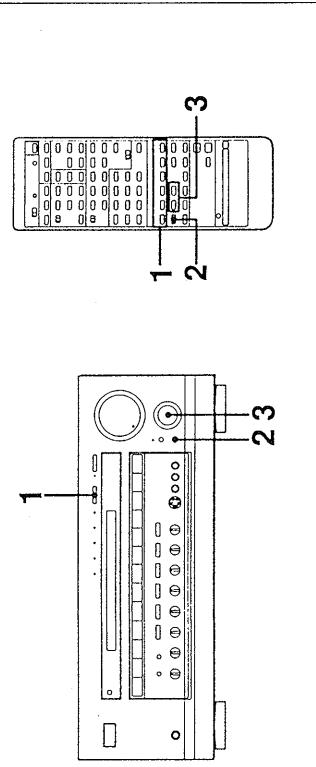

- Notes
- You can hear the sound from center speaker(s) only when the DOLBY or THEATER mode is selected.
 - The sound from center speaker(s) is not output on the PHANTOM mode in the speaker operation modes.
 - The sound from rear speakers is not output on the 3 CH. LOGIC mode in the speaker operation modes.

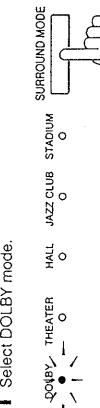

Enjoying the Surround Sound

Adjusting the Delay Time of the Rear Speakers (Only for DOLBY Surround Mode)

The delay time is a line between the surround sound from the front speakers (as direct sound) and that from rear speakers (as reflected sound). The delay time is adjustable from 15 ms to 30 ms. When setting the rear speakers in a large room or apart from your listening position, set the delay time short.

1 Select DOLBY mode.

2 Display the delay time mode.

3 Adjust the delay time of the rear speakers.

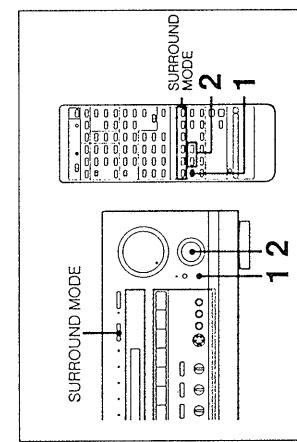

Adjusting the Early Reflection Time (Except for DOLBY Surround Mode)

The early reflection time is the key parameter which determines the room size and listening position.

Adjustment of this parameter will vary the time required for the sound to reach to the listening position.

The adjustable range is from 0 ms to 90 ms, and the longer the time, the longer you will feel the distance to the origin of the sound.

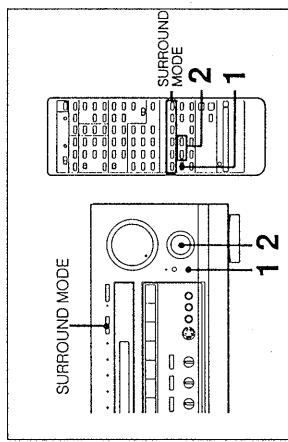

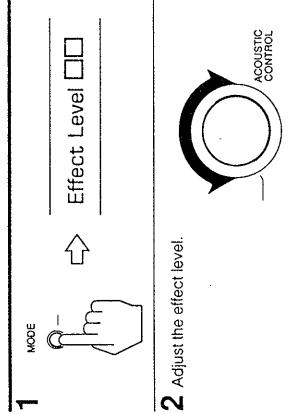

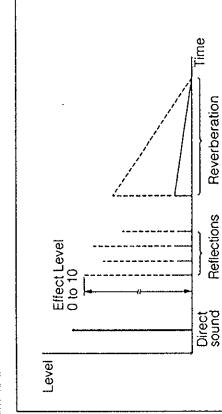

When adjusting the parameter:
Noise may be output.

Note
Adjusting the delay time of the rear speakers is available for the Dolby surround processed source.

Adjusting the Effect Level (Except for DOLBY Surround Mode)

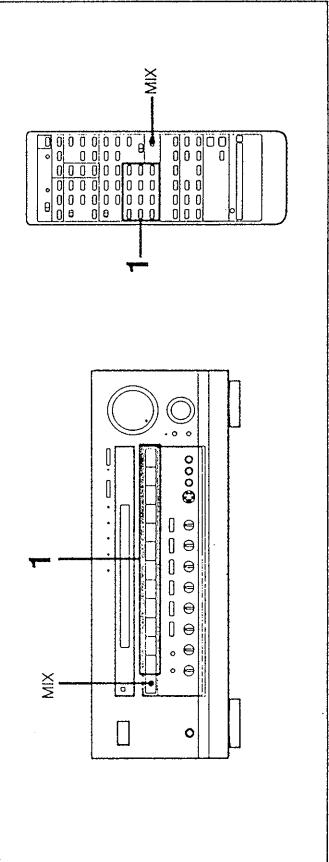

This parameter adjusts the level of early reflections and reverberation. The adjustable range is from 0 to 100%, and as the number gets larger, the room becomes more "live", and as it gets smaller, the room becomes "dead".

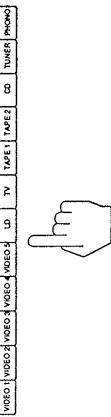

Recording Audio/Video Program Sources

Basic Operation

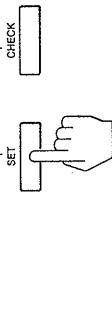

You can operate two or more video or tape decks for recording at the same time as the audio (and video) signals of the program source is output simultaneously through all recording output jacks.

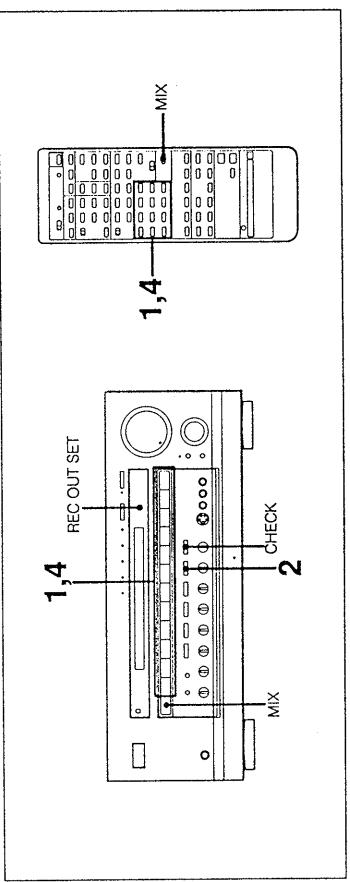

- 1** Select the video or audio program source.
If you want to combine video image and the sound from another audio source, press the MIX button to select them independently. (See page 15.)

- 2** Set the video or tape deck in the recording mode.

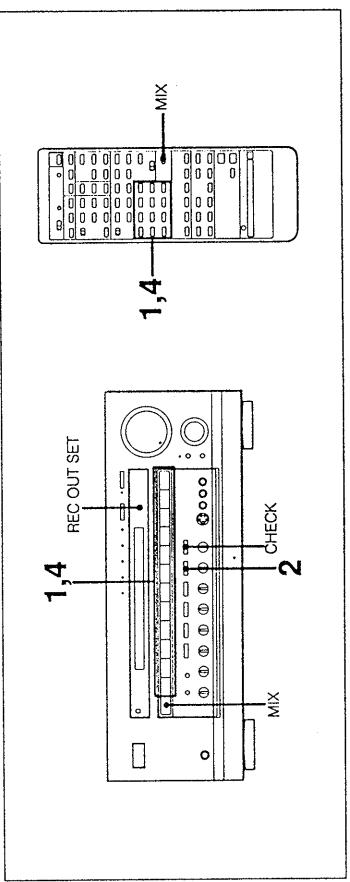

- 3** Play back the selected program source(s) to be recorded and set the video or tape deck into the recording mode.

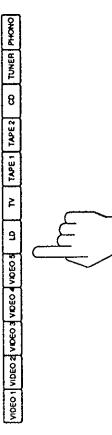

Recording Program Sources While Listening to/Watching Another

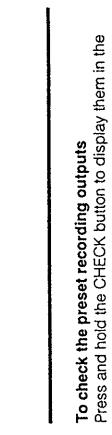

This unit has separate circuits for line output and or recording, so you can record a program source while listening to/watching another.

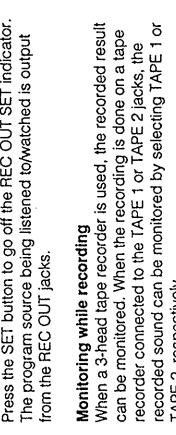

- 4** After checking that the REC OUT SET is indicated in the display, select the program source to be listened to/watched.

- 5** Play back the selected program source(s).

- Press and hold the CHECK button to display them in the display window.

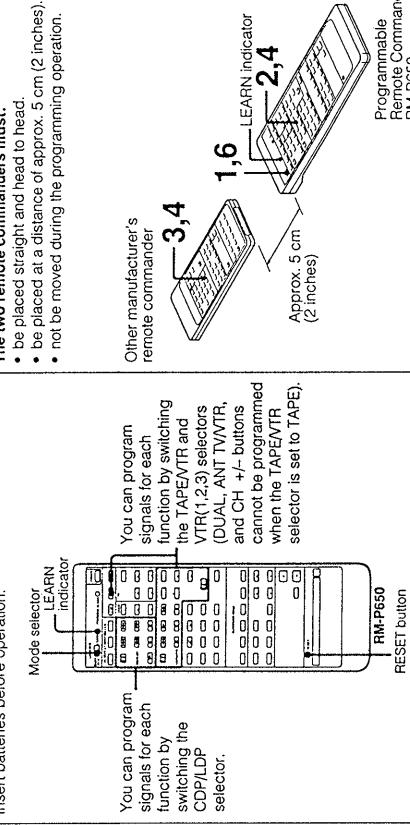

Using the Remote Commander

- When you manipulate buttons on the commander, be sure to point the head of the commander toward the remote control sensor on the front of the amplifier.
- If there is an obstacle between the amplifier and the head of the commander, the amplifier may not be controlled remotely.

Programming Signals of Other Audio/Video Equipment with RM-P650

The RM-P650 can learn various functions of other remote commanders emitting infrared rays and allows you to control most of audio and video equipment from a distance.

Insert batteries before operation.

The two remote commanders must:

- be placed straight and head to head.
- be placed at a distance of approx. 5 cm (2 inches).
- not be moved during the programming operation.

Notes on programming

- Remote-control signals of equipment of manufacturers other than Sony can be programmed only when they are compatible with the infrared wireless remote control system. Since the programmable commander can "learn" only the signals output from another remote commander, it cannot control equipment that does not use a remote commander. Also, note that there are some special remote-control signals that cannot be programmed.
- Do not attempt to use the programmable commander with an air conditioner or other household appliances.

If the LEARN indicator flashes or does not go out in steps 2 – 4.

The memory capacity has become full. This occurs when other signals stronger than the remote-control signals have been stored because the signals were programmed in a noisy environment or the remote commanders were placed too far apart from each other.
→ Clear all the signals following the procedure on the right and program again from the beginning under the proper conditions.

To program a new signal onto a previously programmed button

Follow the programming procedure.
The previously programmed signal is cleared and replaced by the new signal.

To clear all programmed signals

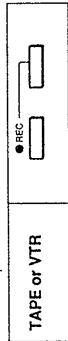

- Set the mode selector to LEARN.
- Press and hold any button of the programmable area until the LEARN indicator lights up.
- Press PROGRAM CLEAR until the LEARN indicator flashes and goes off.

Note

It is not possible to clear the programmed content of just one button.

To program a signal onto the ● REC button in the TAPE or VTR section

It is not possible to operate any equipment with only the REC button. To program a signal under the ● REC button, press and hold the following buttons at the same time in step 2.

Controlling Equipment

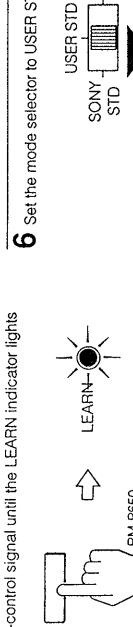

- Set the mode selector to LEARN.
- Press and hold the button which shall "learn" the remote-control signal until the LEARN indicator lights up.
- Press and hold the button of other manufacturer's remote commander whose signal is to be learned.

4 Remove your finger(s) from the button(s) after the LEARN indicator goes off.

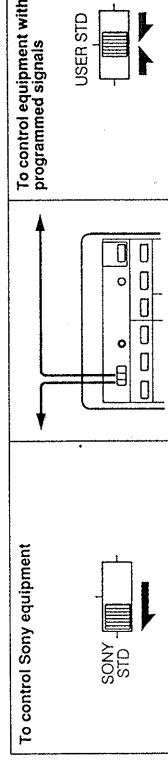

5 Repeat operation for each button to be programmed.

6 Set the mode selector to USER STD or SONY STD.

- After programming
Be sure to test if the equipment really works with the programmed signals.
- Number of signals that the commander can learn
It depends on the format of the signal. If you program signals of Sony equipment, approximately 40 – 50 signals can be programmed.

- By switching the mode selector as shown below, a single button alternately controls Sony equipment and another manufacturer equipment.

To control Sony equipment

To control equipment with programmed signals

If no signal has been programmed

The programmable commander can control Sony equipment even when the mode selector is set to USER STD.

Notes on Battery

When the LEARN indicator does not light when a button is pressed, the batteries are almost exhausted.

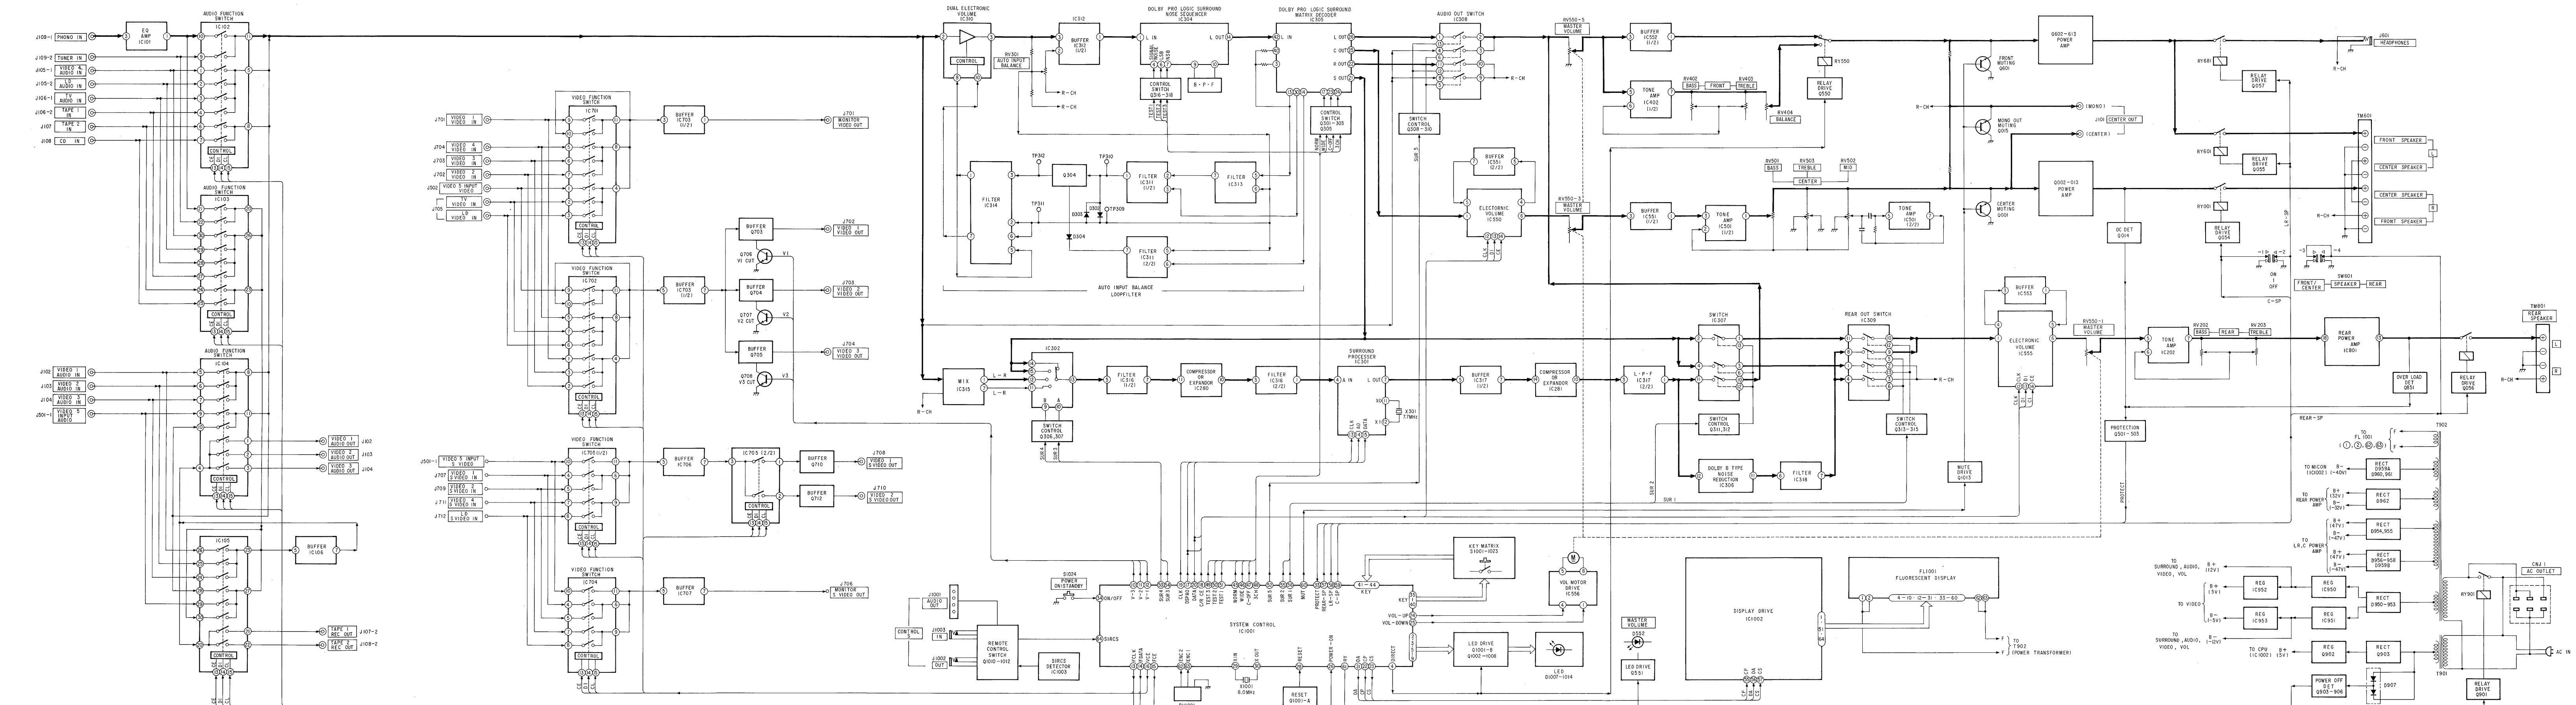

When the batteries are exhausted, the remote commander can no longer operate the unit or programming becomes impossible.

If this happens, replace both batteries with new ones. We recommend the use of alkaline batteries for prolonged use.

SECTION 3

BLOCK DIAGRAM

3-1. BLOCK DIAGRAM

3-2. EXPLANATION OF IC TERMINALS

• IC301 Surround Processor (YM7128)

Pin. No.	Terminal name	I/O	Terminal explanation
1	VDD	-	Digital system +5 V power source
2	AVDD	-	Analog system +5 V power source
3	CH	O	External condenser terminal for sample hold
4	AIN	I	Analog signal input terminal
5	CV	O	Standard voltage output terminal for A/D converter
6	<u>TI</u>	I	Test input terminal (always open)
7	LO	O	L-channel output (analog output) terminal
8	RO	O	R-channel output (analog output) terminal
9	AVSS	-	Analog system GND
10	VSS	-	Digital system GND
11	XO	O	Clock output
12	XI	I	Clock input (7.7 MHz)
13	SCI	I	Data shift clock input terminal
14	A0	I	Address/data identification signal input terminal "L" : Address term, "H" : Data term
15	DIN	I	Data input terminal
16	<u>IC</u>	I	Initial clear terminal

• IC1002 Display Microcomputer (MSC7128)

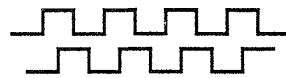

Receives display data from the system controller and displays it on the fluorescent tube.

Pin. No.	Terminal name	I/O	Terminal explanation
1~51	COM2~6	O	Fluorescent tube display drive output
52, 53	SEG1~36 +5V	-	Power source terminal (+5 V)
54	<u>RESET</u>	I	Reset input
55	CP	I	Data transmission clock input from system controller (IC1001)
56	DA	I	Serial data input from system controller (IC1001)
57	CS	I	Data latch input from system controller (IC1001)
58	OSC O	O	CR external terminal for clock oscillator
59	OSC I	I	
60	TEST	-	Not use with this machine. (Always GND)
61	TEST	-	
62	Vss	-	GND
63	VEE	-	Power source terminal of driver circuit (-40 V)
64	COM1	O	Fluorescent tube display drive output

• IC1001 System Controller (M50747)

This controller controls the whole system, such as the control data transmission for DSP, switching the surround mode, data transmission for the display microcomputer (IC1002) to display it on the fluorescent lamp, switching the function switch, VOL control, ON/OFF of LED relay, and key input.

Pin. No.	Terminal name	I/O	Terminal explanation
1	VDD	—	Power source terminal (+5 V)
2	MUT	O	MUTE LED (D1014) output. "H" : light on
3	RECOUT	O	REC OUT LED (D1013) output. "H" : light on
4	DIRECT	O	SOURCE DIRECT LED (D1012), Relay (RY550) output. "H" : light on, Relay ON
5	STADIUM	O	STADIUM LED (D1011) output. "H" : light on
6	JAZZ	O	JAZZ CLUB LED (D1010) output. "H" : light on
7	HALL	O	HALL LED (D1009) output. "H" : light on
8	THEATER	O	THEATER LED (D1008) output. "H" : light on
9	DOLBY	O	DOLBY LED (D1007) output. "H" : light on
10	V3	O	Loop cut control terminal for Video 3 image output. Active : "L"
11	V2	O	Loop cut control terminal for Video 2 image output. Active : "L"
12	V1	O	Loop cut control terminal for Video 1 image output. Active : "L"
13	FCLK	O	Data transmission clock output for audio/video function switch
14	FDATA	O	Serial data output for audio/video function switch
15	FCE	O	Data latch output for audio function switch (IC102~105)
16	VCE	O	Data latch output for video function switch (IC701, 702, 704, and 705)
17	DSPA 0	O	Data latch output for surround processor (IC801)
18	C/R-CE	O	Data latch output for election VOL (IC550 and 555)
19	CLK	O	Data transmission clock output for election VOL (IC550 and 555) and surround processor.
20	DATA	O	Serial data output for election VOL (IC550 and 555) and surround processor.
21	DA	O	Serial data output for display microcomputer (IC1002)
22	CP	O	Data transmission clock output for display microcomputer (IC1002)
23	CS	O	Data latch output for display microcomputer (IC1002)
24	VOL-UP	O	Volume motor (RV550) UP output for IC556 (motor drive)
25	VOL-DOWN	O	Volume motor (RV550) DOWN output for IC556 (motor drive)
26	POWER-ON	I	Power source breakage detection input. Active : L
27	Vss	—	Power source terminal (GND)
28	RES	I	Reset input
29	XIN	I	Clock input (8.0 MHz)
30	XOUT	O	Clock output
31	CLK	—	Not used with this machine.
32	Vss	—	Power source terminal (GND)
33	PROTECT	I	Protection detection input of speaker output
34	ON/OFF	I	POWER switch (S1024) input
35	KEY OUT	O	Key matrix output

SECTION 4

ELECTRICAL ADJUSTMENTS

- Service mode display with fluorescent lamp

When depressing the **DISPLAY MODE** button while pressing the **TEST TONE** button, the following three patterns are repeatedly displayed :

1. Diced pattern
 2. Diced pattern (in reverse of pattern 1)
 3. Everything lights

(However, since 10G in the center position is not used and connected, it does not light.)

[Idling adjustment]

Note :

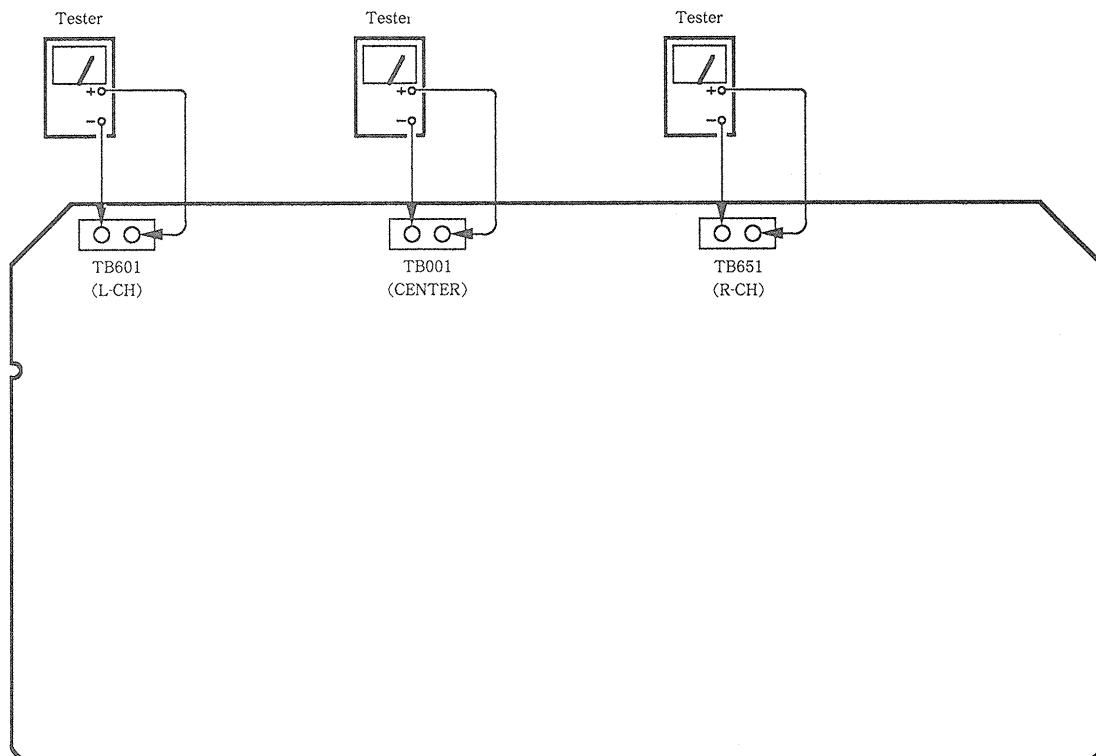

Perform the adjustment procedures after the power switch has been turned ON and having waited for a few minutes.

Adjusting method:

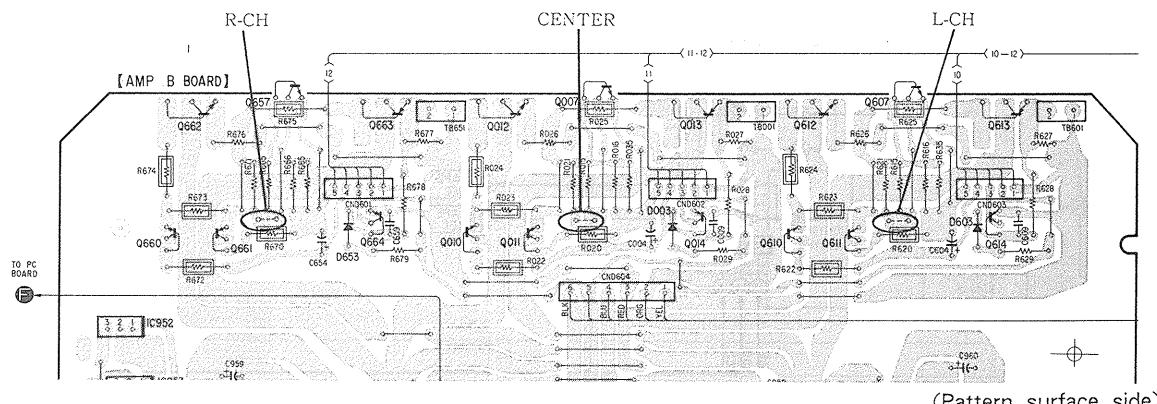

1. Set the master volume to MIN.
 2. Connect a tester to the test points of TB001 (Center), TB601 (L-CH) and TB651 (R-CH) and confirm that the reading of the tester become within the following values.
 3. If the readings of the tester are bigger than the specified values, solder the taps of R201 (CENTER), R621 (L-CH) and R671 (R-CH).

Specified value : 0.5~10.0mV

Adjusting point : AMP B circuit board

(Part surface side)

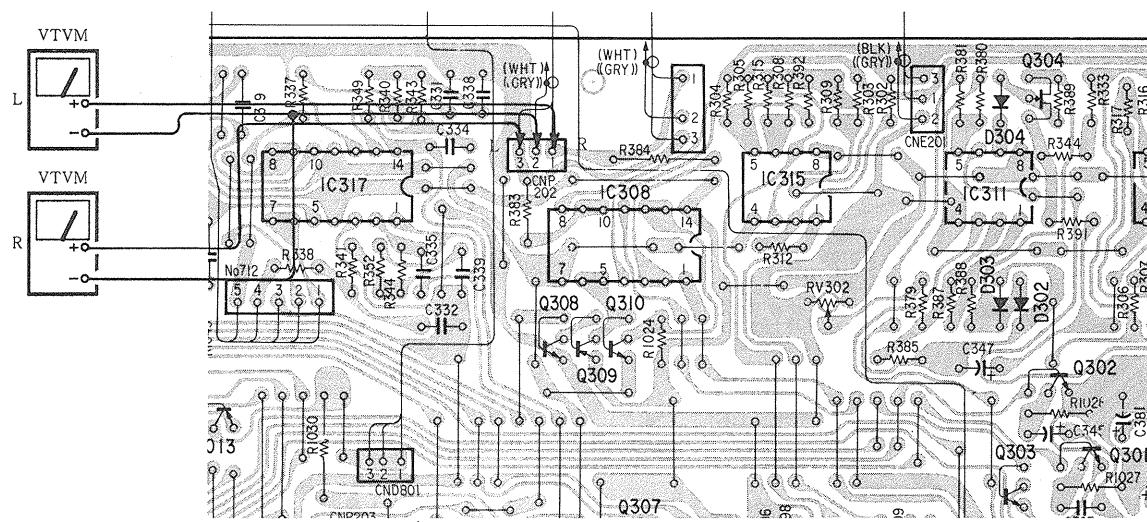

(Pattern surface side)

【AUTO INPUT BALANCE adjustment】

Condition :

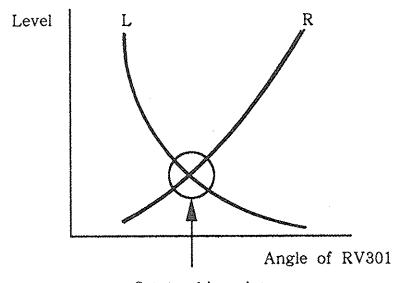

PRO LOGIC MODE : CENTER OFF

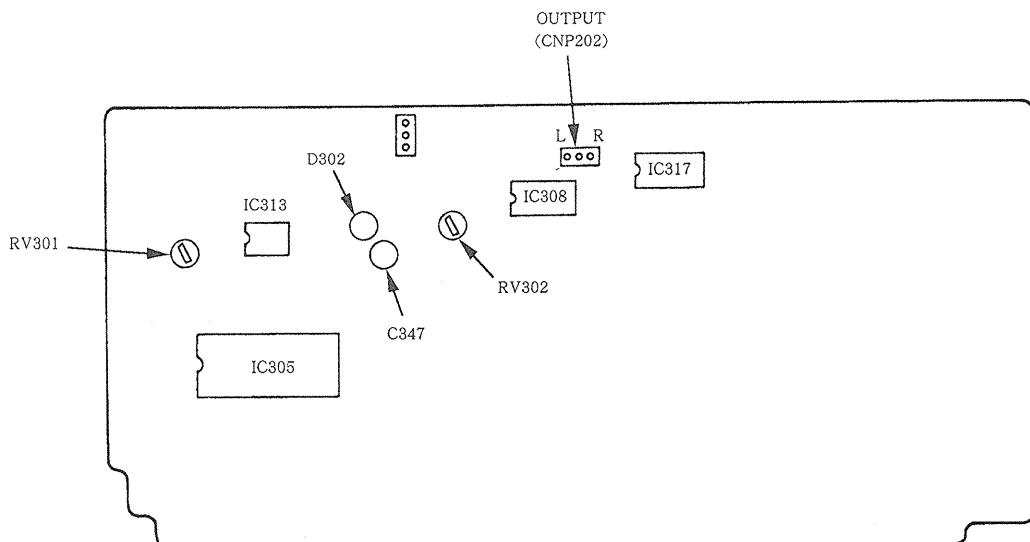

SUR board (Pattern surface)

Adjusting method :

1. Set the function to CD and apply $f=1\text{kHz}$ and approximately 200 mV to both the L and R inputs from the CD input on the back panel.
2. Short circuit C347. (AUTO INPUT BALANCE LOOP CUT)
3. Adjust RV301 so that the VTVM readings of L and R become minimum.
4. Adjust RV302 so that the reading of the tester becomes $0\pm 5\text{mV}$.
5. Short circuit C347 and confirm that the indications of each meter does not change.

Adjusting point :

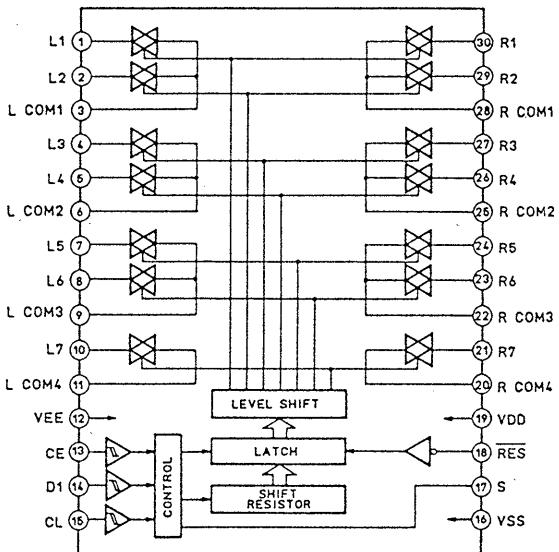

SUR board (Part surface)

SECTION 7

ELECTRICAL PARTS LIST

AC

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
 - -XX, -X mean standardized parts, so they may have some difference from the original one.
 - **RESISTORS**
All resistors are in ohms
METAL : Metal-film resistor
METAL OXIDE : Metal Oxide-film resistor
F : nonflammable

- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
 - SEMICONDUCTORS
In each case, u : μ , for example:
 $uA....: \mu A....$, $uPA....: \mu PA....$
 $uPB....: \mu PB....$, $uPC....: \mu PC....$
 $uPD....: \mu PD....$
 - CAPACITORS
 $uF: \mu F$
 - COILS
 $uH: \mu H$

The components identified by mark  or dotted line with mark  are critical for safety.
Replace only with part number specified.

When indicating parts by reference number, please include the board name.

- AV-650 : US model
AV-650G : E model

SONY®
SERVICE MANUAL

US Model

TA-AV650

E Model

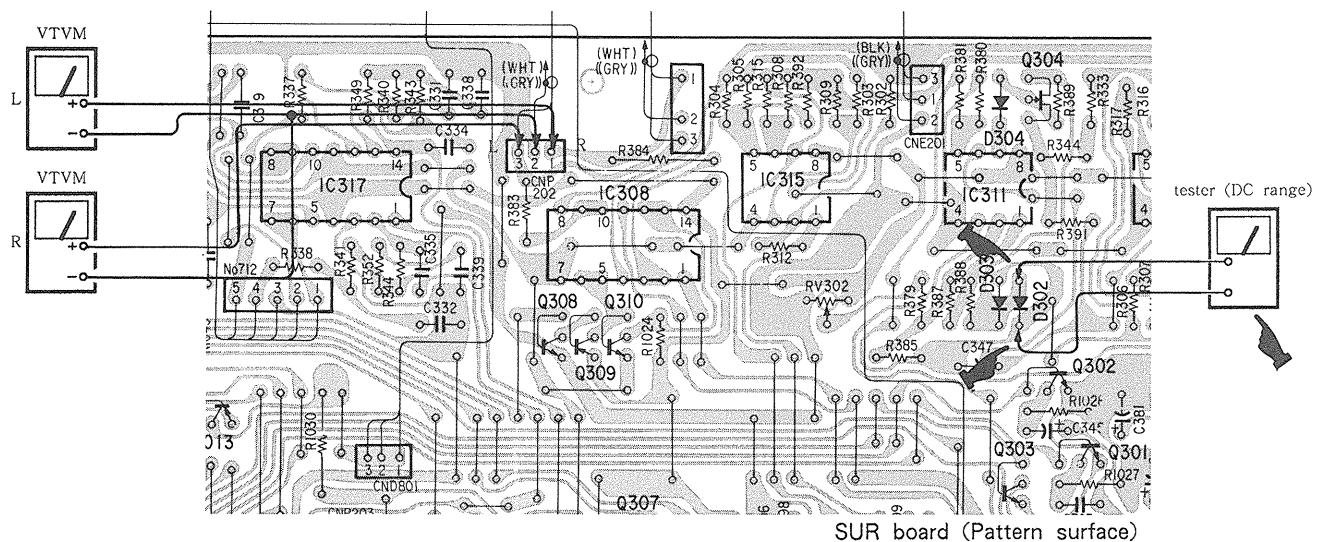

TA-AV650G

CORRECTION-1

Correct your service manual as shown below.

- The connecting destinations of the tester have been omitted in the AUTO INPUT BALANCE adjustment on page 25 of the service guide. Connect and adjust a tester to both ends of D302 (or D303) as shown in the diagram below.

☞ : Corrected portions

- This is the FL001 internal wiring diagram that was omitted in the service manual.

FL001
