STEREO TAPE DECK

SPECIFICATIONS

GENERAL

Power Requirements: 120V ac, 60 Hz (US, Canadian model)
110V, 120V, 220V, 240V ac, 50/60 Hz (UK, AEP, PX model)

Power Consumption: 110W (US, Canadian model)
90W (UK, AEP model)
80W (PX model)

AC Outlet: 300W, unswitched (US, Canadian model)

Dimensions: Approx. 445 (w) x 525 (h) x 235 (d) mm
17 1/2 (w) x 20 5/8 (h) x 9 1/4 (d) inches
including projecting parts and controls

Weight: 26.5 kg, 58 lb 7 oz (US, Canadian model)
27 kg, 58 lb 8 oz (UK, AEP, PX model)

Track: 4-track 2-channel stereo recording and playback

Tape Speed: 19 cm/s (7½ ips)
9.5 cm/s (3¾ ips)

Fast Forward and Rewind Time: Approx. 150 seconds with 740 m (2,400 ft) tape

Recording Time: With 1,100 m (3,600 ft), 27 cm reel
Stereo recording
180 minutes at 19 cm/s
Mono recording
720 minutes at 9.5 cm/s

Heads: Record head 1, Playback head 1
Erase head 1

Motors: AC servo-controlled capstan motor 1
Induction reel motor 2

Reel: Up to 27 cm (10½-inch)

– Continued on page 2 –

SONY

SERVICE MANUAL

Frequency Response: With Sony Ferri-Chrome tape
30—25,000 Hz ± 3 dB at 19 cm/s
30—18,000 Hz ± 3 dB at 9.5 cm/s
With SLH tape
30—25,000 Hz ± 3 dB at 19 cm/s
30—18,000 Hz ± 3 dB at 9.5 cm/s
With regular tape
30—18,000 Hz ± 3 dB at 19 cm/s
30—15,000 Hz ± 3 dB at 9.5 cm/s

Wow and Flutter: NAB
0.04% WRMS at 19 cm/s
0.08% WRMS at 9.5 cm/s
DIN
±0.07% at 19 cm/s
±0.15% at 9.5 cm/s

S/N Ratio: 61 dB (NAB) with Sony Ferri-Chrome Tape
61 dB (DIN 1975 rev.) with Sony Ferri-Chrome Tape
56 dB (DIN, old)

Total Harmonic Distortion: 0.7%

Bias Frequency: 160 kHz

Equalization: 3,180 μS + 50 μS (19 cm/s)
3,180 μS + 90 μS (9.5 cm/s)

Inputs: MIC (two phone jacks)
Sensitivity: 0.2 mV (-72 dB)
Impedance: for low-impedance microphone
LINE IN (two phono jacks)
Sensitivity: 0.06 V (-22 dB)
Impedance: 100 kΩ
REC/PB (connector) (UK, AEP, PX model)
Input impedance: less than 10 kΩ

Outputs: LINE OUT (two phono jacks)
Normal level: 0.435 V (-5 dB) with PB LEVEL control set to center detent position
0.775 V (0 dB) with PB LEVEL control set to "10"
Load impedance: 100 kΩ
Suitable load impedance: more than 10 kΩ
HEADPHONES (binaural jack)
Load impedance: for low-impedance headphones
REC/PB (connector) (UK, AEP, PX model)
Output impedance: less than 10 kΩ

Other Jack: 11-pin remote control connector

0 dB = 0.775 V

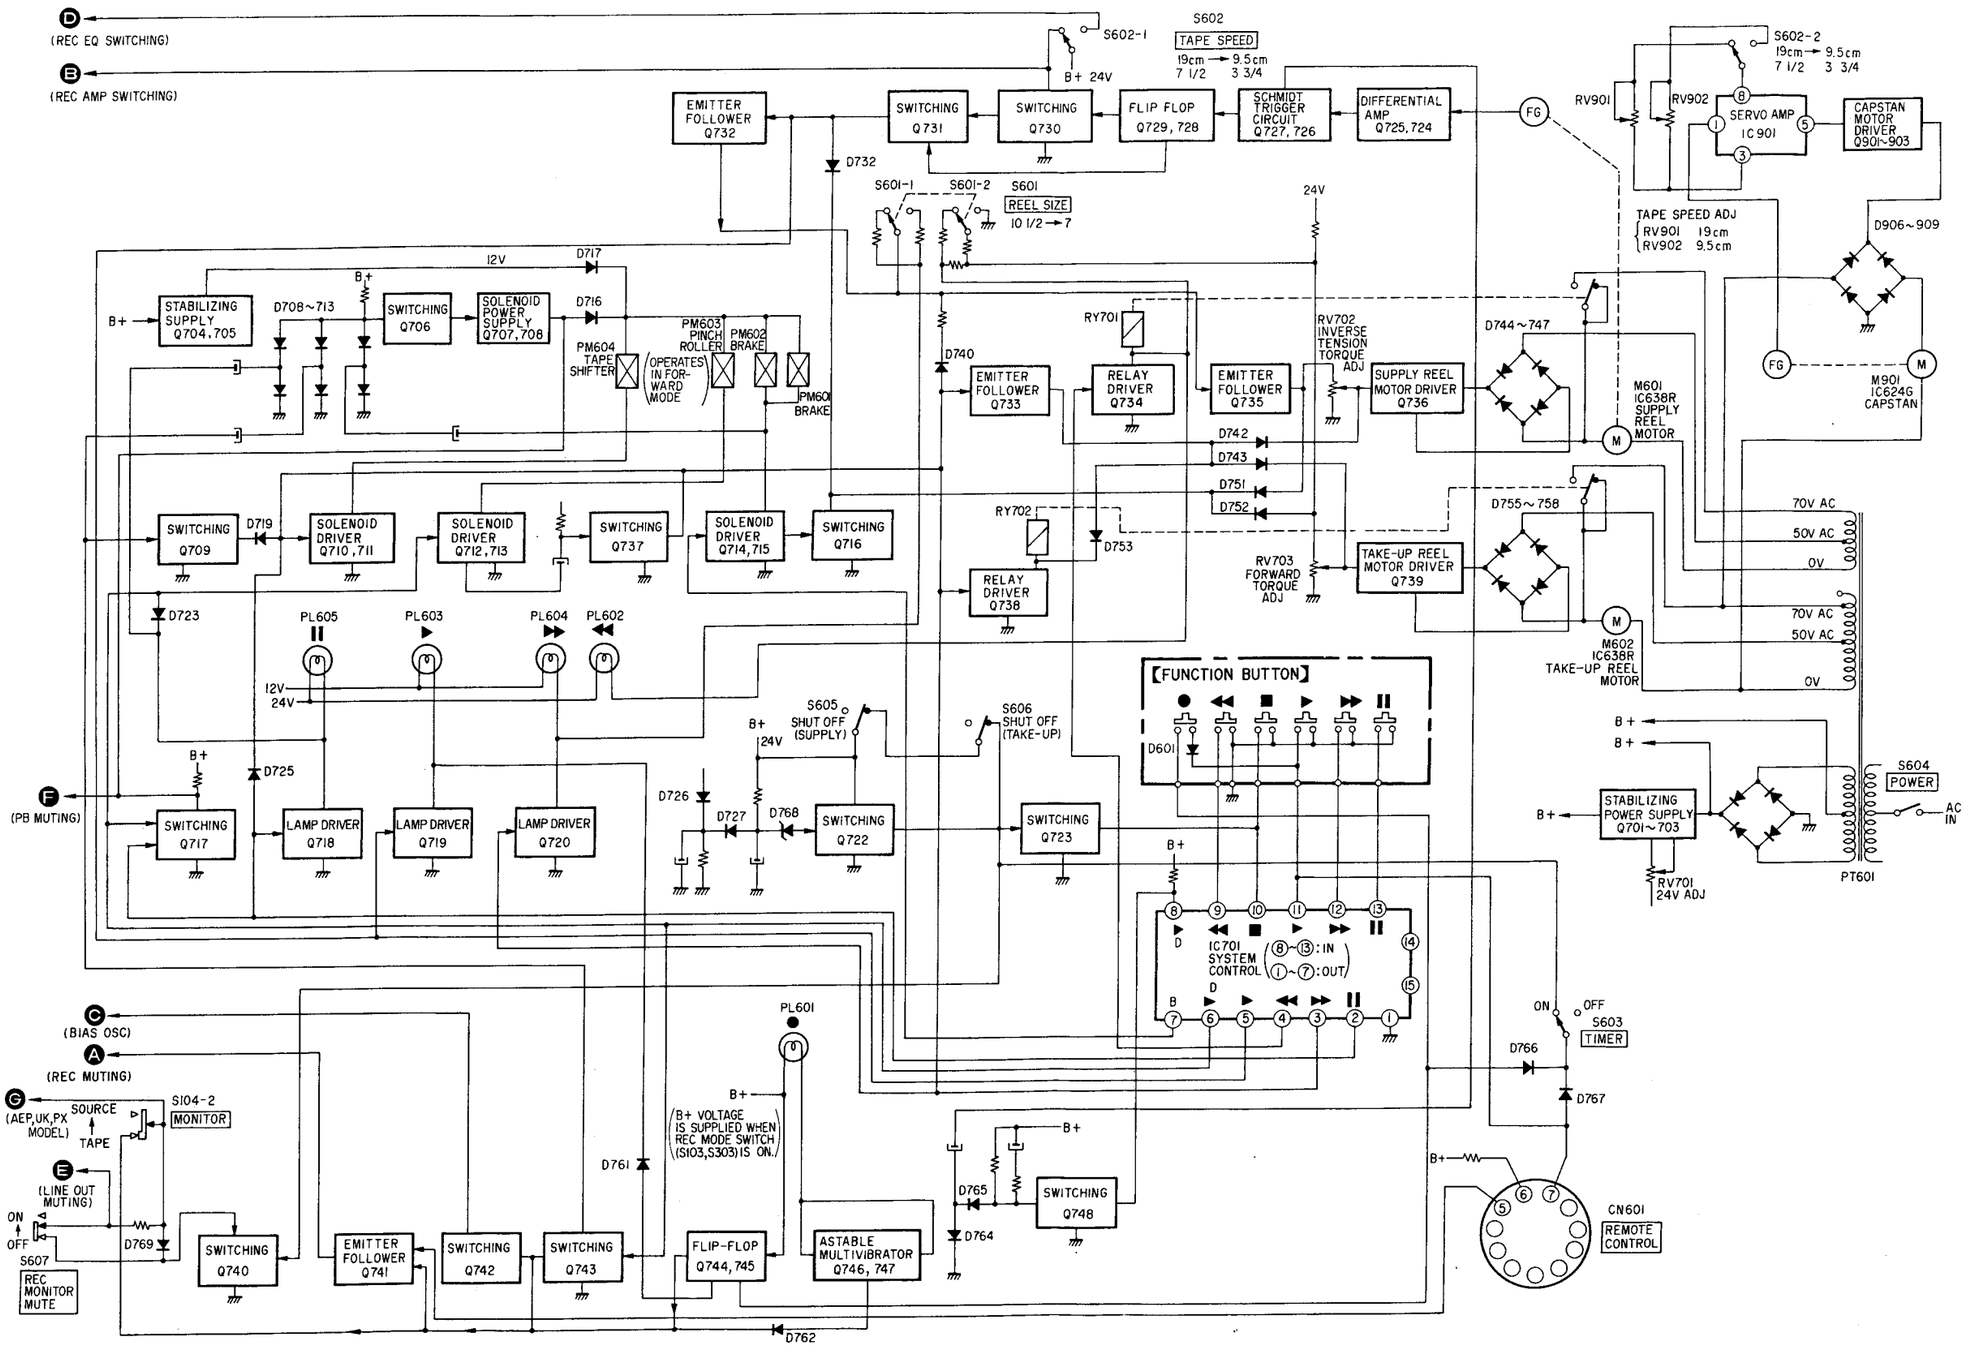
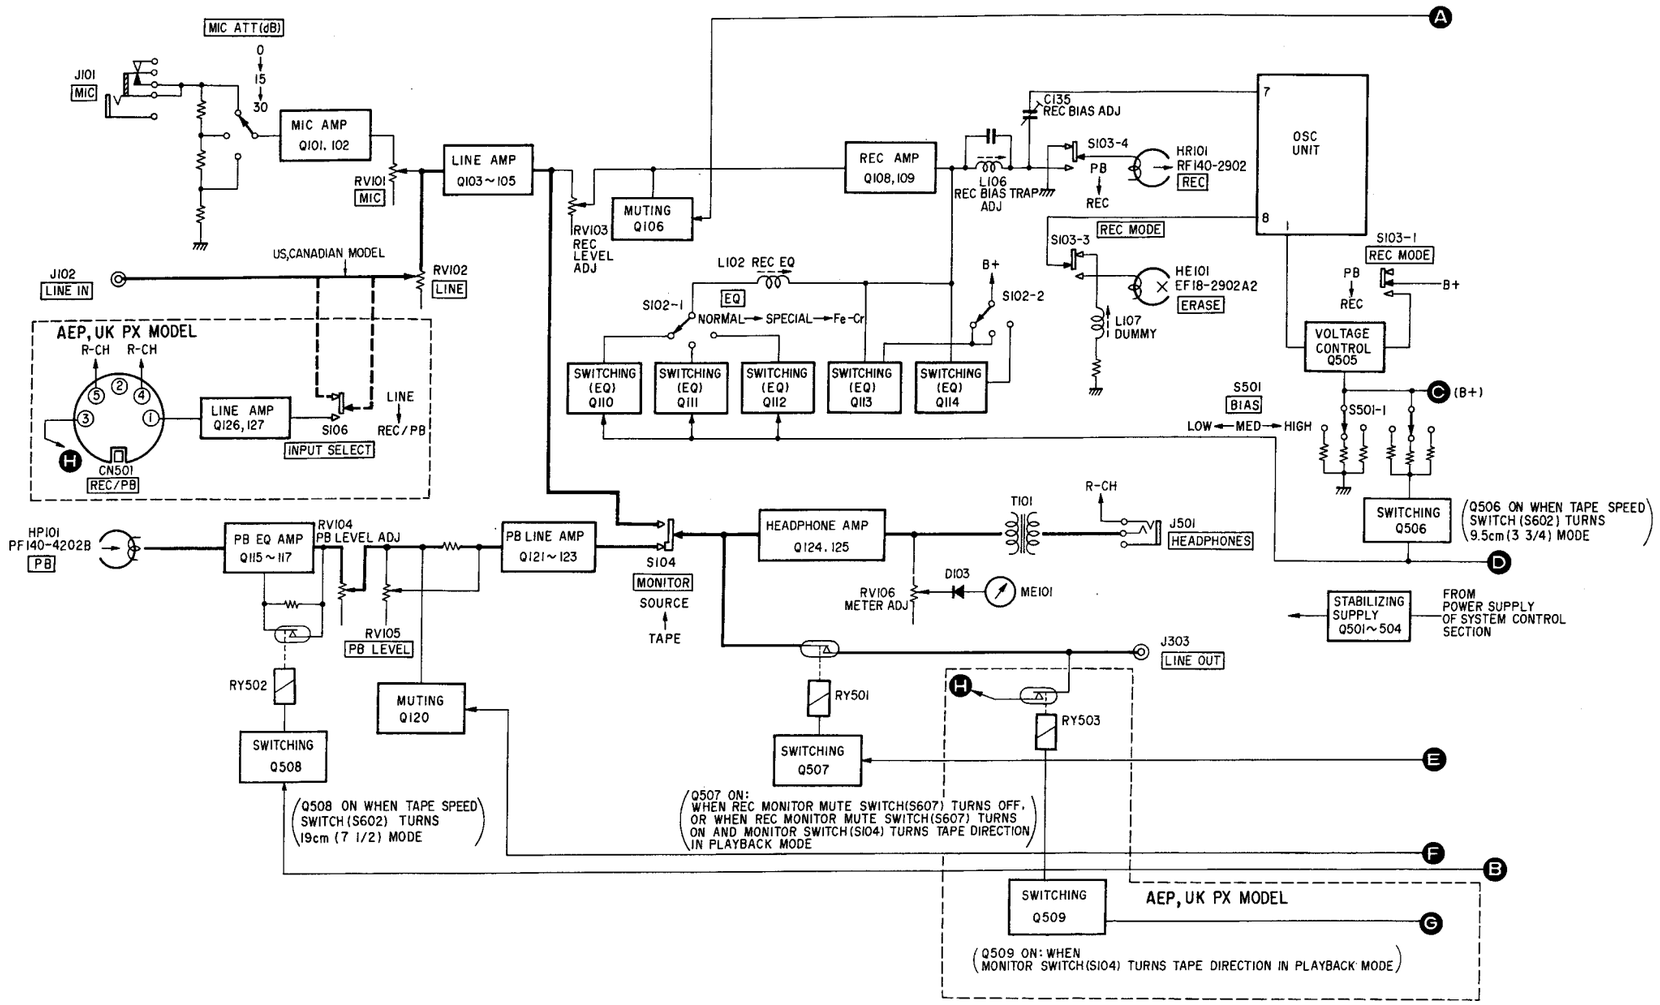
SECTION 1
OUTLINE

1-1. BLOCK DIAGRAM — System Control Section —



1-2. BLOCK DIAGRAM — Amplifier Section —



1-3. NOTE ON REPAIRING

NOTE ON REPAIRING

1. This set does not change playback level when TAPE SELECT switches are changed.
2. The LINE OUT signal is cut when REC MONITOR MUTE switch (S607) on the rear panel is turned ON except when MONITOR switch is in TAPE position in playback mode.
3. If TIMER switch is previously set to ON position, it may happen to erase test tapes because the set becomes automatically in the auto playback (awakening) or auto record mode determined by REC MODE switch position when POWER switch is turned ON.
4. PB LEVEL controls on the front panel control LINE OUT and HEADPHONES levels, and also VU meters indicate the amount of PB LEVEL controlling. When PB LEVEL is in the center-click positions, LINE OUT levels are standard 0.44V (-5 dB) and VU meters indicate "0". When PB LEVEL controls are in their full-clockwise stops, LINE OUT levels are 0.775V (0 dB).
5. Three kinds of hexagonal-socket screwdrivers are needed for the following adjustment/removal.

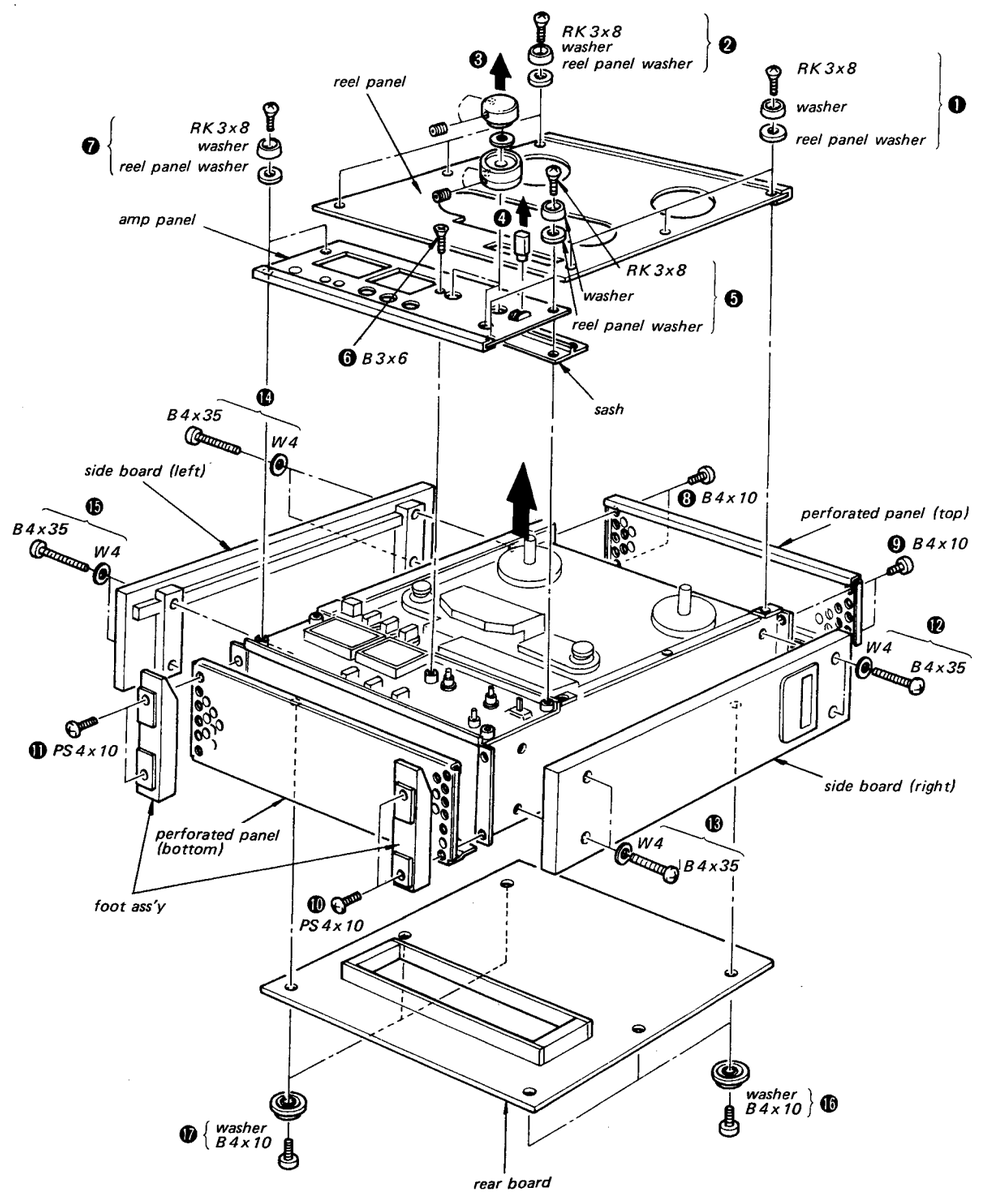
Screwdriver	Adjustment/removal
⬡ 1.27 mm	Tension-arm pin Intermediate pin Switch knob Switch lever
⬡ 1.5 mm	Head azimuth FG-holding boss Control knob Motor pulley
⬡ 2.0 mm	Reel drum

6. Tape BIAS/EQ recommendations
The following list shows the recommended settings, which have been determined through critical listening tests and electrical characteristic measurements on commercially available tapes. The setting can be changed according to the personal preference. For Sony tapes, be sure to use the recommended settings to obtain the optimum tape characteristics.

BIAS \ EQ	NORMAL	SPECIAL	Fe-Cr
LOW	SONY PR	BASF LH, LHS AGFA PE, PEM MEMOREX	SCOTCH #211, #212, #213 AMPEX 406, 407
MED	SCOTCH #218	SONY SLH SCOTCH CLASSIC TDK AUDUA	SONY DUAD SCOTCH #206, #207 MAXELL UD
HIGH			SCOTCH #250

SECTION 2
DISASSEMBLY

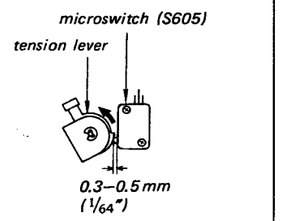
Reel Panel Removal:	❶, ❷	(to Mechanical Adjustment)
Amp Panel Removal:	❸, ❹, ❺, ❻, ❼	(to VU Meter and Variable Resistor Replacement)
Perforated Panel (top) Removal:	❽, ❾	(to Fuse Replacement)
Perforated Panel (bottom) Removal:	❿, ⓫	(to Audio Amp Board Check)
Side Board (right) Removal:	⓬, ⓭	(to Tape Speed and Forward Torque Adjustments)
Side Board (left) Removal:	⓮, ⓯	(to B+ and Supply Reel Back Tension Adjustments)
Rear Board Removal:	⓰, ⓱	(to System Control Board Checking)

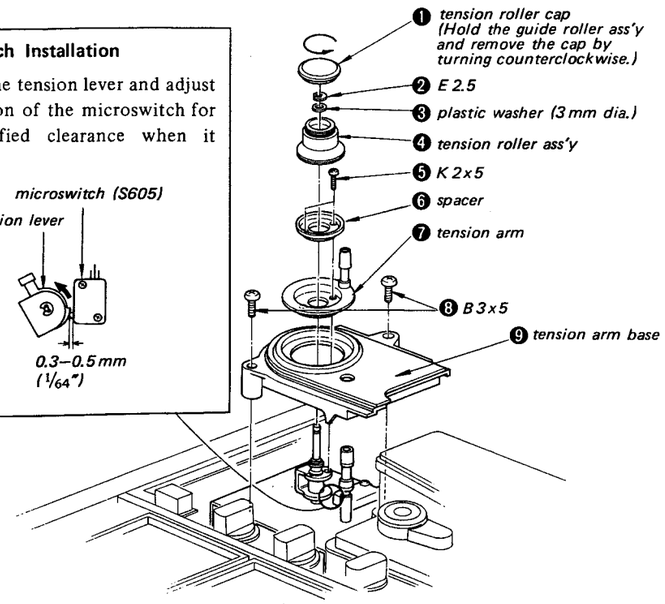


TENSION ARM BASE REMOVAL

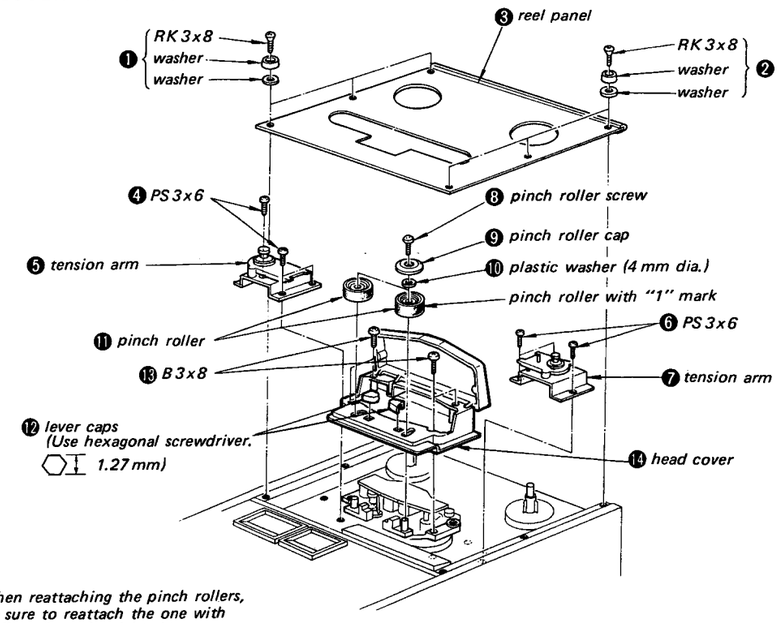
Microswitch Installation

Turn the tension lever and adjust the position of the microswitch for the specified clearance when it switches.



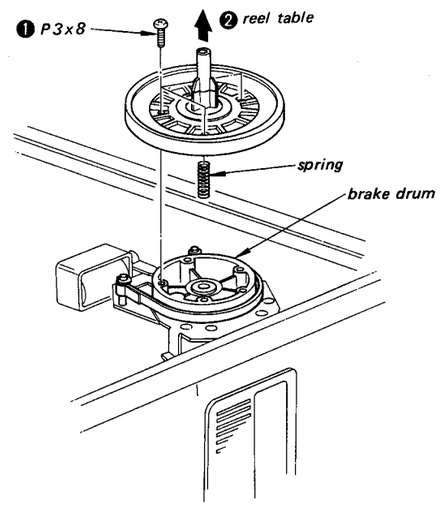


HEAD COVER REMOVAL



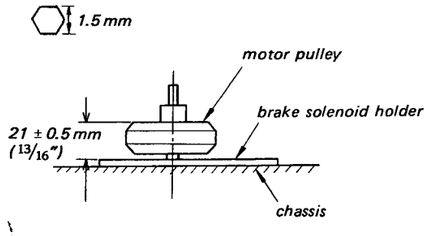
Note: *When reattaching the pinch rollers, be sure to reattach the one with "1" mark at the right side.*

REEL TABLE REMOVAL

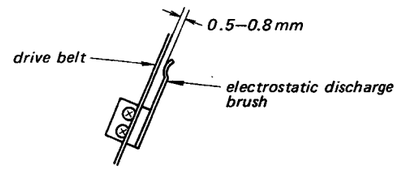


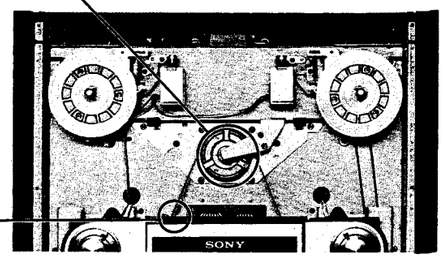
MOTOR PULLEY INSTALLATION

Use a hexagonal screwdriver.



ELECTROSTATIC DISCHARGE BRUSH INSTALLATION



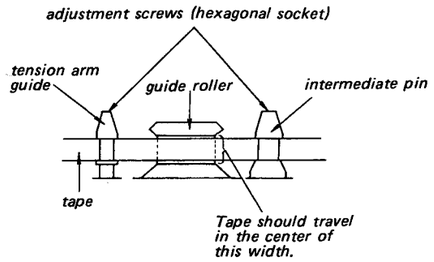


SECTION 3
MECHANICAL ADJUSTMENT

3-1. MECHANICAL ADJUSTMENTS

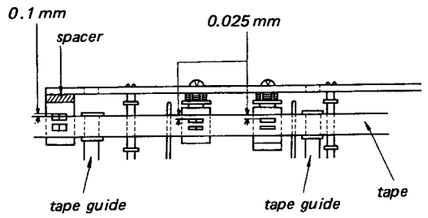
Tape Path Adjustment

1. In playback mode, travel a blank tape SLH-S1, and adjust the positions of the tension-arm guide and intermediate pin.

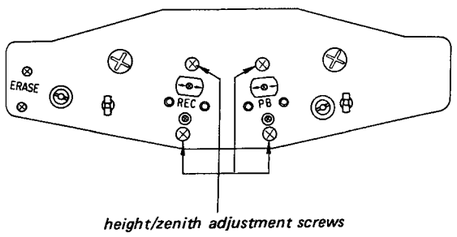


After the adjustment, tighten the adjustment screws.

2. Travel a blank tape SLH7-740 and adjust the position of the tape guides to eliminate tape curls.



3. Travel a blank tape SLH-S1 and adjust the height of each head for the specified clearances. To adjust the erase head height, select appropriate spacer.
To adjust the record and playback heads, turn the height/zenith adjustment screws in the same angle and direction.

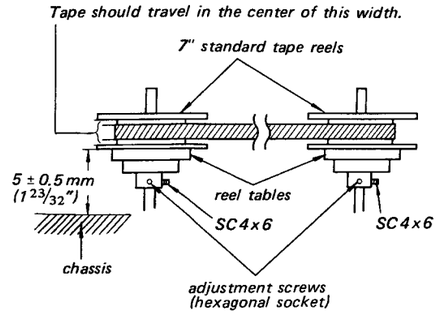


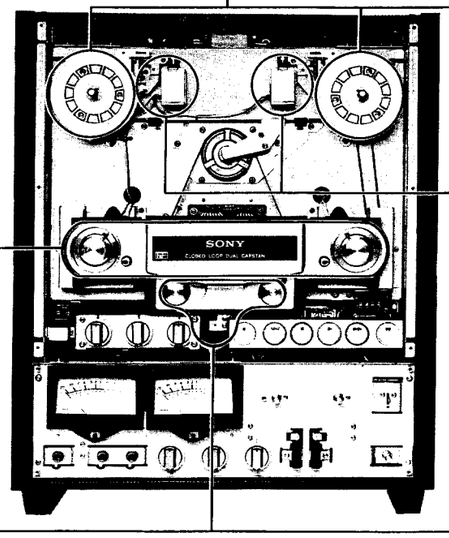
After the adjustment, apply a suitable locking compound to the adjusted screws.

Reel Table Height Adjustment

– playback and rewind modes –

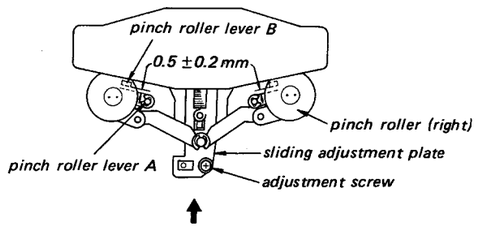
1. Loosen the adjustment screws and adjust the height of the reel tables for the specified height.
2. If the tape touches the reel in playback, fast forward and rewind modes, recheck the tension arms, standard reels and the tape.



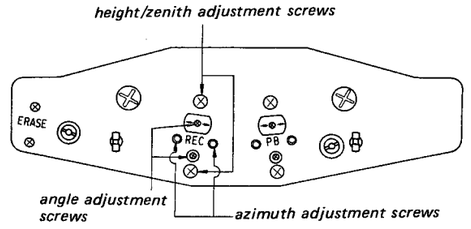


Pinch Roller Lever Position Adjustment

1. Remove the head cover.
2. Reattach both the pinch rollers.
3. Place the set in the playback mode. Check that the solenoid is in on condition (energized).
4. Loosen the adjustment screw and push the slide adjustment plate in the arrowed direction for the specified clearance between the pinch roller levers A and B, and tighten the adjustment screw.
5. After the adjustment, apply a suitable locking compound to the adjustment screw.



Note: *Adjustment screw positions for the 2T PB and 4T PB heads are the same as the 2T REC head.*
Azimuth adjustment screws are so constructed to react each other. Take care in adjusting azimuth adjustment screw.



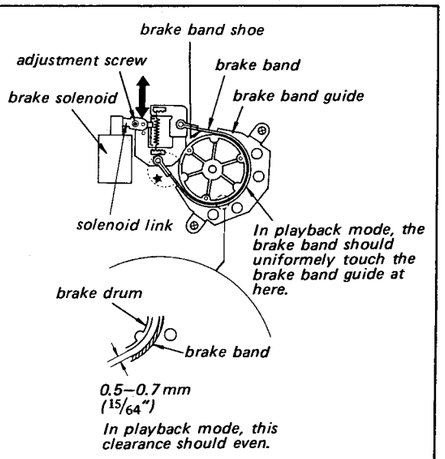
Brake Adjustment (1)

Adjust both the supply- and take-up-side brakes.

1. In stop mode, 0.5–0.7 mm clearance should exist between the brake-band guide and brake band.
2. In playback mode (the brake solenoid should be in ON condition), loosen the adjustment screw and adjust the position of the solenoid link in the arrowed direction so that the brake band and brake-band guide uniformely touch.

Note: If the brake-release stroke is long, the brake band may bend at the position shown with ★. Be sure not to bend the brake band.

3. After the adjustment, apply a suitable locking compound to the adjustment screw.

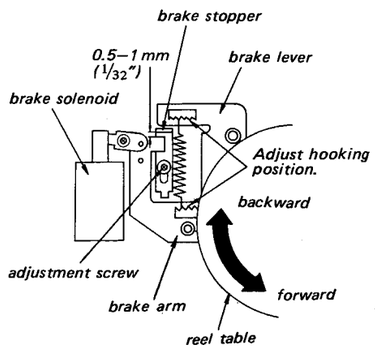


Brake Adjustment (2) and Brake Torque Adjustment

Adjust both the supply- and take-up-side brakes.

1. In stop mode, loosen the adjustment screw and adjust the position of the brake stopper for the specified clearance between the brake stopper and brake lever.
2. After the adjustment, tighten the adjustment screw and apply a suitable locking compound to the screw.
3. Measure both the forward and backward brake torques. Adjust spring-hook position for the specified torques.

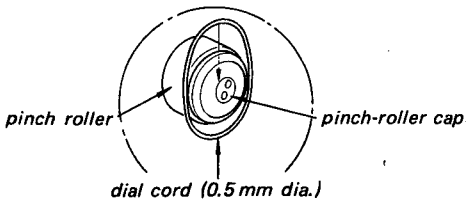
backward torque:	1,800–2,500 g·cm (25–34 oz·inch)
forward torque:	600–700 g·cm (8.5–9.5 oz·inch)



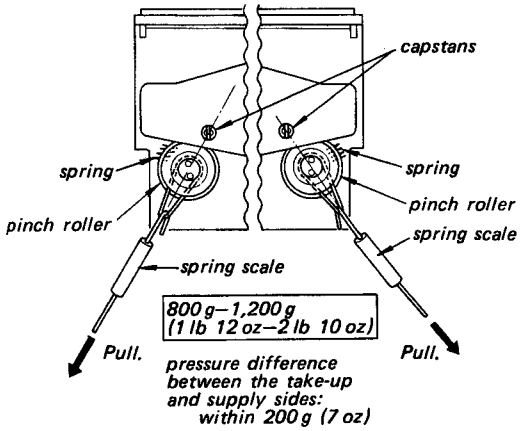
Pinch Roller Pressure Check

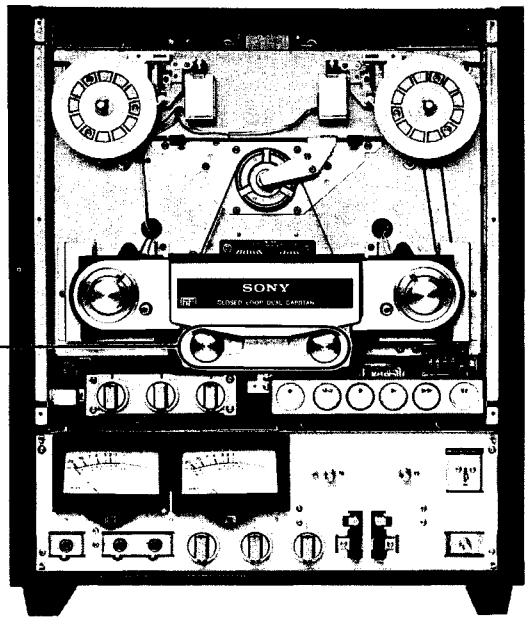
– playback mode –

1. Place the dial-cord ring between the pinch roller and pinch-roller cap.



2. In playback mode, pull the spring scale on the center line made by the centers of the capstan and pinch roller.
3. Slowly return the pinch roller and read the spring scale just when the pinch roller starts to rotate.

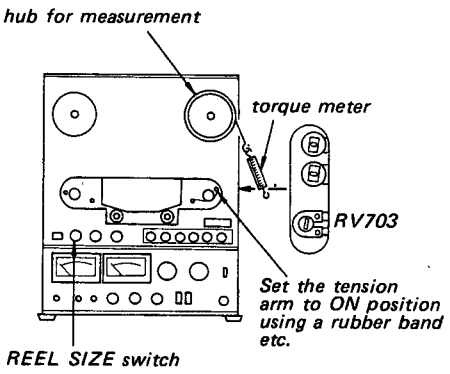




Forward Torque Adjustment

1. Remove the side board (right).
2. Apply the rated ac voltage to the AC IN.
3. Set the TAPE SPEED switch to 19 cm/s and REEL SIZE switch to 10½.
4. In playback mode, adjust RV703 for the specified torques.
5. Set REEL SIZE switch to 7 and check torques.

	REEL SIZE switch	
	10½	7
50 Hz	520–580 g·cm (7.3–8.0 oz·inch)	260–320 g·cm (3.6–4.4 oz·inch)
60 Hz	380–440 g·cm (5.3–6.1 oz·inch)	180–240 g·cm (2.5–3.3 oz·inch)



Supply Reel Back Tension Adjustment

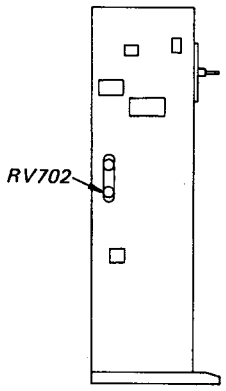
Note: This adjustment requires a ultra-low frequency audio signal generator. If the signal generator is not available, do not attempt this adjustment.

1. Remove the side board (left).
2. Apply the rated ac voltage to AC IN.
3. Set RV702 to the fully-counterclockwise stop.
4. Put a torque meter on the supply reel tape.
5. Unsolder the RED and WHT lead wires from the FG at the system control board.
6. Set the signal generator's frequency to 20.2 Hz and attenuator to -20 dB.
7. Connect the signal generator to the points from where the two lead wires are unsoldered in step 5.
8. Set REEL SIZE switch to 10½ and TAPE SPEED switch to 19 cm.
9. In playback mode, adjust RV702 for specified torque.

	Back tension torque
50 Hz	*150 g·cm (2.1 oz·inch)*
60 Hz	*120 g·cm (1.65 oz·inch)*

10. Change the audio signal generator's frequency to 7.14 Hz and check the torque meter reeding.

	Torque meter reeding
50 Hz	*280–340 g·cm (3.9–4.7 oz·inch)*
60 Hz	*220–280 g·cm (3.1–3.8 oz·inch)*



Fast Forward and Rewind Back Tesnion Check

1. Apply the rated ac voltage to AC IN.
2. Turn either the left- or right-side tension arm on using a rubber band.
3. Put a torque meter on the supply reel table. In fast forward mode, pull the torque meter in the arrowed direction at a speed of 19–9.5 cm/s and read the fast forward back tension on the torque meter.
4. Put a torque meter on the take-up reel table. In rewind mode, pull the torque meter and read the rewind back tension as in step 3.

	REEL SIZE switch	
	10½	*7*
50 Hz	*110–150 g·cm (1.6–2.0 oz·inch)*	*80–120 g·cm (1.15–1.6 oz·inch)*
60 Hz	*70–110 g·cm (1.0–1.5 oz·inch)*	*50–90 g·cm (0.7–1.2 oz·inch)*

3-2. SYSTEM CONTROL CHECK

System Control Check

Setting:

REEL SIZE switch:	10½
TAPE SPEED switch:	19 cm
TIMER switch:	OFF
MONITOR switch:	TAPE
PB LEVEL control:	center click
REC MONITOR MUTE switch:	OFF
INPUT SELECT switch: (AEP, UK, PX model)	LINE
REC MODE switches:	released positions

Put the 10½-inch blank tapes on the set.

Checking:

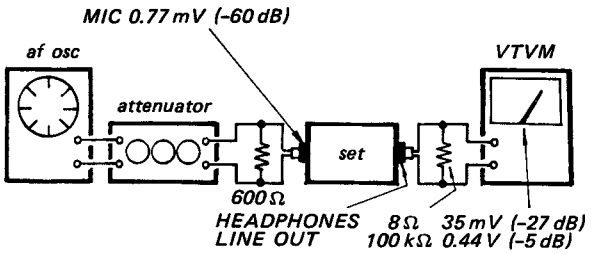
1. Turn POWER switch ON. The VU meter lamps should light up.
2. Depress REC MODE switches. The L-side lamp should light up when the L-side REC MODE switch is depressed, and the R-side lamp should light up when the R-side REC MODE switch is depressed. And the record button lamp should put on and off repeatedly.
3. Depress the pause button. The pause button lamp should light up.
4. Depress the record and forward buttons simultaneously. The record button lamp should turn from flickering to ON. At the same time, the forward button lamp should light up.
5. Press the pause button. The pause button lamp should turn off and the pinch roller should press the capstan and become in forward record mode.
6. Depress the fast forward button. The set should become in the fast forward mode. In this mode, the record button lamp flickers, forward button lamp turns off and the fast forward button lamp turns on.
7. Depress the rewind button. The set should become in the rewind mode. In this mode, the fast forward button lamp should turn off and rewind button lamp turns on.
8. Depress the forward button. The rewind button lamp should turn off and forward button lamp turns on. The tape should once completely stop traveling, and then become in the forward mode.
9. The set should become in the stop mode only when both the tension arm microswitches turn off. The set should not become in the stop mode when one of the tension arm microswitches turns off.
10. Turn TIMER switch ON. Turn POWER switch OFF once, and two to three second later turn POWER switch ON. Now the set should become in the forward record mode automatically.
11. With REC MODE switches released (i.e., in the playback positions), perform the same procedure as shown in step 10. The set should become in forward mode automatically.
12. Place the set in the forward record and simultaneous monitoring mode. Turn REC MONITOR MUTE switch on the rear panel ON. Now the signal should not come out from LINE OUT jacks.
    Rewind the recorded portion of the tape and place the set in the forward mode. Now the signal should come out from LINE OUT jacks.
    Turn REC MONITOR MUTE switch OFF.
13. Depress the forward and pause buttons. Move the recorded portion of the tape back and forth. Sound signal should come out from LINE OUT jacks.

3-3. ELECTRICAL ADJUSTMENTS

Note: The adjustments should be performed in the order given in this service manual. The adjustments should be performed for both L-CH and R-CH.

Standard Record:

Set the REC LEVEL control for the specified output level.



Control and Switch Settings:

Unless otherwise specified, set the controls and switches as follows.

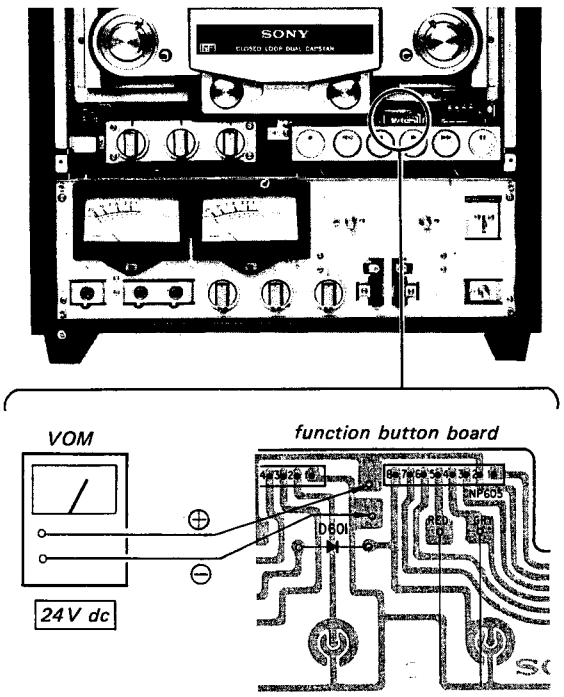
Controls	In playback	In record
MIC REC VOL		The position to produce the rated LINE OUT level with rated MIC input level.
LINE REC VOL		The position to produce the rated LINE OUT level with rated LINE IN level.
PB VOL	center click	center click

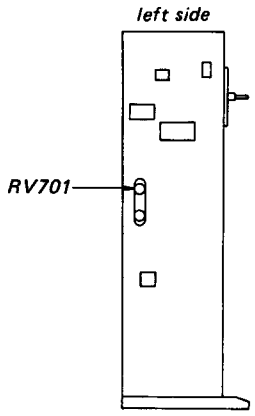
Switch	In playback	In record
POWER	ON	ON
REEL SIZE	7	7
TAPE SPEED	19	19
TIMER	OFF	OFF
MIC ATT		0
TAPE SELECT (BIAS)		MED
TAPE SELECT (EQ)		SPECIAL
REC MODE	PB	REC
MONITOR	TAPE	SOURCE (TAPE)
REC MONITOR MUTE	OFF	OFF
INPUT SELECT (AEP, UK, PX model)	LINE	LINE

B+ Voltage Adjustment

Adjustment Location:

– function button board –

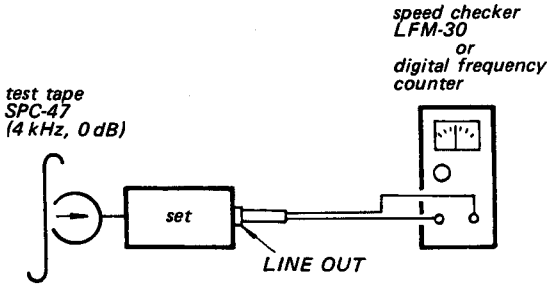




Tape Speed Adjustment

Procedure:

Mode: playback



Use a non-metallic screwdriver. Adjust RV901 (19 cm/s) and RV902 (9.5 cm/s) for 0% checker or 4,000 Hz (19 cm/s) and 2,000 Hz (9.5 cm/s) counter readings.

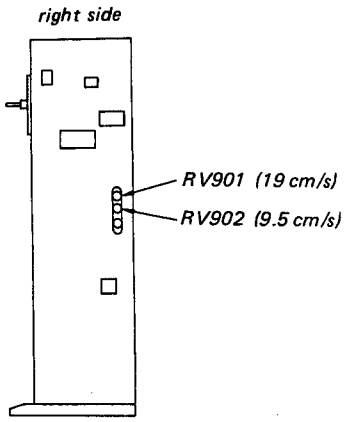
Specification:

Speed checker	Frequency counter
±0.75%	3,970–4,030 Hz (19 cm/s) 1,985–2,015 Hz (9.5 cm/s)

Frequency difference between beginning and end of tape:

19 cm/s: within 0.5% or 20 Hz
9.5 cm/s: within 0.5% or 10 Hz

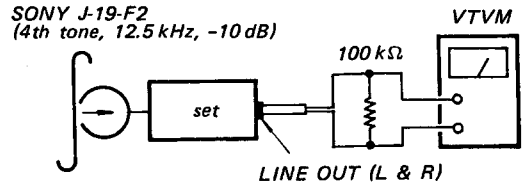
Adjustment Location:



Playback Head Angle Adjustment

Procedure:

Mode: playback

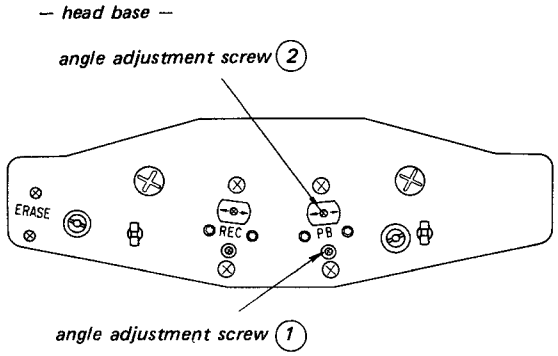


Loosen the adjustment screws (1) and (2) and adjust the position of the PB head by moving the screw (2) in the arrowed direction for the highest VTVM reading.

After the adjustment, apply a locking compound to the screws.

Note: Slightly touch the supply reel and at this time the VTVM reading deviation should be less than 1 dB.

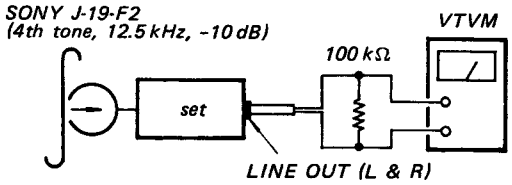
Adjustment Location:



Playback Head Azimuth and Phase Adjustment

Procedure:

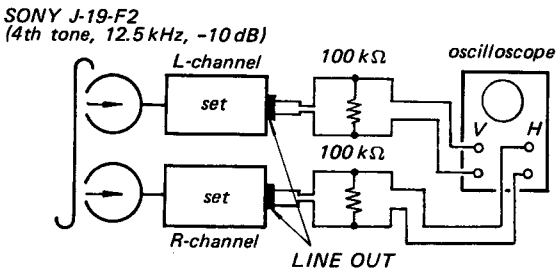
1. Mode: playback



Turn the adjustment screws of the PB head for the highest VTVM reading. If the highest peaks for L and R do not coincide, place the adjustment screw to the point where both L and R outputs are same and within 1 dB from the peaks.

Note: The two adjustment screws are so constructed to react each other. When one side screw is loosened, tighten another screw in the same angle.

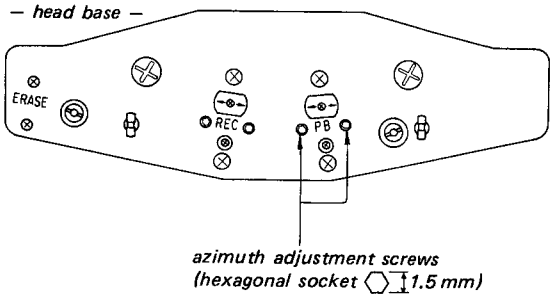
2. Mode: playback



Adjust	On the oscilloscope			
azimuth adjustment screw	in-phase	30°	90°	more than 90°
	good			wrong

Note: Difference between the highest levels of L and R and the finally adjusted level should be within 1 dB.

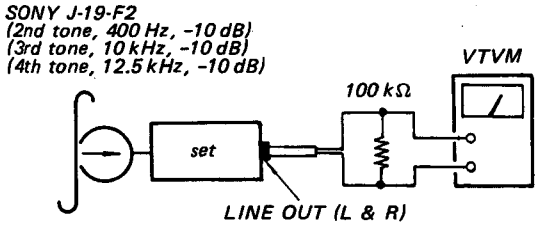
Adjustment Location:



Playback Frequency Response Adjustment

Procedure:

Mode: playback
PLAYBACK HEAD switch: 2 TRACK

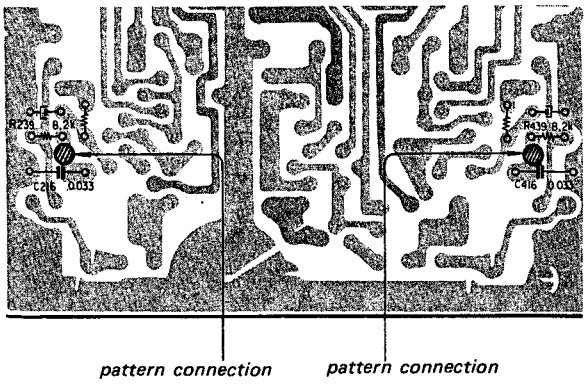


Adjust the pattern connections to obtain the specified values.

Playback	Level difference from 400 Hz
10 kHz 12.5 kHz	within ± 2 dB

Adjustment Location:

– audio amp board –

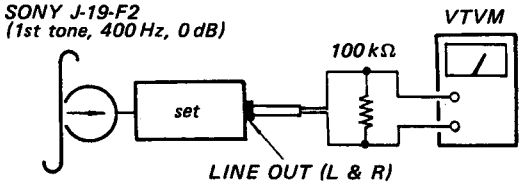


Note: After this adjustment perform the playback level adjustment.

Playback Level Adjustment

Procedure:

Mode: playback

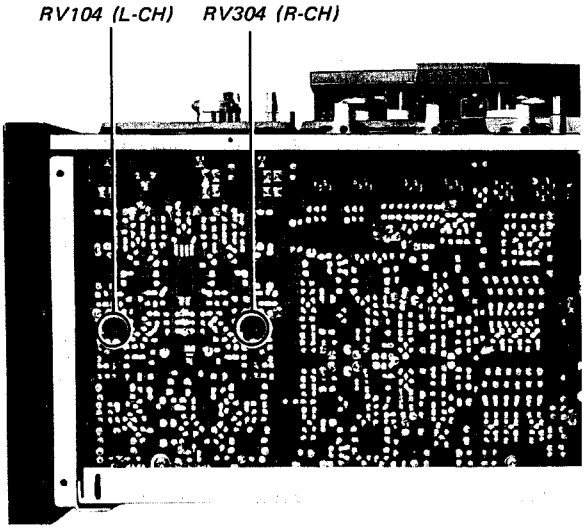


Adjust	VTVM reading
RV104 (L-CH) RV304 (R-CH)	0.44 V (-5 dB) allowance: ± 1 dB (0.39–0.49 V)

Note: Level difference between L and R channels should be within 1 dB.

Adjustment Location:

– audio amp board –



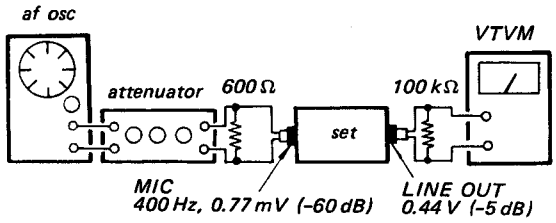
VU Meter Calibration

Setting:

MONITOR switch: SOURCE

Procedure:

1. Mode: record

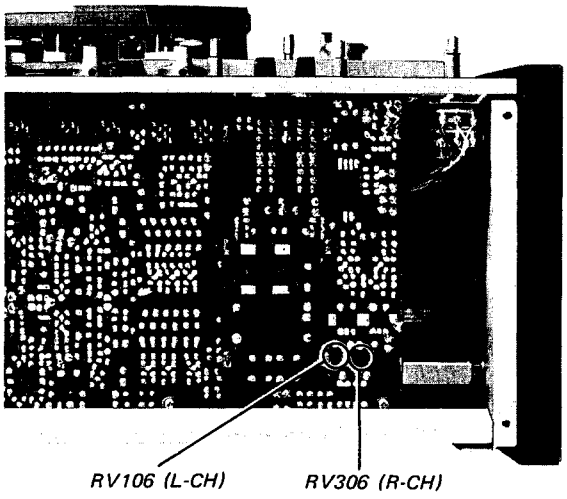


2.

Adjust	VU meter indication
RV106 (L-CH) RV306 (R-CH)	"0"

Adjustment Location:

– audio amp board –



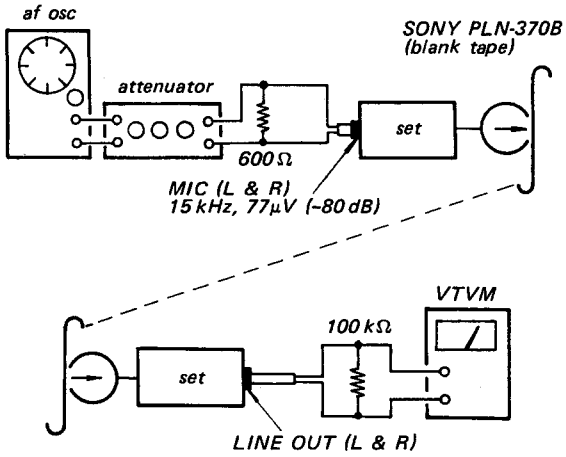
Record Head Angle Adjustment

Setting:

MONITOR switch: TAPE

Procedure:

Mode: record and simultaneous playback
PLAYBACK HEAD switch: 2T REC



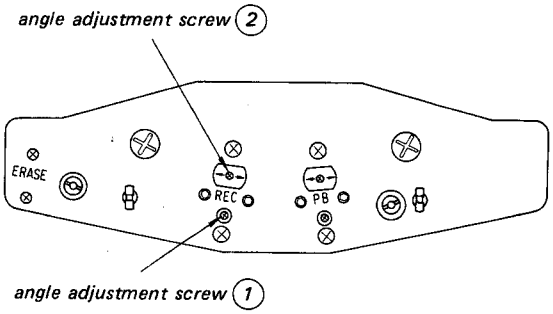
Loosen the adjustment screws ① and ②. Correctly position the record head by moving the adjustment screw ② in the arrowed directions for the highest VTVM reading.

Note: Slightly touch the supply reel and at this time the VTVM reading deviation should be less than 1 dB.

After the adjustment, apply a suitable locking compound to the screws.

Adjustment Location:

– head base –



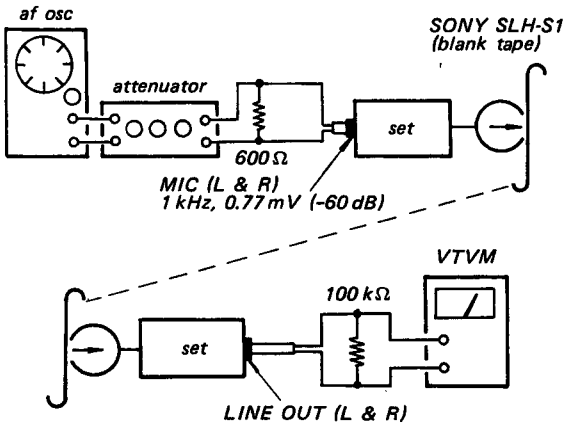
Record Head Height and Zenith Adjustment

Setting:

MONITOR switch: TAPE

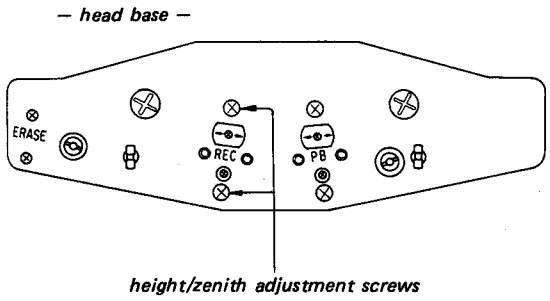
Procedure:

Mode: record and simultaneous playback
PLAYBACK HEAD switch: 2 TRACK



Turn the height and zenith adjustment screws for the highest VTVM reading.

Adjustment Location:



Record Head Azimuth and Phase Adjustments

Setting:

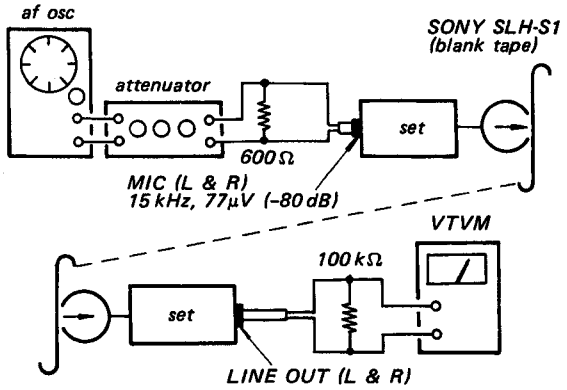
MONITOR switch: TAPE

Procedure:

When a simplified test is made, follow Procedure 1. When an oscilloscope is available, employ Procedure 2.

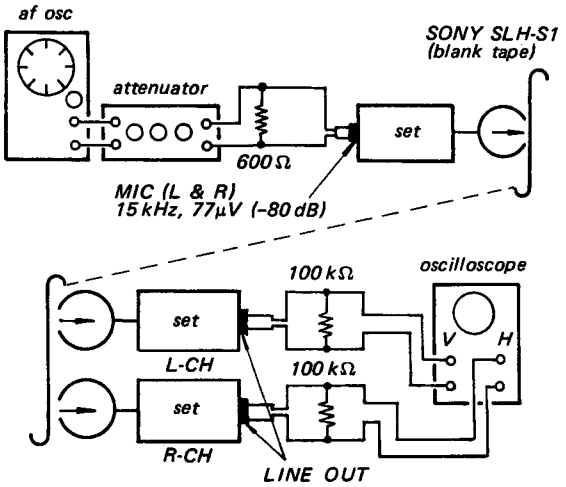
Note: The two adjustment screws are so constructed to react each other. When one side screw is loosened, tighten another screw in the same angle.

1. Mode: record and simultaneous playback



Turn the adjustment screws for the highest VTVM reading. If the highest peaks for L and R do not coincide, place the adjustment screws to the point where both L and R outputs are same and within 1 dB from the peaks.

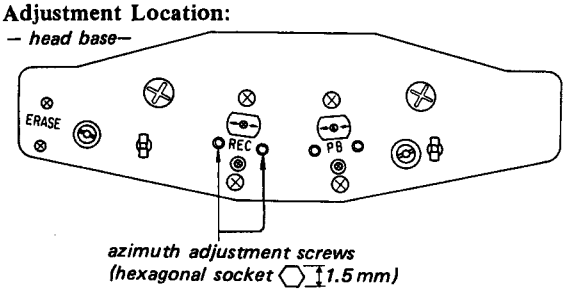
2. Mode: record and simultaneous playback



Adjust	On the oscilloscope			
azimuth adjustment screw	in-phase	30°	90°	more than 90°
	good			wrong

Note: Difference between the highest levels of L and R and the finally adjusted level should be within 1 dB.

Adjustment Location:



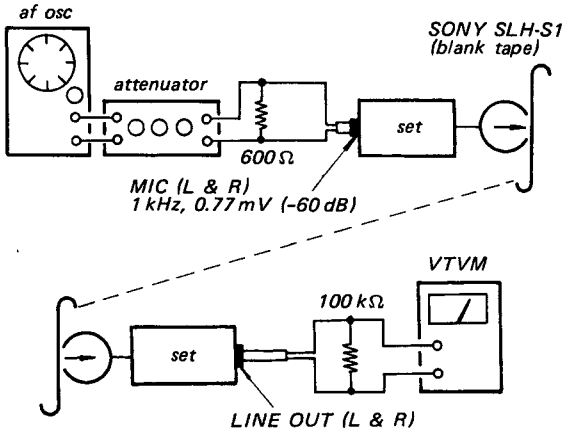
Record Bias Adjustment

Setting:

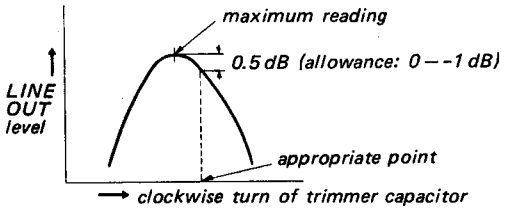
MONITOR switch: TAPE

Procedure:

Mode: record and simultaneous playback

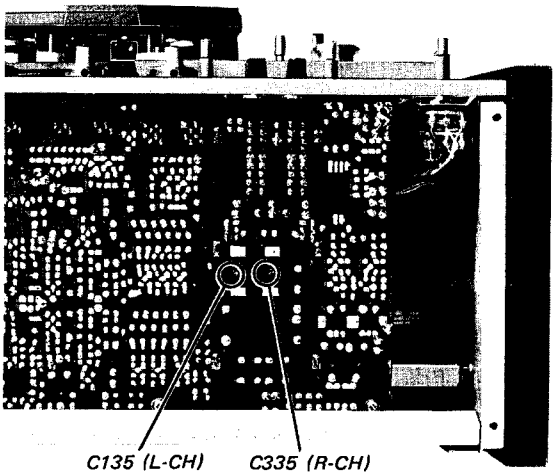


As trimmer capacitor C135 (L-CH) or C335 (R-CH) is slowly turned clockwise, VTVM reading will go up to a maximum and then start falling again. Adjust the capacitor until VTVM reads 0.5 dB below and beyond the maximum reading.



Adjustment Location:

– audio amp board –



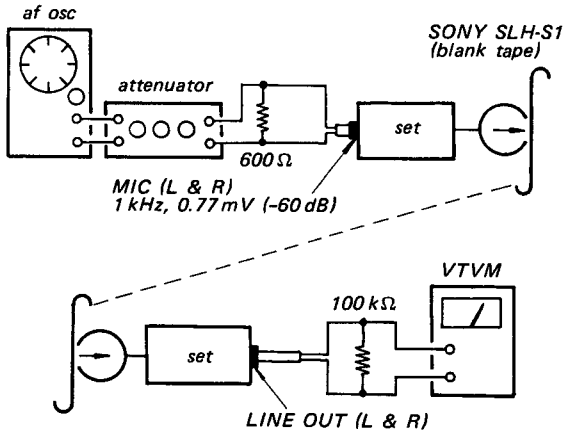
Record Level Adjustment

Setting:

MONITOR switch: TAPE

Procedure:

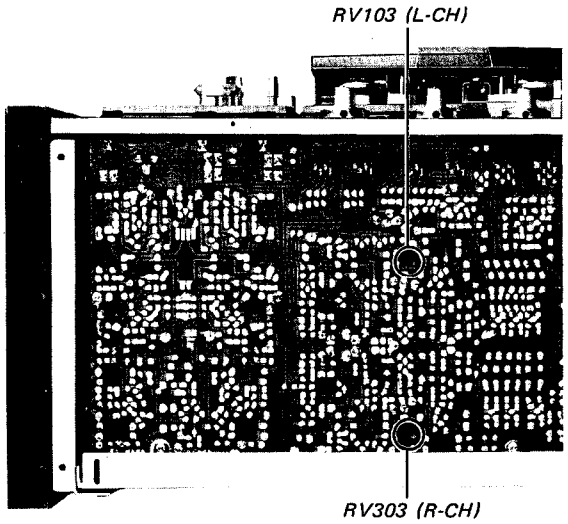
Mode: record and simultaneous playback



Adjust	VTVM reading
RV103 (L-CH) RV303 (R-CH)	0.44 V (–5 dB)

Adjustment Location:

– audio amp board –



Record Equalizer Adjustment

Setting:

MONITOR switch: TAPE

Procedure:

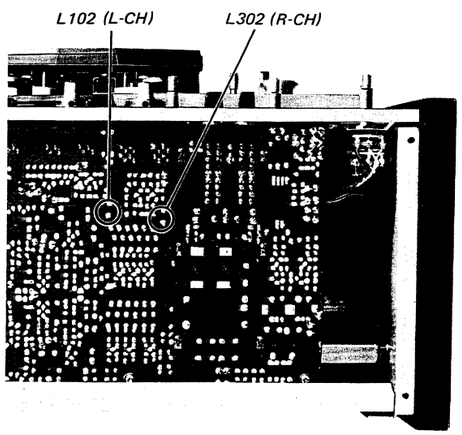
Mode: record and simultaneous playback

	Adjust	Remarks
1 kHz 25 kHz	L102 (L-CH) and L302 (R-CH)	Same LINE OUT level at both frequencies.

Level-difference allowance of 25 kHz signal from 1 kHz: 0 dB – -3 dB

Adjustment Location:

– audio amp board –



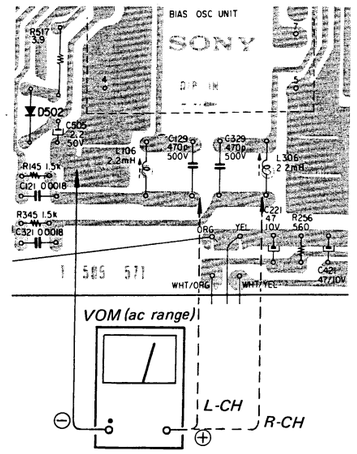
Record Bias Trap Adjustment

Setting:

MIC REC control: 0
LINE REC control: 0

Procedure:

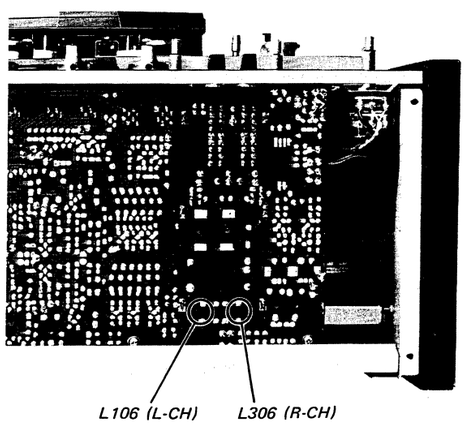
Mode: record



Adjust	VTVM reading
L106 (L-CH) L306 (R-CH)	minimum

Adjustment Location:

– audio amp board –



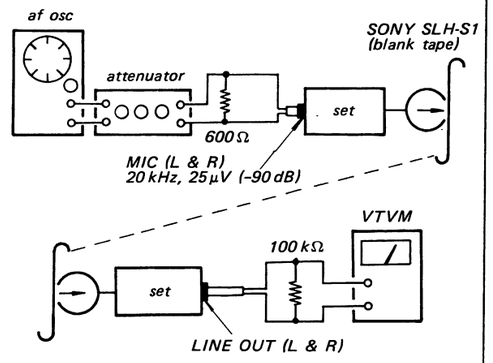
Dummy Coil Adjustment

Setting:

MONITOR switch: TAPE

Procedure:

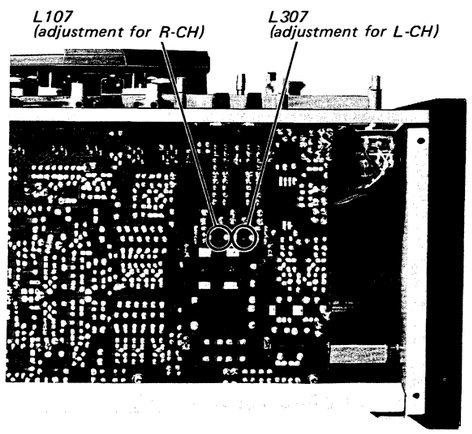
Mode: record and simultaneous playback



Step	Mode	Adjust	Remarks
1	stereo record and simultaneous playback	–	Record VTVM reading.
2	L channel record and simultaneous playback	L307	same VTVM reading as in step 1.
3	R channel record and simultaneous playback	L107	

Adjustment Location:

– audio amp board –



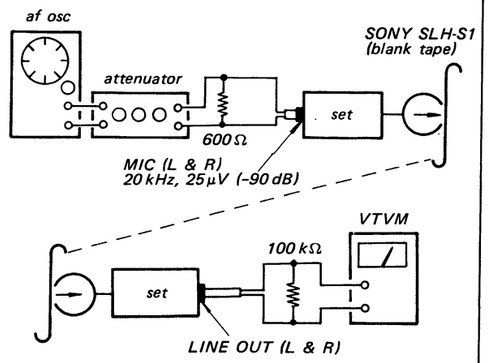
Dummy Coil Adjustment

Setting:

MONITOR switch: TAPE

Procedure:

Mode: record and simultaneous playback



Step	Mode	Adjust	Remarks
1	stereo record and simultaneous playback	–	Record VTVM reading.
2	L channel record and simultaneous playback	L307	same VTVM reading as in step 1.
3	R channel record and simultaneous playback	L107	

Adjustment Location:

– audio amp board –

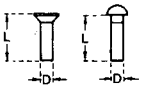
HARDWARE NOMENCLATURE

Screw:

P 3 x 10
- *L: Length in mm*
- *D: Diameter in mm*
- *Type of head*
- *Indicated slotted-head only. Unless otherwise indicated, it means cross-recessed head (Phillips type).*



Nut, Washer, Retaining ring:

N 3
- *Diameter of usable screw or shaft*
- *Reference designation*

Reference Designation	Shape	Description	Remarks
		SCREWS	
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
