

Service Manual

Cassette Deck

RS-HDA710 RS-HD310

AR-1 Mechanism Series

Colour

(N).....Gold Type

Area

E.....Europe.

System : SC-HD510

SC-HD310

Because of unique interconnecting cables, when a component requires service, send or bring in the entire system.

Note: Refer to the service manuals for Model No. SE-HD510, SE-HD310 (ORDER NO.AD0001015C2, AD0001018C2) for information on "ACCESSORIES" and "PACKAGING".

Specification

●Audio Section

Track system 4 track, 2 channel STEREO

Frequency response

(Dolby B NR off) (Rec./Play)

TYPE I (Normal) 30Hz-16kHz (DIN)

TYPE II (High) 30Hz-16kHz (DIN)

TYPE IV (Metal) 30Hz-16kHz (DIN)

S/N (Signal level=max recording level, TYPE II type tape)

NR off 56dB (A weighted)

Dolby B NR on 64dB (A weighted)

●Motors

Capstan drive DC servo motor

Reel table drive DC motor

Wow and flutter 0.1% (WRMS)

Fast forward and rewind times Approx.52 seconds with C-60 cassette tape

●General

Dimensions (WxHxD): 196x105.8x236.1mm

Weight

1.5kg

Power supply

DC13V/10V

Power consumption

10W

Notes:

1.Dimensions and weight are approximate.

2.Design and specifications are subject to change without notice.

*Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.

"DOLBY", and the double-D symbol are trade marks of Dolby Laboratories Licensing Corporation.

1 Before Repair

These equipments (RS-HDA710/HD310), which are components of these systems, are supplied with power from the amplifiers (SE-HD510/310) through the tuners (ST-HD510/310). When repairing these equipments or checking operation of the systems, be sure to connect the amplifiers and tuners with it.

These equipments, even in the state of it as a single equipment, permits power supply and operation check. When operating it as a single equipment without the amplifier and tuner, refer to the paragraph of "Measurements and Adjustments".

2 Operating Instructions

- ① Cassette holder
- ② Cassette tray open/close button (▲ OPEN/CLOSE)
- ③ Counter button (COUNTER)
- ④ Dolby noise reduction button (DOLBY NR)
- ⑤ Counter reset button (RESET)
- ⑥ Reverse mode select button (REV MODE)
- ⑦ Tape Program Sensor button (TPS SKIP)
- ⑧ Fast forward/rewind buttons (◀◀ [TPS] ▶▶)
- ⑨ Record pause button and indicator (● REC PAUSE)
- ⑩ Playback buttons and indicators (◀, ▶)
- ⑪ Stop button (■)

The color of the indicator depends on the operation taking place.
 If stopped, fast forwarding or rewinding: orange
 If playing, recording, or carrying out TPS: green

3 Operation Checks and Component Replacement Procedures

- This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
- For reassembly after operation checks or replacement, reverse the respective procedures. Special reassembly procedures are described only when required.

3.1. Checking for the operation P.C.B.

- Check the operation P.C.B. as shown below.

3.2. Checking for the main P.C.B.

- Follow the (Step 1) - (Step 5) of item 3.1.

- Check the main P.C.B. as shown below.

3.3. Replacement for the cassette holder ass'y

• Follow the (Step 1) - (Step 5) of item 3.1.

(Step 3) Remove the flat cables from connectors.
(Step 4) Remove the mechanism ass'y and main P.C.B..

(Step 5) Press the drive rack with minus screwdriver, and then open the cassette holder ass'y.

(Step 6) Release the 2 claws.

(Step 7) Remove the cassette holder ass'y from the boss of drive rack.

(Step 8) Locate the cassette holder ass'y and mechanism unit at a 70 degree angle, and then pull out the cassette holder ass'y.

NOTE: When removing the cassette holder ass'y, avoid to pull it with holding cassette tray or tray holder.

Installation of the cassette holder ass'y after replacement

(Step 1)
Tilt the drive gear in the direction of arrow (1).

(Step 2)
Force the drive rack fully in the direction of arrow (2).

(Step 3)
Locate the cassette holder ass'y and mechanism unit at a 70 degree angle, and then install the cassette holder ass'y.

(Step 4)
Tilt the cassette holder ass'y in the direction of arrow, and then secure it to the mechanism unit.

3.4. Replacement for the belt, reel motor ass'y and capstan motor ass'y

- Follow the **(Step 1) - (Step 5)** of item 3.1.
- Follow the **(Step 1) - (Step 8)** of item 3.3.

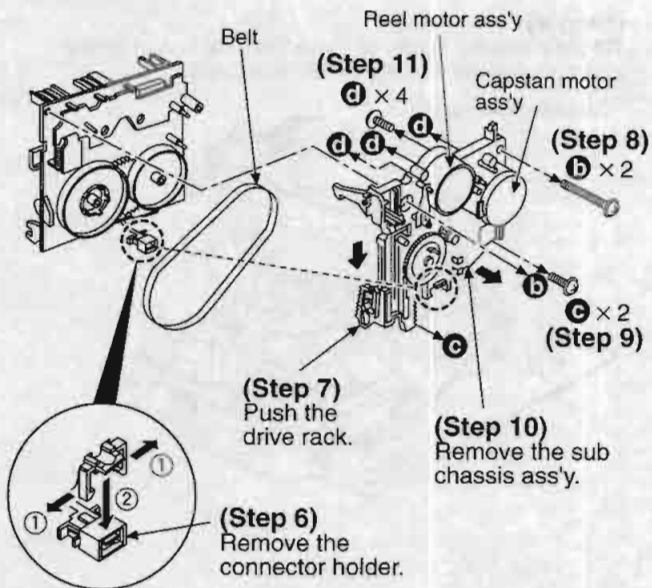

(Step 1)
Unsolder the reel motor terminals (2 points).

(Step 2)
Unsolder the capstan motor terminals (4 points).

(Step 4)
Release the claw.

(Step 5)
Remove the 2 connectors.

Installation of the sub chassis ass'y after replacement

3.5. Replacement for the parts mounted on mechanism P.C.B.

- Follow the (Step 1) - (Step 5) of item 3.1.
- Follow the (Step 1) - (Step 8) of item 3.3.
- Follow the (Step 1) - (Step 10) of item 3.4.

3.6. Replacement for the head block and pinch roller ass'y

- Follow the (Step 1) - (Step 5) of item 3.1.
- Follow the (Step 1) - (Step 8) of item 3.3.
- Follow the (Step 1) - (Step 5) of item 3.4.

(Step 1)
Release the 2 claws, and then
remove the pinch roller ass'y.

4 Measurements and Adjustments

These units RS-HDA710/HD310 are designed to operate on power supplied from the Amplifiers (SE-HD510/310) through Tuners (ST-HD510/310).

When connecting the unit to other system components, do not connect to the Amplifier (SE-HD510/310) directly. Be sure to connect this unit through the Tuner (ST-HD510/310).

When operating the units RS-HDA710/HD310 alone for testing and servicing, without having power supplied from the Amplifiers (SE-HD510/310) and Tuners (ST-HD510/310), use the following method.

4.1. To Supply Power Source

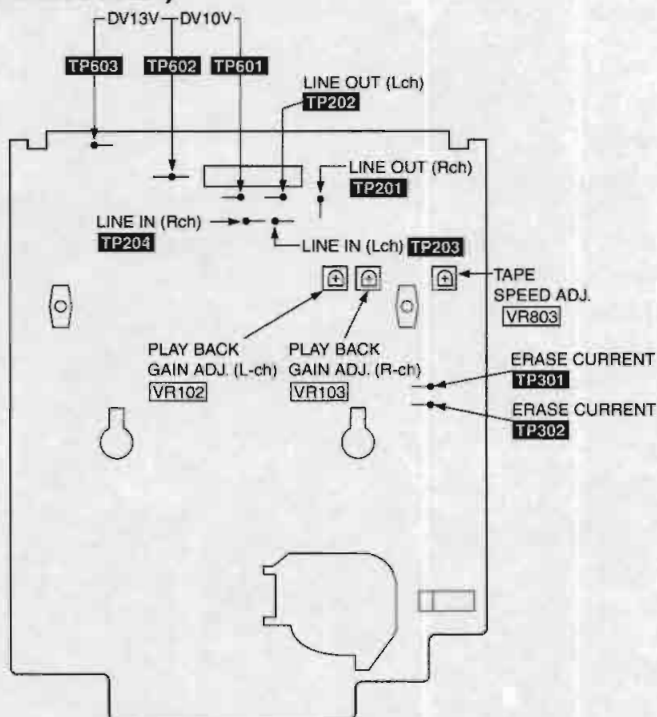

Supply 10V DC power to test points between TP601 and TP602, and supply 13V DC power to test points between TP603 and TP602. (As shown in Fig.1.)

Note:When operated alone, these units automatically enter the TEST mode, causing indicators to blink.

4.2. To Check Signals

Connect an oscilloscope or a built-in amplifier speaker between line output for Rch(TP204) and A.GND, and line out for Lch(TP203) and A.GND and check if the signals are outputting from this unit. (As shown in Fig.1.)

(MAIN P.C.B.)

Note:
The above symbol indicates a jumper soldered on one side. When this jumper is levered up using a ⊖ screwdriver, its unsoldered side is raised so that it can be seized with an alligator clip.

Fig.1

4.2.1. Measurement Condition

- Make sure head is clean.
- Make sure capstan and pressure rollers are clean.
- Judgeable room temperature is in $20 \pm 5^{\circ}\text{C}$ ($68 \pm 9^{\circ}\text{F}$)

4.2.2. Measuring Instruments

- EVM(Electric Voltmeter)
- AF oscillator
- Digital frequency counter

4.2.3. Test Tapes

- Head azimuth adjustment(12.5kHz); QZZ-AER
- Tape speed adjustment(3kHz, -10dB); QZZCWAS
- Recording/ playback frequency response adjustment; QZZCFM(315Hz/0dB, 315Hz/-20dB, 12.5kHz~63Hz/-20dB) QZZCRA(Normal blank tape) QZZCRX(CrO2 blank tape) QZZCRZ(Metal blank tape)

4.3. Head Azimuth Adjustment

1. Connect the measuring instrument as shown in Fig. 2.
2. Replace azimuth screws for both forward and reverse direction after removing the screw-locking bond left on the head base.

(Supply part No. of azimuth adjusting screw: **RHD17015**)

3. Playback the azimuth adjustment portion(12.5kHz) of test tape(QZZ-AER). Adjust the azimuth adjusting screw until the outputs of the L/Rch are maximized. (Refer to Fig. 3.)

Make sure that the difference in the peak level between the left and right channels does not exceed 0.5dB.

4. Perform the same adjustment in reverse playback mode.

Check of the level difference forward and reverse directions

5. Playback the playback gain adjustment portion(315Hz, 0dB) of test tape(QZZCFM). Check if level difference between forward and reverse direction is within 1.5dB.

6. After the adjustment, apply screwlock to the azimuth adjusting screw.

Fig. 2

Fig. 3

4.4. Tape Speed Adjustment

Normal speed (Standard value; 3000 ± 45Hz)

1. Connect the measuring instrument as shown in Fig. 4.
2. Playback the middle portion of the test tape(QZZCWAT).
3. Adjust **VR803** for the output value shown below. (Refer to Fig.1)

Adjustment target: 3000 ± 15Hz

Standard value: 3000 ± 45Hz

Fig. 4

4.5. Playback Gain Adjustment

1. Connect the measuring instrument as shown in Fig 5.
2. Find the start of the 315Hz/0dB section of the test tape(QZZCFM), insert the tape, and play it back(FWD).
3. Adjust **VR103**(Rch) [**VR102**(Lch)] so that the output is within the standard value. (Refer to Fig.1).

Standard value: 280mV ± 0.5dB

Fig 5

4.6. Erase Current Confirmation

1. Connect the measuring instrument as shown in Fig. 6.
2. Insert the blank tape, and press the REC PAUSE button.
3. Check if the output at this time between the erase current confirmation point(TP301) and(TP302) (the output on both edged of R313) is within the standard value.

Standard value	EVM reading
Normal tape: 75 ± 25 mA	(75 ± 25 mA)
CrO2 tape: 110 ± 25 mA	(110 ± 25 mA)
Metal tape: 180 ± 25 mA	(180 ± 25 mA)

Note: The test tape is not required when confirming the erase current.

Fig. 6

4.7. Playback frequency response check

1. Connect the measuring instrument as shown in Fig. 7
2. Playback the 315Hz/-20dB and 12.5kHz to 63Hz/-20dB sections of the test tape(QZZCFM) and then, using the 315 Hz/-20dB playback output as a reference(0 dB), confirm that the playback frequency response is within the range shown in Fig. 8.

Fig. 7

Fig. 8

4.8. Recording/playback frequency response and gain check

Normal tape check

1. Connect the measuring instrument as shown in Fig.9.
2. Set the playback frequency of the recorded signals at 1kHz as the reference response(0 dB).
3. Playback the recorded signals to confirm that the output is within the range of the overall frequency response shown in Fig. 10.

CrO2/Metal tape check

4. Repeat steps 3 to 5 for each tape and confirm that the output for each is within the range of the overall frequency response shown in Fig. 11.

Fig.9

Normal Overall Frequency response chart(NR OFF)

Fig. 10

CrO2/Metal Overall frequency response chart(NR OFF)

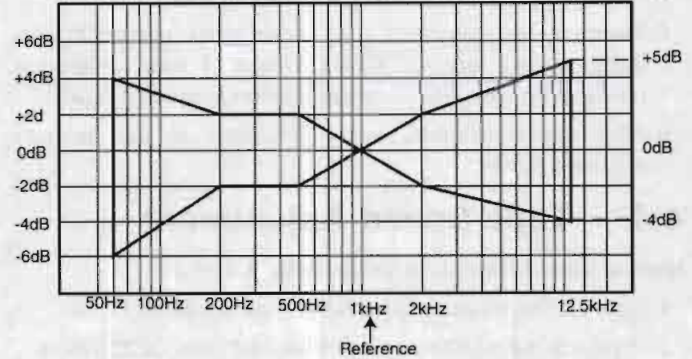

Fig. 11

5 Service Mode Function of Cassette Mechanism

These units are equipped with a service mode function of cassette mechanism using the LED indicators[R.PLAY(◀), F.PLAY(▶)]. Use this function during maintenance to check faults of the items below.

5.1. Cassette tapes to be prepared

Metal tape: Recorded music tape remaining the only one erase-prevention tab(use middle portion of the tape).

Normal, CrO₂ tape: Recorded music tape remaining the both erase-prevention tabs(use middle portion of the tape).

5.2. Selecting Service Mode

1. Turn on the power to the unit. (If RS-HDA710/HD310 units are removed from system, turn it on according to

"Measurements and Adjustments".)

2. Check that no tape is inserted in the cassette deck. Press the **STOP** button for about 2 seconds, and keep pressing **▶▶** [TPS] button, also let go of the **STOP** button and wait over 2 seconds. (As shown in Fig. 12.)
3. The LED indicator for **REC PAUSE** flashes, the service mode has been activated.

Fig. 12

* : Service mode diagnostic items are as shown in Fig. 13.

Service Mode Diagnostic items

No.	LED indicator status (off/flashing)				Fault location
	orange		green		
	◀	▶	◀	▶	
	-	-	-	-	
1.	●	-	-	-	MODE detect switch

3.	●	●	-	-	Half detect switch
4.	-	-	●	-	Deck OPEN switch
5.	-	-	-	●	Deck CLOSE switch
6.	-	-	●	●	CrO ₂ tape detect switch
7.	●	-	-	-	Metal tape detect switch
8.	-	●	-	-	Reel pulse detect system (Hall IC, etc.)
9.	-	-	●	-	TPS operation
10.	-	-	-	●	Reel motor

Table 1: Service Mode Diagnostic Items

Notes:

"●" : Flashing

"- " : off

*If no fault, all indicators go out.

Fig. 13

5.3. Exiting Self-Check Mode

1. Press RESET button (Diagnostic contents stored in memory are erased.)(As shown in Fig. 14)
2. Remove the cassette tape from the cassette holder.
3. Turn off the unit.

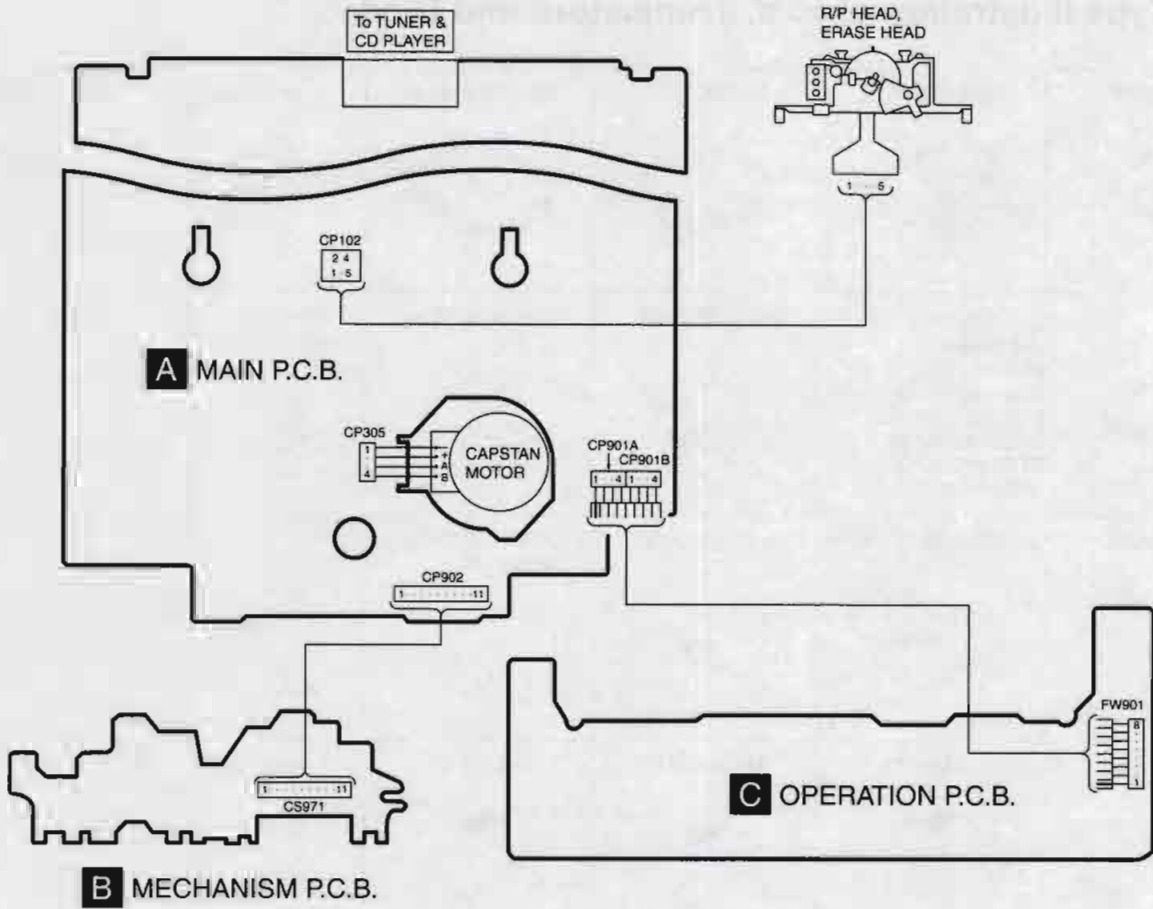

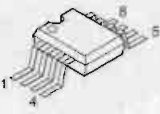

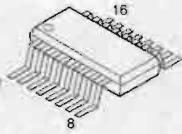

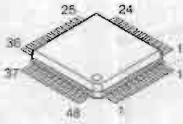

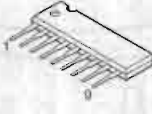

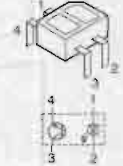

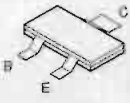

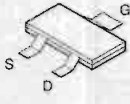

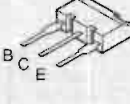

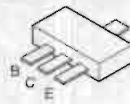

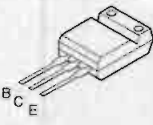

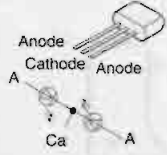

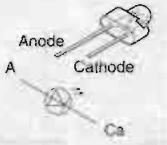

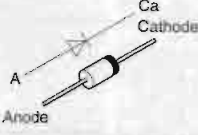

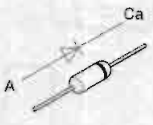

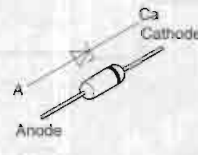

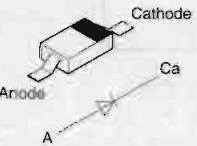

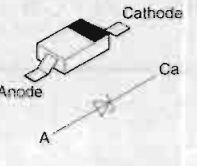

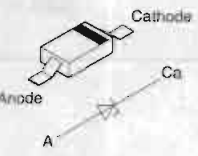

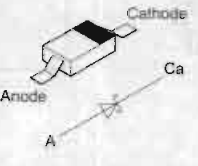

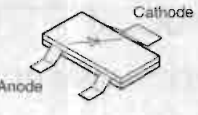

Fig. 14

- **VR803:** Tape speed adj. V.R..
- Resistance are in ohms (Ω), 1/4 watt unless specified otherwise. 1K=1,000 (Ω), 1M=1,000k (Ω)
- Capacity are in micro-farads (μ F) unless specified otherwise.
- All voltage values shown in circuitry are under no signal condition and playback mode with volume control at minimum position otherwise specified. ()...Voltage values at record mode. For measurement us EVM.
- Important safety notice:
Components identified by \triangle mark have special characteristics important for safety.
When replacing any of components, be sure to use only manufacture's specified parts shown in the parts list.
- Voltage and signal lines

 - ➔ : Positive voltage line
 - ➔ : Playback signal line
 - ➔ : Recording signal line
- Caution!
IC and LSI are sensitive to static electricity. Secondary trouble can be prevented by taking care during repair.
- Cover the parts boxes made of plastics with aluminum foil.
- Put a conductive mat on the work table.
- Do not touch the legs of IC or LSI with the fingers directly.

11 Terminal Function of IC's

11.1. IC701(M37478M4458F): SYSTEM CONTROL

Pin No.	Mark	I/O Division	Function
1	NC	—	—
2	DATA IN	I	Serial data signal input terminal from system control IC
3	S-REQ	I	Serial request signal input terminal from system control IC
4	HSPD	O	Speed cont. (Q819) signal output terminal
5	SOL	O	Signal output terminal to solenoid drive (Q813)
6	CSOL	O	Signal output terminal to solenoid drive (Q814)
7	RECINH-SW	I	Deck forward side tape recording prevention tab detect switch signal input terminal
8	RPS	I	Deck reverse side reel rotation detect pulse signal input terminal
9	RPT	I	Deck forward side reel rotation detect pulse signal input terminal
10	AD-SW	I	Deck2 reel switch signal input terminal
11	ATS	I	Deck tape selector signal input terminal
12	—	—	—
13	KEY1	I	Key switch signal input terminal
14	—	—	—
15	VREF+5V	I	Reference voltage input terminal
16	NC	—	Not used, connected to GND
17	—	—	—
18	XIN	I	Crystal oscillator terminal(f=8 MHz)
19	XOUT	O	—
20	NC	—	Not used, connected to GND
21	AVss	—	GND terminal
22	Vss	—	GND terminal
23	Vcc	I	Power supply input terminal
24	NC	—	Not used, connected to GND
25	TPS	I	Signal input for tune presence det. in TPS operation
26	—	—	Not used, connected to GND
27	NC	—	Not used, connected to GND
28	RESET	I	Reset signal input terminal
29	NC	—	Not used, connected to GND
30	SYNC	I	Synchronizing signal output to ST-HD510/310
31 ~ 33	—	—	Connected to power supply through resistor
34	NC	—	—
35	ADATA	O	Serial data output terminal to IC101
36	ACLK	O	Serial clock output terminal to IC101
37	ALATCH	O	Latch signal output terminal to IC101
38	DMT	O	Muting signal output terminal to switching cont. (Q112)
39	PLAY/STOP	O	Signal output terminal to LED drive(Q903)
40	REVLED	O	Signal output terminal to LED drive(Q904)
41	FWDLED	O	Signal output terminal to LED drive(Q905)
42	RECLEL	O	Signal output terminal to LED drive(Q906) ("H": REC)
43	BLU-LED	O	Signal output terminal to LED drive (Q708) (Connected to GND through resistor)
44	NC	—	Not used, connected to LED drive
45	—	—	—

Pin No.	Mark	I/O Division	Function
46	CAP	O	Signal output terminal to capstan motor drive(Q815)
47	RMR	O	Signal output terminal to reel motot drive(IC801)
48	RMF	O	Signal output terminal to reel motor drive(IC801)
49	CLOSE-SW	I	Deck cassette holder "CLOSE" det. switch signal input terminal
50	NC	—	Not used, connected to GND
51	Vss	—	GND terminal
52	OPEN-SW	I	Deck cassette holder "OPEN" det. switch signal input terminal
53	CS	I	Serial finish signal input terminal from system control IC
54	CLK	O	Serial clock signal output terminal to system control IC
55	DATA OUT	O	Serial data output terminal to system control IC
56	NC	—	Not used, connected to GND

12 Replacement Parts List

Notes: *Important safety notice:

Components identified by Δ mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant(resistors), high-quality sound(capacitors), low-noise(resistors), etc. are used.

When replacing any of components, be sure to use only manufacture's specified parts shown in the parts list.

*Capacity values are in microfarads(F) unless specified otherwise, P=Pico-farads(pF) F=Farade(F)

*Resistance values are in ohms, unless specified otherwise, 1K=1,000(OHM), 1M=1,000k(OHM)

*The marking (RTL) indicates that the Retention Time is limited for this item. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.
