

Service Manual

Stereo Power Amplifier

SE-A1010

Colour

- (K).....Black Type
- (N).....Gold Type

Areas

- (E).....Europe.
- (EB).....Great Britain.
- (EG).....Germany.

Specifications (DIN 45 500)

20 Hz – 20 kHz continuous power output	
both channels driven:	2 x 70 W (8 Ω)
1 kHz continuous power output	
both channels driven (THD: 1 %):	2 x 85 W (8 Ω) 2 x 120 W (4 Ω)
63 Hz – 12.5 kHz continuous power output	
both channels driven (THD: 0.7 %):	2 x 80 W (8 Ω) 2 x 105 W (4 Ω)
Total harmonic distortion (THD)	
rated power at 20 Hz – 20 kHz:	0.015 % (8 Ω)
Intermodulation distortion	
(50 Hz : 7 kHz = 4 : 1, SMPTE):	0.007 % (8 Ω)
Residual hum and noise:	0.3 mV
Damping factor:	70 (8 Ω) 35 (4 Ω)
Headphones output level/impedance:	540 mV/330 Ω
Load impedance:	
A or B;	4 Ω – 16 Ω
A and B;	8 Ω – 16 Ω
Input sensitivity/impedance:	
NORMAL (INPUT LEVEL CONTROL Max.);	1 V/20 kΩ
DIRECT;	1 V/20 kΩ
S/N:	95 dB, rated power, 4 Ω 115 dB (IHF '66), rated power, 8 Ω

Frequency response:

NORMAL;	5 Hz – 100 kHz (+0 dB, -3 dB)
DIRECT;	20 Hz – 20 kHz (+0 dB, -0.5 dB)
	(INPUT LEVEL CONTROL Max.)
	5 Hz – 100 kHz (+0 dB, -3 dB)
	20 Hz – 20 kHz (+0 dB, -0.5 dB)

■ GENERAL

Power supply:	AC 50 Hz, 230 V
For (E) and (EG) areas;	AC 50 Hz, 230 V – 240 V
For (EB) area;	280 W
Power consumption:	1.6 W
Standby;	
Dimensions (W × H × D):	430 × 158 × 344 mm
Weight:	10.3 kg

Notes:

1. Specifications are subject to change without notice.
Weight and dimensions are approximate.
2. Total harmonic distortion is measured by the digital spectrum analyzer.
3. For (EB) area: The specification values given have been measured while using a 240 V-power supply

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

1 Before Repair

1. Turn off the power supply. Using a $10\ \Omega$, 10 W resistor, connect both ends of power supply capacitors (C701, C702) in order to discharge the voltage.
2. Before turning the power supply on, after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed

current at 50 Hz in NO SIGNAL mode should be shown below with respect to supply voltage 230/240 V.

Power supply voltage	AC 230 V, 50 Hz	AC 240 V, 50 Hz
Consumed current	160-320 mA	160-320 mA

2 Protection Circuitry

The protection circuitry may have operated if either of the following conditions is noticed:

- No sound is heard when the power is switched ON.
- Sound stops during a performance.

The functions of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are shorted, or if speaker systems with an impedance less than the indicated rated impedance of this unit are used.

If this occurs, follow the procedure outlined below:

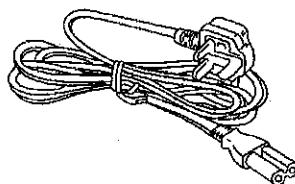

1. Switch OFF the power.
2. Determine the cause of the problem and correct it.
3. Switch ON the power once again.

Note:

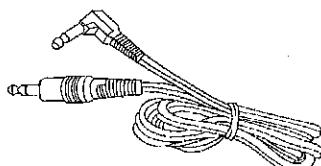

When the protection circuitry functions, the unit will not operate unless the power is first switched OFF and ON again.

3 Accessories

- AC mains lead
(E) and (EG) areas : (RJA0019-X)..... 1 pc.
(EB) area : (RJA0053-2X)..... 1 pc.

- Remote control cable
(SJP2257T)..... 1 pc.

4 Caution for AC Mains Lead

(For United Kingdom)

("EB" area code model only)

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5-ampere and that it is approved by ASTA or BSI to BS1362.

Check for the ASTA mark  or the BSI mark  on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local dealer.

CAUTION!

IF THE FITTED MOULDED PLUG IS UNSUITABLE FOR THE SOCKET OUTLET IN YOUR HOME THEN THE FUSE SHOULD BE REMOVED AND THE PLUG CUT OFF AND DISPOSED OF SAFELY.

THERE IS A DANGER OF SEVERE ELECTRICAL SHOCK IF THE CUT OFF PLUG IS INSERTED INTO ANY 13-AMPERE SOCKET.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt please consult a qualified electrician.

IMPORTANT

The wires in this mains lead are coloured in accordance with the following code:

Blue: Neutral, Brown: Live.

As these colours may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured Blue must be connected to the terminal which is marked with the letter N or coloured Black or Blue.

The wire which is coloured Brown must be connected to the terminal which is marked with the letter L or coloured Brown or Red.

WARNING: DO NOT CONNECT EITHER WIRE TO THE EARTH TERMINAL WHICH IS MARKED WITH THE LETTER E, BY THE EARTH SYMBOL  OR COLOURED GREEN OR GREEN/YELLOW.

THIS PLUG IS NOT WATERPROOF—KEEP DRY.

Before use

Remove the connector cover.

How to replace the fuse

The location of the fuse differ according to the type of AC mains plug (figures A and B). Confirm the AC mains plug fitted and follow the instructions below.

Illustrations may differ from actual AC mains plug.

1. Open the fuse cover with a screwdriver.

Figure A

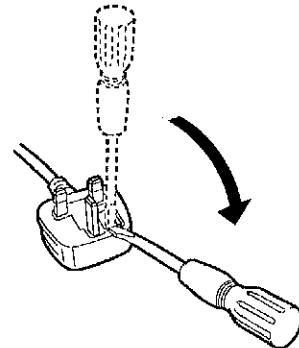

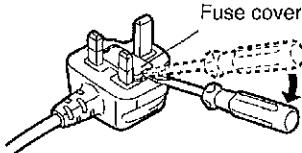

Figure B

2. Replace the fuse and close or attach the fuse cover.

Figure A

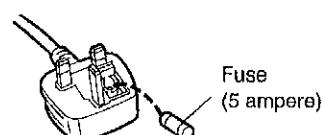

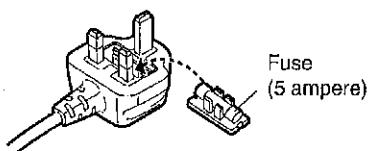

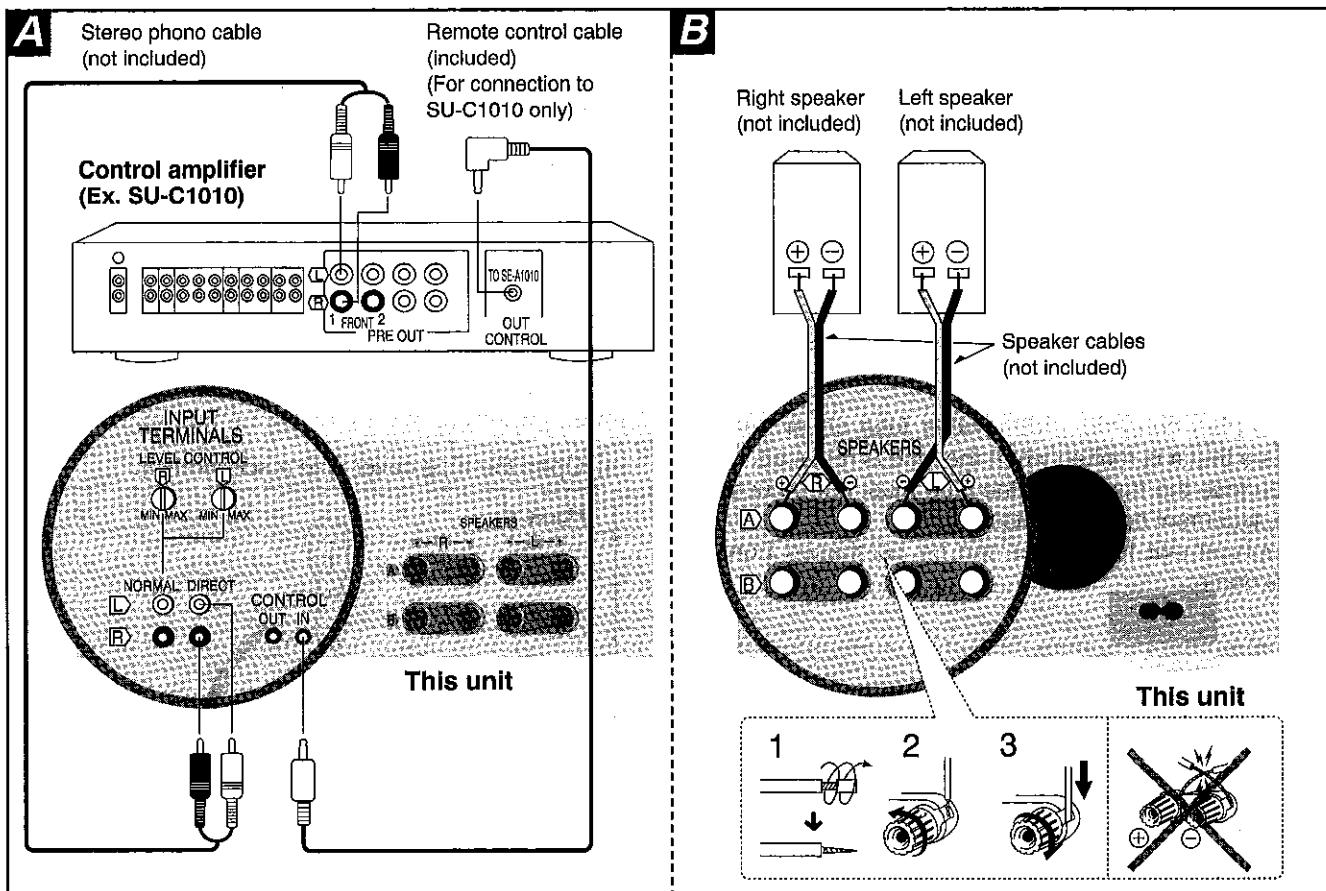

Figure B

5 Operations

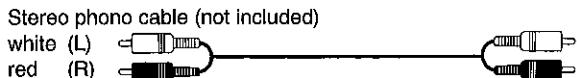

■ Connections

Make sure that the AC mains lead for all components has been turned off before making any connections.

To connect equipment, refer to the appropriate operating instructions.

Connecting to a control amplifier **A**

"INPUT TERMINALS"

The amplifier has two input systems: DIRECT and NORMAL.

DIRECT

When connected to the DIRECT terminals, audio signals do not pass through the level control circuit, so the sound is crisper.

NORMAL

You should use NORMAL input when it is difficult to control volume, for example, when the sound is too loud when you raise volume slightly on the control amplifier. Connect to the terminals and set input level from the LEVEL CONTROL knobs. There are separate level controls for left (L) and right (R).

Turning to the left lowers input, but normally leave it to "MAX".

Remote control cable

This enables you to turn the unit on and off together with SU-C1010.

Caution

Do not use the DIRECT and NORMAL terminals at the same time.

Connecting the speakers **B**

The wires which are connected to the positive (+) terminals of the amplifier should be connected to the positive (+) terminals of the speakers. The negative (-) terminals should be connected similarly.

"B" terminals

For connection to a second pair of speakers.

If using separate treble and bass speakers, connect one set to the "A" terminals and the other set to the "B" terminals.

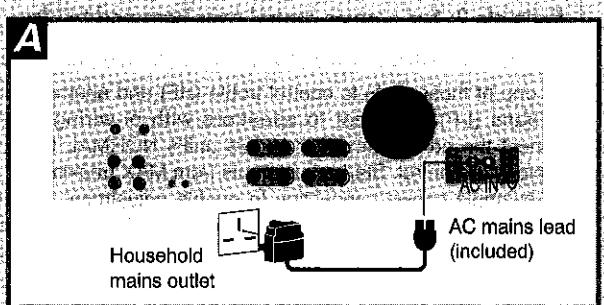

Speaker impedance

When only the "A" or only the "B" terminals are used: 4–16 Ω

When the "A" and "B" terminals are used simultaneously: 8–16 Ω

Caution

To prevent damage to circuitry, never short-circuit the positive (+) and negative (-) speaker wires.

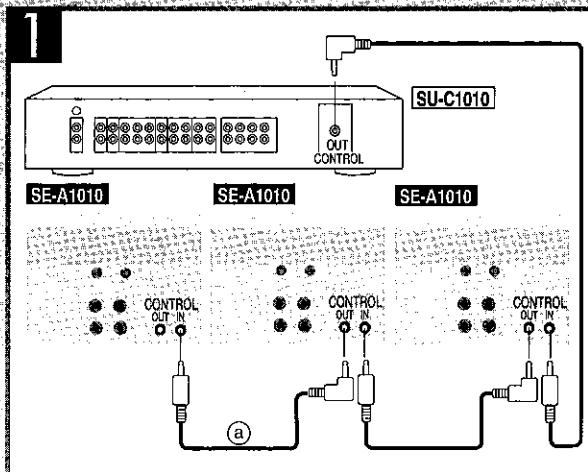

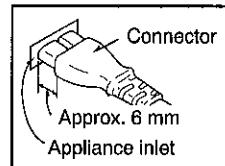

BE SURE TO READ THE CAUTION FOR THE AC MAINS LEAD BEFORE THE FOLLOWING CONNECTION.

Connecting the AC mains lead A

Connect the AC mains lead only after all other connections have been made.

Insertion of Connector

Even when the connector is perfectly inserted, depending on the type of inlet used, the front part of the connector may jut out as shown in the drawing. However there is no problem using the unit.

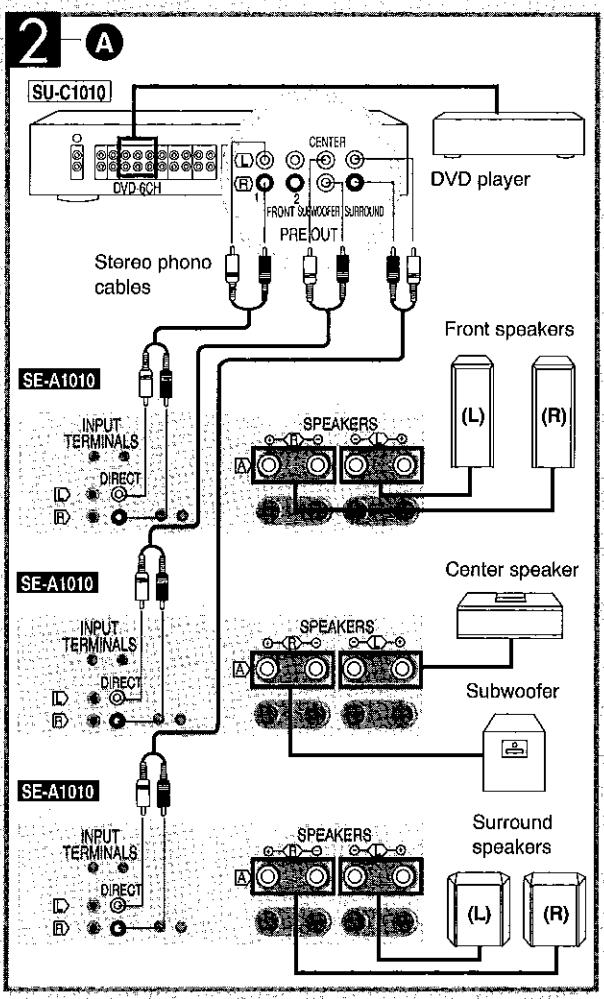

Multiple amplifier system

Connect two or three of these amplifiers to one SU-C1010 Control Amplifier to create different systems.

Use 3 when playing 6 channel systems, such as DVD.

Use 2 for more control over bass and treble balance, or to separate the L and R channels to get a better orientation effect.

1 Connect the remote control cables (included) as shown.

The illustration is an example of when three of these units are used. Connection (②) isn't necessary when two are used.

This connection allows you to control the system's power through the SU-C1010.

2 Connect the stereo connection cables and speakers to suit the system.

Three examples of connection follow. All cables and speakers not included.

**Example 1: To playback 6 channel sound from DVDs
2-A**

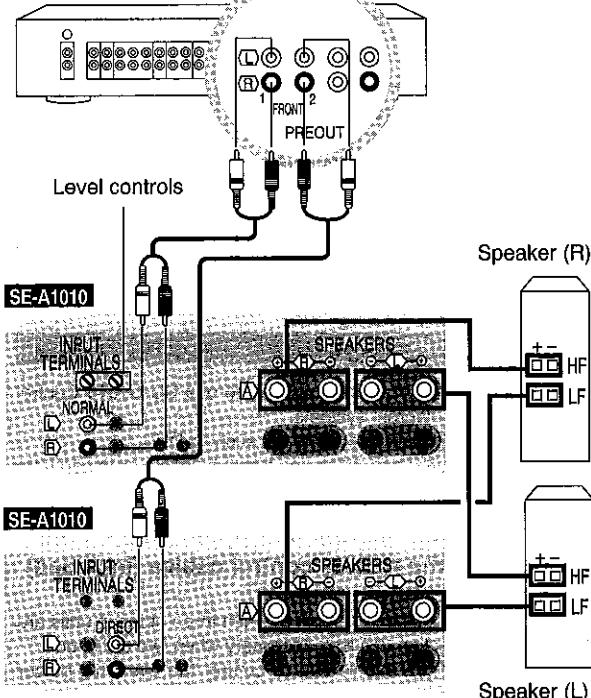

Use one of these units for the front speaker channels (L and R), one for the subwoofer and center channels, and one for the surround channels (L and R).

Read the operating instructions for SU-C1010 and the DVD player carefully for connection and set-up details.

(continued next page)

2-B

SU-C1010

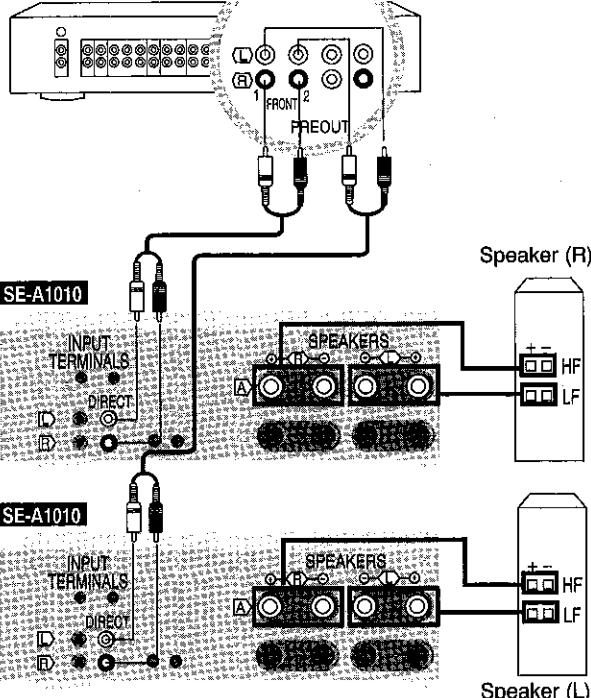

Example 2: For greater control over bass and treble balance
2-B

Use one of these units to control treble (HF) and another to control the bass (LF). Connect to speakers with bi-wiring terminals. Connect the control amplifier to this unit's NORMAL terminals to enable level control. Start adjustments from MAX (maximum).

The example shows connection to enable adjustment of treble for overall bass-treble balance control. If required, the bass can also be connected to the NORMAL terminals to enable L-R balance control.

2-C

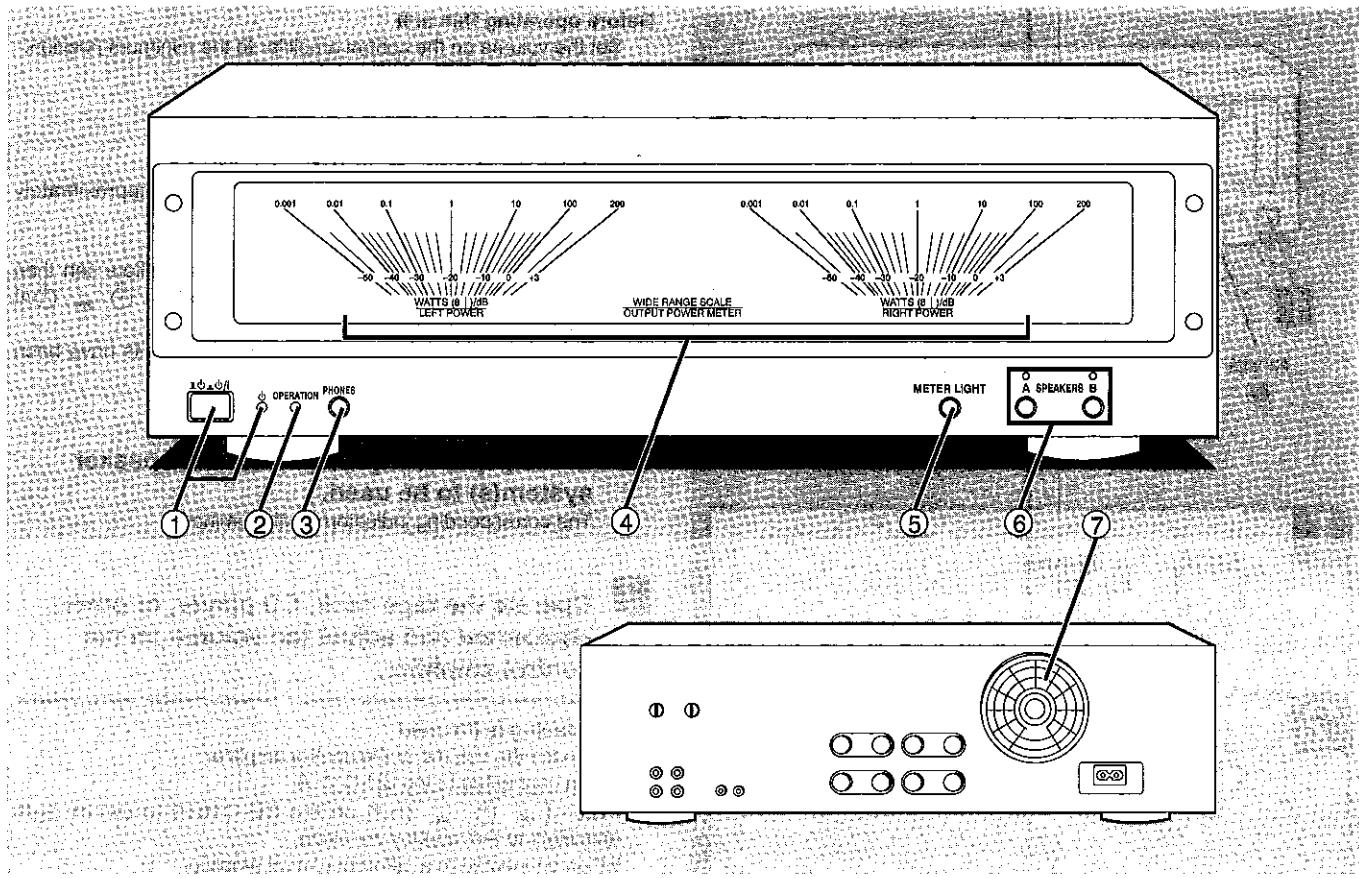

SU-C1010

Example 3: Using these units as monaural amplifiers
2-C

Use one each of these units for the left and right channels. Complete separation of the channels is better and a greater sense of position is achieved.

The example shows connection to speakers with bi-wiring terminals.

■ Names of Parts

No.	Name
-----	------

① Unit on/off button (■ ○ □ ○/□) and remote standby indicator (○)

Use this button to turn the unit on and off.

■ (off): The unit is in standby mode.

□ (on): The unit is on. The unit can be turned on and off from the Technics control amplifier SU-C1010 (sold separately). When the unit is turned off from SU-C1010, it is in remote standby and the indicator lights.

The unit is still using a small amount of power in the standby and remote standby conditions. Standby uses less power.

② Operation indicator (OPERATION)

This indicator illuminates when the power amplifier is in the normal operating condition.

If the (+) and (-) wires of the speaker cables are shorted, or if a circuit abnormality such as DC voltage in the power output to the speakers is detected, the protection circuit will operate and the "OPERATION" indicator will turn off.

③ Headphone jack (PHONES)

No.	Name
-----	------

④ Power meters

Indicate the output (watts) of this unit.

When speakers having an impedance of 8Ω are connected, the output level will be as indicated. However, if the speaker impedance is 16Ω , the output level will be one-half the indicated value, and if the impedance is 4Ω , the output level will be double the indicated value.

$$\text{Actual output} = \frac{\text{meter indication}}{\text{impedance of the speakers}} \times 8 (\Omega)$$

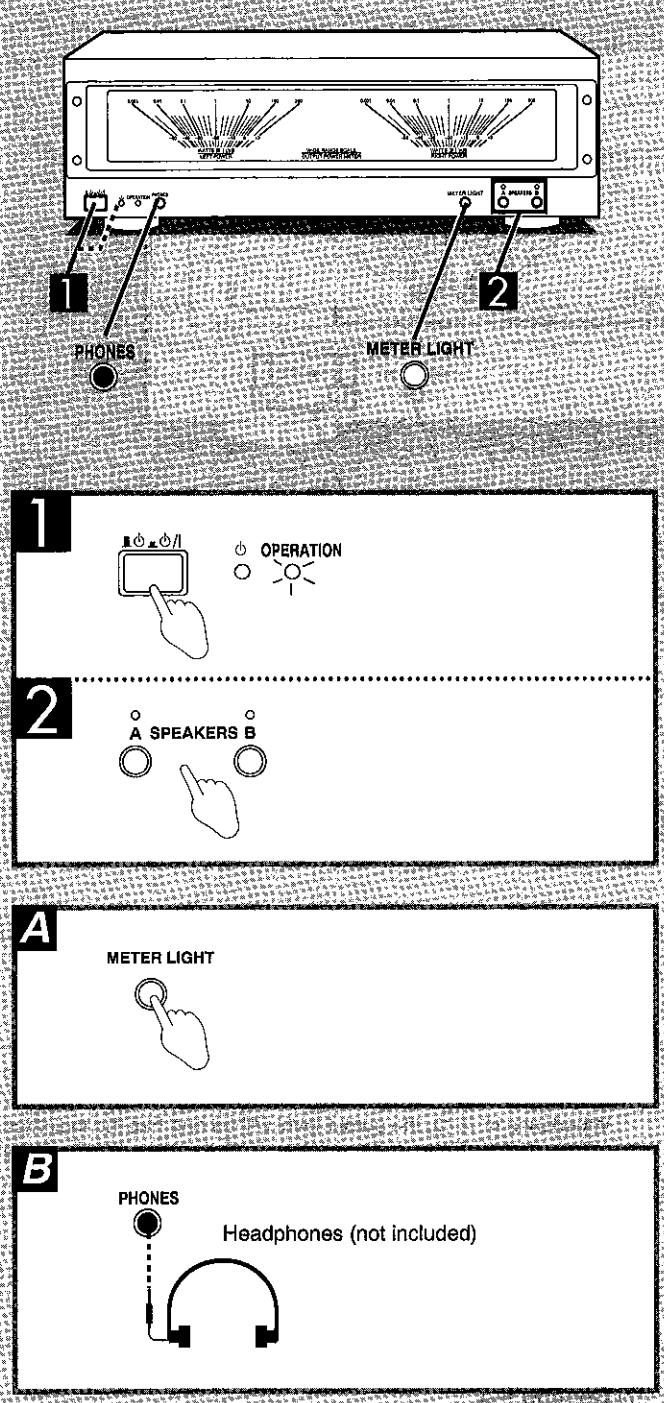

⑤ Power meter light button (METER LIGHT)

⑥ Speaker select buttons/indicators (SPEAKERS)

⑦ Cooling fan

The cooling fan operates at high power output levels only.

■ Operations

Before operating this unit

1. Set the volume on the control amplifier to the minimum position.
2. Turn on the control amplifier.

1 Press [] .

The operation indicator will illuminate after approximately 4 seconds.

If this unit is connected to an SU-C1010

Once this unit has been turned on, both amplifiers can then be turned on or to the standby mode using [] on the control amplifier.

This is possible even when 2 or 3 of these units have been connected.

2 Press [A] and/or [B] to select the speaker system(s) to be used.

The corresponding indicator(s) will illuminate.

3 Operate the tape deck, CD player, or other equipment and adjust the volume on the control amplifier.

After listening is finished

1. Decrease the volume at the control amplifier.
2. When connected to the SU-C1010
Press [] on the SU-C1010 to switch both amplifiers to the standby condition.

When connected to a different control amplifier

First switch this unit to the standby position, and then do the same for control amplifier.

Note

If the unit is turned off while the power meter light is on, a small click will be heard a few seconds later. This is an automatic adjustment by the internal mechanism, not an indication of malfunction.

Turning the power meter light on/off

Press [METER LIGHT].

To listen through headphones

Decrease the volume at the control amplifier, and connect the headphones.

Plug type: 6.3 mm stereo

If sound from speakers is not wanted, press SPEAKER [A] and/or [B] to turn off the speaker indicators.

Note

Avoid listening for prolonged periods of time to prevent hearing damage.

6 Operation Checks and Component Replacement Procedures

- NOTE**
- This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
 - For reassembly after operation checks or replacement, reverse the respective procedures. Special reassembly procedures are described only when required.
 - Select item from the following index when checks or replacement are required.

● Contents

■ Checking Procedures for each P.C.B.

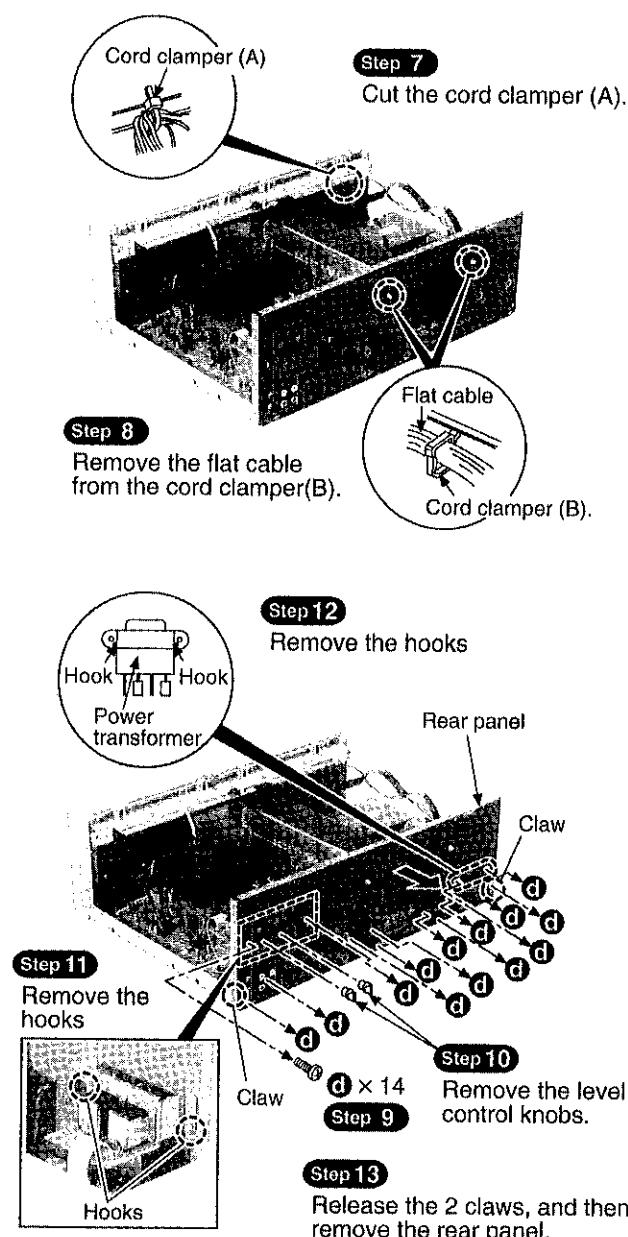

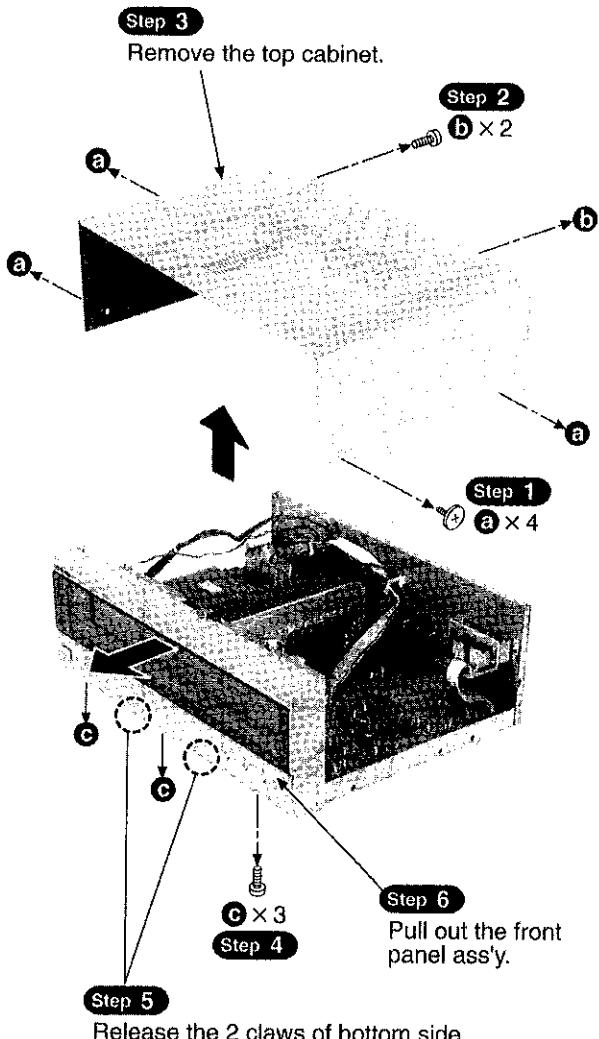

- Checking for the main P.C.B..

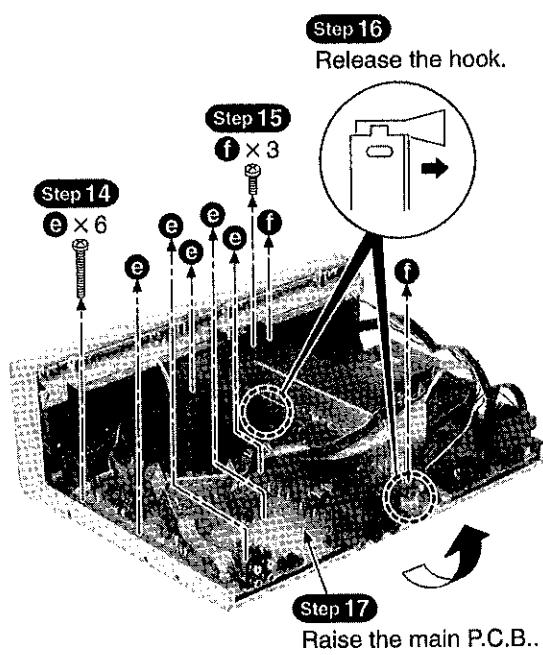

■ Main Component Replacement Procedures

- Replacement for the meter ass'y.
- Replacement for the power IC and regulator transistor.
- Replacement for the fan motor.

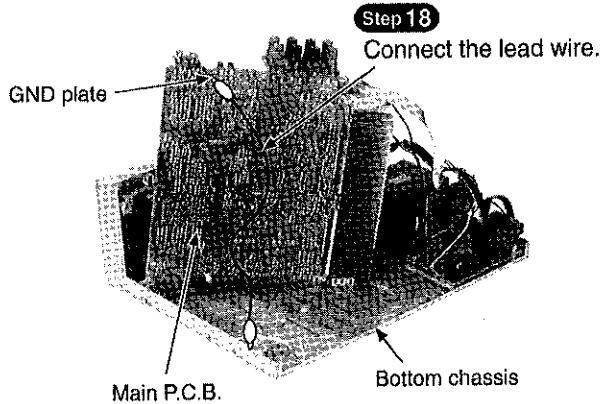

■ Checking Procedures for each P.C.B.

1. Checking for the main P.C.B.

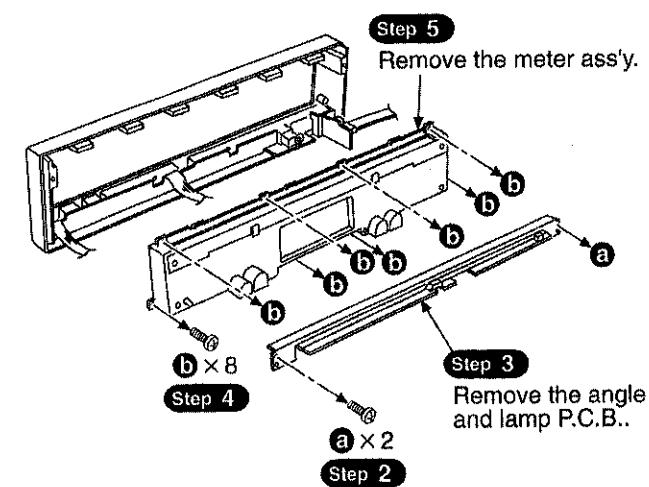

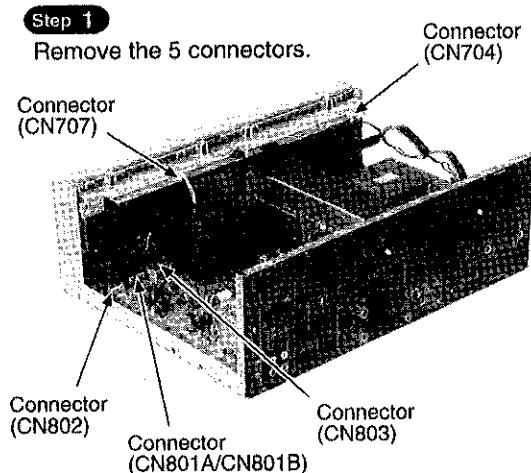

- Check the main P.C.B. as shown below.

■ Main Component Replacement Procedures

1. Replacement for the meter ass'y

- Follow the Step 1 ~ Step 7 of the item 1 in checking procedures for each P.C.B..

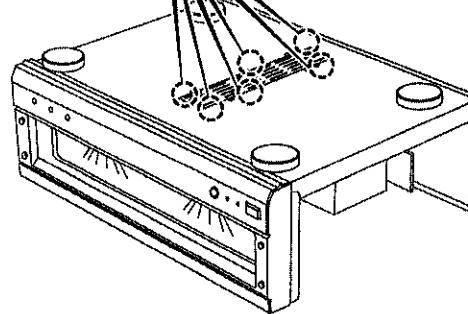

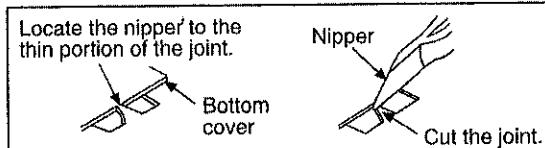

2. Replacement for the power IC and regulator transistor

- Follow the Step 1 ~ Step 3 of the item 1 in checking procedures for each P.C.B..

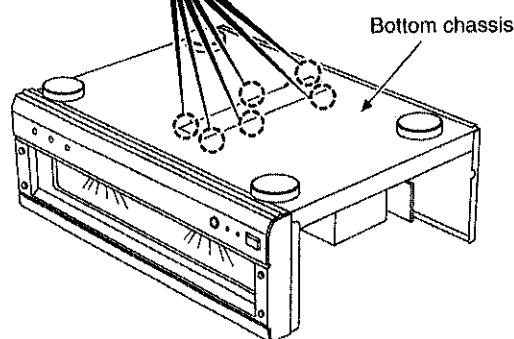

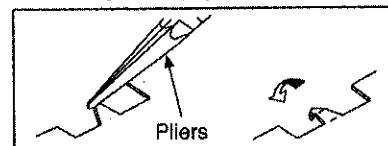

Step 1

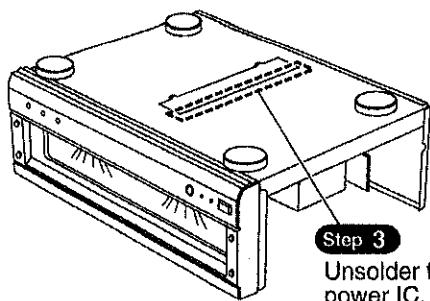

Cut the joints as shown below. (6 portions)

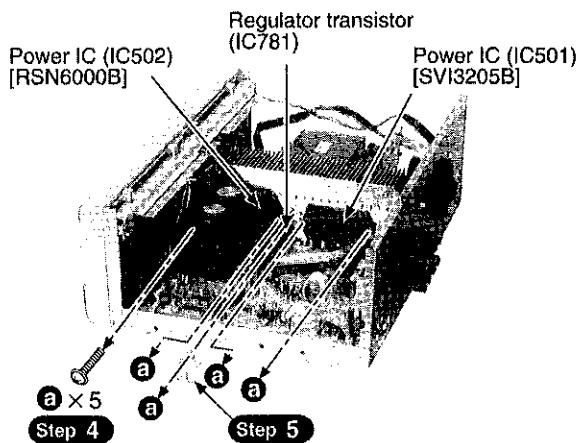

Step 2

Fold the joints. (6 portions)

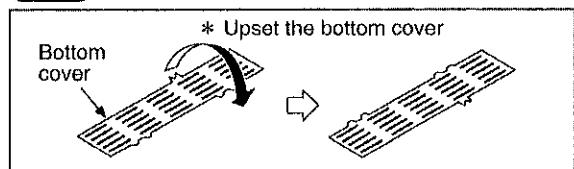

**Step 3**

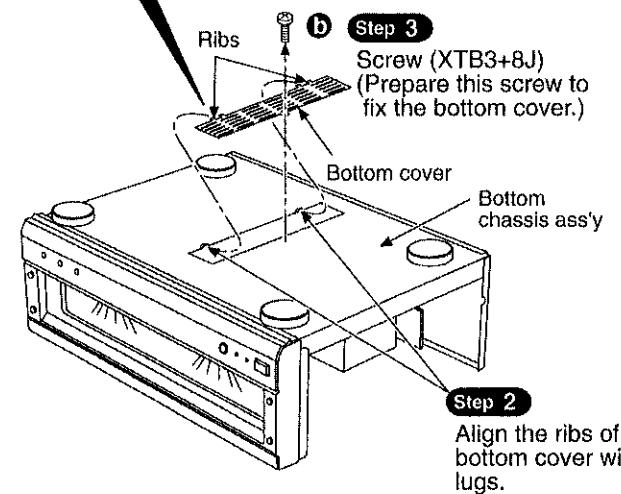

Unsolder the terminals of power IC.

**NOTE**

- After replacing the power IC or regulator transistor, apply a sufficient quantity of compound grease (RFKX0002) between the heat sink and the power IC or regulator transistor (Radiation of power IC and regulator transistor).
- Tighten enough the screws (**a**) after replacing the power IC and regulator transistor. Otherwise, the heat radiation works little.

Installation of the bottom cover after replacement**Step 1**

* Upset the bottom cover

**Step 2**

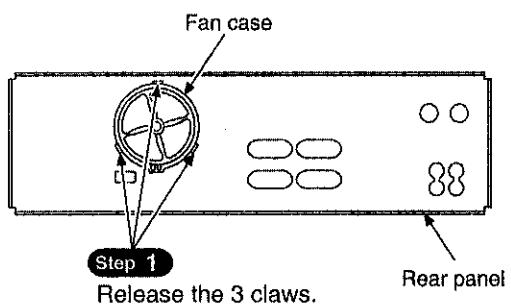

Align the ribs of bottom cover with lugs.

Step 3

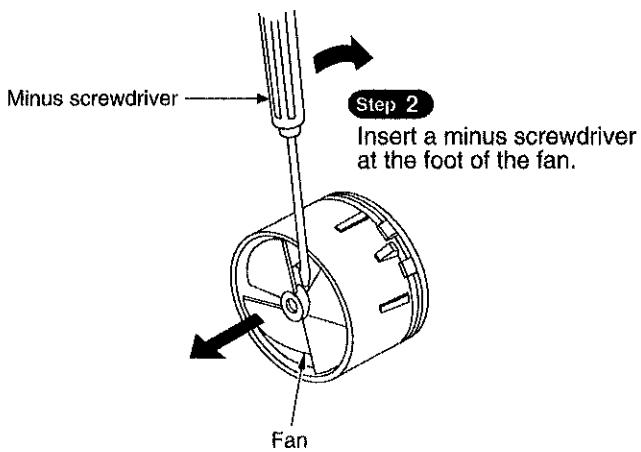

Screw (XTB3+8J)
(Prepare this screw to fix the bottom cover.)

3. Replacement for the fan motor

- Follow the **Step 1** ~ **Step 3**, **Step 8** ~ **Step 13** of the item 1 in checking procedures for each P.C.B..

**Step 1**

Release the 3 claws.

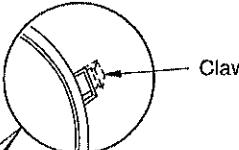

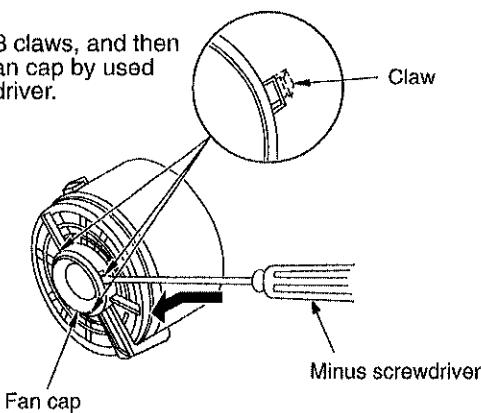

Minus screwdriver

Step 2

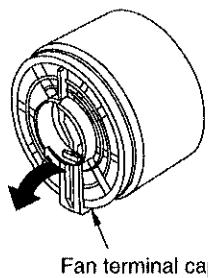

Insert a minus screwdriver at the foot of the fan.

Step 3

Release the 3 claws, and then remove the fan cap by used minus screwdriver.

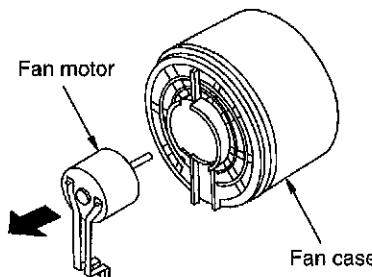

**Step 4**

Remove the fan terminal cap in the direction of arrow.

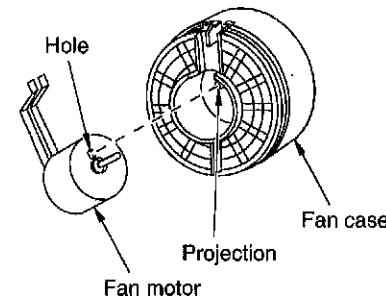

Step 5

Remove the fan motor from the fan case.

**Installation of the fan motor after replacement**

- When mounting the fan motor, align the fan casing's projection with the hole of the fan motor.

8 Schematic Diagram

8.1. Schematic Diagram Notes

- This schematic diagram may be modified at any time with the development of new technology.

Notes:

- S801: Unit on/off switch ()
- S802: Speaker select switch (SPEAKER A)
- S803: Speaker select switch (SPEAKER B)
- S804: Power meter light switch (METER LIGHT)
- VR401,402: Input level control VR (LEVEL CONTROL)
- VR909: Power meter adjustment VR (L ch)
- VR910: Power meter adjustment VR (R ch)

- Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.

No mark : Power ON

• Important safety notice:

Components identified by  mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacturers specified parts shown in the parts list.

• Caution!

IC and LSI are sensitive to static electricity.

Secondary trouble can be prevented by taking care during repair.

Cover the parts boxes made of plastics with aluminum foil.

Ground the soldering iron.

Put a conductive mat on the work table.

Do not touch the legs of IC or LSI with the fingers directly.

10 Wiring Connection Diagram

11 Block Diagram

12 Measurements and Adjustments

12.1. Measuring Instruments and Special Tools

- AC electronic voltmeter (AC EVM)
- AF oscillator

12.2. Power Meter Adjustment

1. Test equipment connection is shown in Fig.1
2. Before turning ON the set, adjust VR909 (L ch) and VR910 (R ch) to mechanical center position. (Shown in Fig.2)
3. Turn the power ON, make sure that the power meter is mechanically adjusted to 0 point. (Shown in Fig.3)

4. Apply a 1 kHz signal to the input terminal so that the output voltage of speaker terminal is 8.9 - 9.0 V. (Adjust the signal level with the attenuator of AF oscillator.)
5. Adjust VR909 (L ch) and VR910 (R ch) so that the power meter indicates 10 W. (Shown in Fig.4)

13 Replacement Parts List

Notes:

- Important safety notice:

Components identified by Δ mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufactures specified parts shown in the parts list.

- The mark in Remarks indicates as follow.

- Language of instruction manual.

<IA> : English, Spanish, Swedish, Russian, Polish, Czech

<IB> : English

<IC> : German, Italian, French

<ID> : Dutch, Danish

- Specify the colours

<K> : For Black Type.

<N> : For Gold Type

- The parenthesized indications in the Remarks columns specify the areas. (Refer to the cover page for area.)

- The marking (RTL) indicates that Retention Time is Limited for this item. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

- All parts are supplied by MESA.
