SPECIFICATIONS

Specifications

•System	Minidisc digital audio system
Recording	Magnetic field modulation direct overwrite
Reading	Non-contact optical system with Semiconductor laser (=780nm)
Sampling frequency:	44.1 kHz
Cording system:	ATRAC
Channel:	2channel, stereo
Frequency response:	10-20000Hz ($\pm 0.3\text{dB}$)
S/N Ratio (PLAY):	90dB
Wow and flutter:	Below measurable limit

•Input

Analog input
(Level/impedance): 500mV/47k Ω

Digital input
(Optical in 1,
Optical in 2) 660nm
Wavelength:

•Output

Analog output
(Level/impedance): 2.0V/600 Ω

•General

Dimensions 196x104x237mm
(WxHxD):
Weight: 2.0kg
Power supply: AC230-240V, 50Hz
Power consumption: 12W

Notes:

- 1.Design and specifications are subject to change without notice.
- 2.Dimensions and weight are approximate.
- 3.Total harmonic distortion is measured by the digital spectrum analyzer.

⚠ WARNING

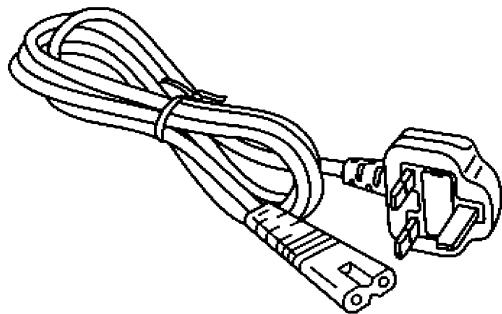

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

2. Precaution of Laser Diode

CAUTION:

This product utilizes a laser diode with the unit turned "on", invisible laser radiation is emitted from the pickup lens.

Wave length: 780 nm

Maximum output radiation power from pickup: 100 μW/VDE

Laser radiation from the pickup lens is safety level, but be sure the followings:

1. Do not disassemble the optical pickup unit, since radiation from exposed laser diode is dangerous.
2. Do not adjust the variable resistor on the pickup unit. It was already adjusted.
3. Do not look at the focus lens using optical instruments.
4. Recommend no to look at pickup lens for a long time.

ACHTUNG:

Dieses Produkt enthält eine Laserdiode. Im eingeschalteten Zustand wird unsichtbare Leserstrahlung von der

Laserinheit abgestrahlt.

Wellenlänge: 780 nm

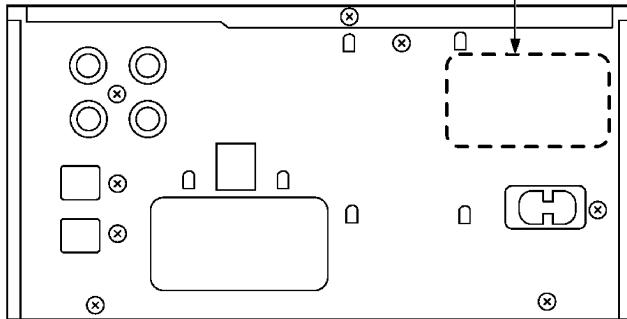

Maximale Strahlungsleistung der Lasereinheit: 100 μW/VDE

Die Strahlung der Lasereinheit ungefährlich, wenn folgende Punkte beachtet werden:

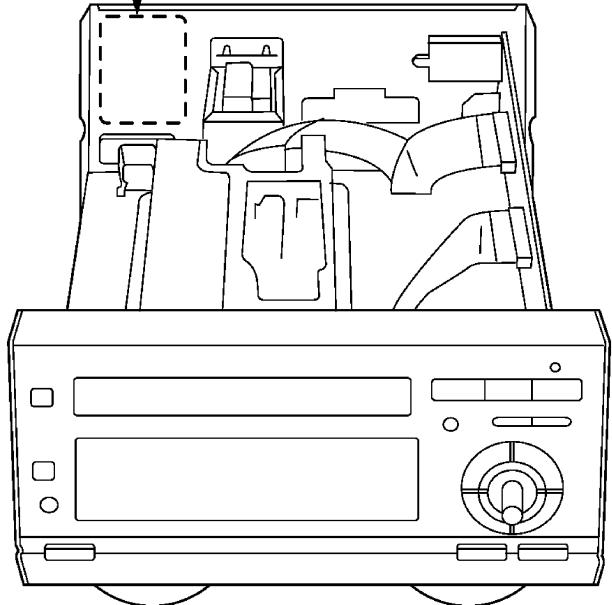

1. Die Lasereinheit nicht zerlegen, da die Strahlung an der freigelegten Laserdiode gefährlich ist.
2. Den werkseitig justierten Einstellregler der Lasereinheit nicht verstehen.
3. Nicht mit optischen Instrumenten in die Fokussierlinien blicken.
4. Nicht über längere Zeit in die Fokussierlinien blicken.

4. Operating Instructions

5. Handling Precautions for Traverse Deck (MD Unit)

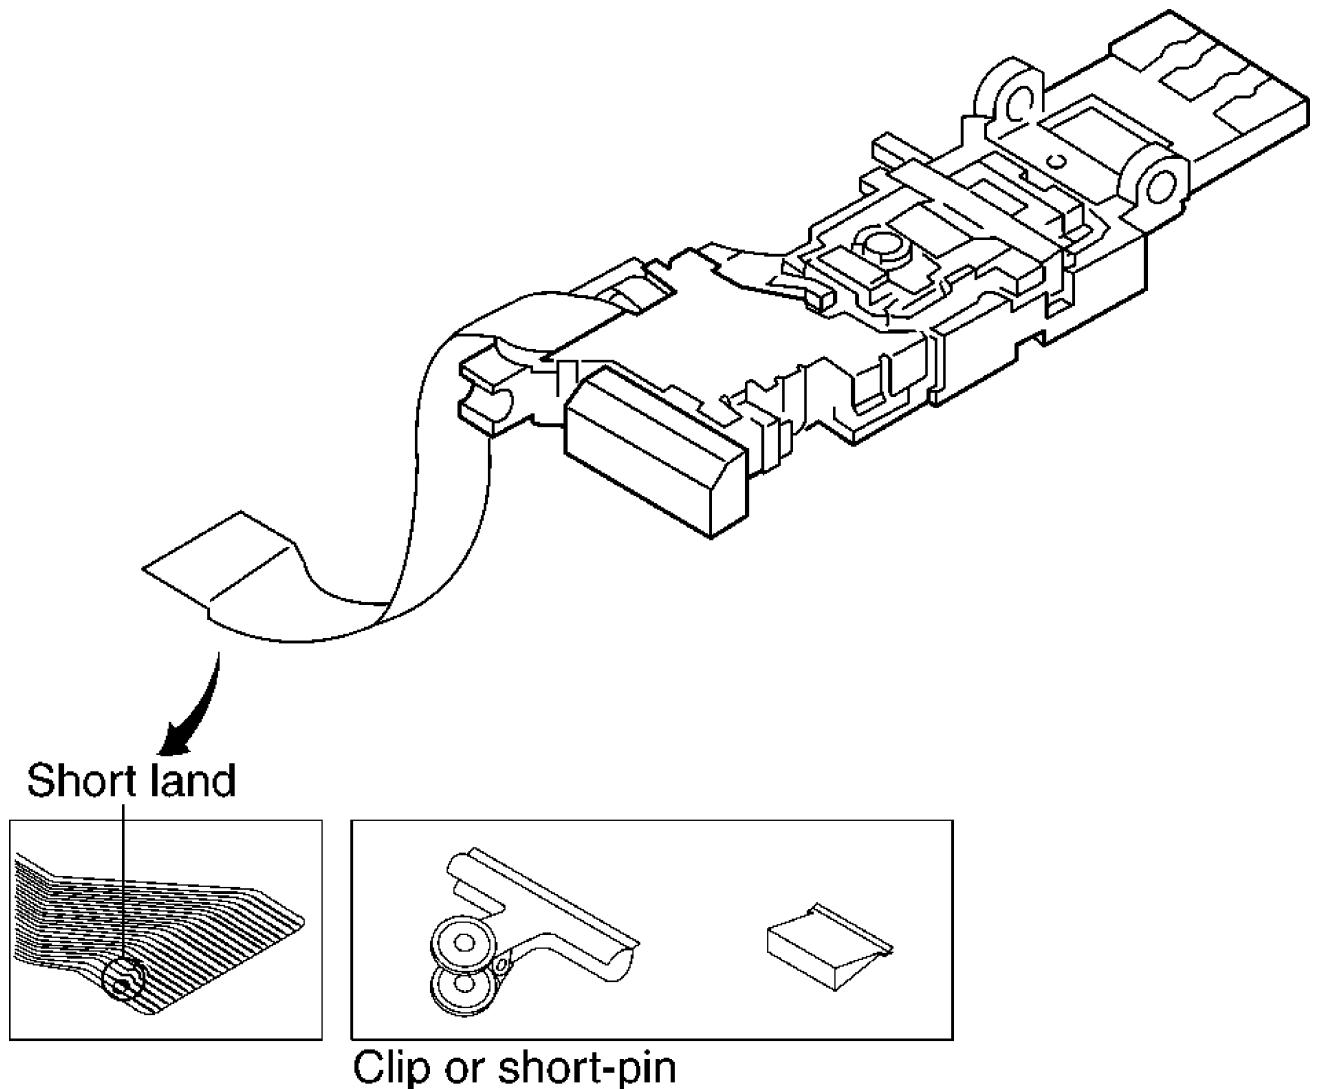

The laser diode in the MD unit (optical pickup) may break down due to potential difference caused by static electricity of clothes or human body. So, be careful of

electrostatic breakdown during repair of the MD unit (optical pickup).

5.1. Handling of MD Unit (optical pickup)

1. Do not subject the MD unit (optical pickup) to static electricity as it is extremely sensitive to electrical shock.
2. The short land between the No. 25 (LD-GND) and No. 24 (LD) pins on the flexible board is shorted with a solder build-up to prevent damage to the laser diode. (As shown in Fig. 1.)
To connect to the PC board, be sure to open by removing the solder build-up, and finish the work quickly.
3. Take care not to apply excessive stress to the flexible board (FFC).
4. Do not turn the variable resistor (laser power adjustment). It has already been adjusted.

Fig. 1

5.2. Grounding for electrostatic breakdown prevention

1. Human body grounding

Use the anti-static wrist strap to discharge the static electricity from your body.
(As shown in Fig. 2.)

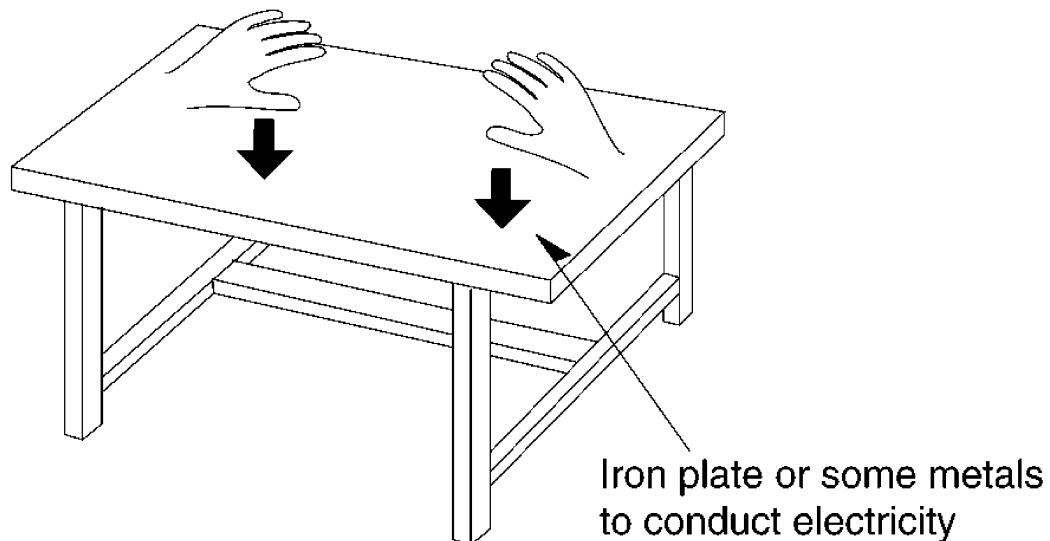

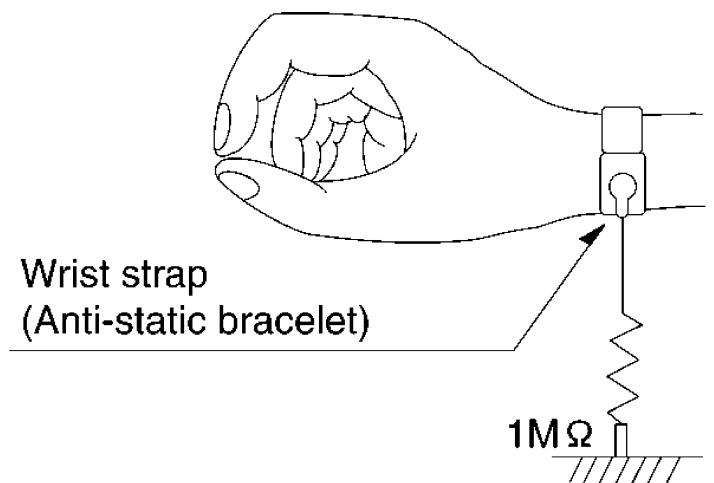

2. Work table grounding

Put a conductive material (sheet) or steel sheet on the area where the optical pickup is placed, and ground the sheet.

Caution:

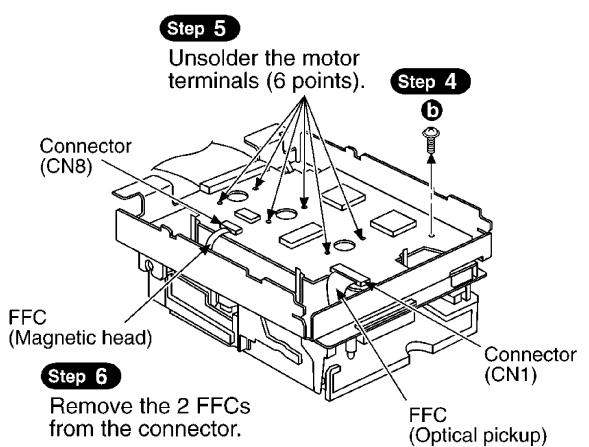

The static electricity of your clothes will not be grounded through the wrist strap.
So, take care not to let your clothes touch the traverse deck (optical pickup).

Fig. 2

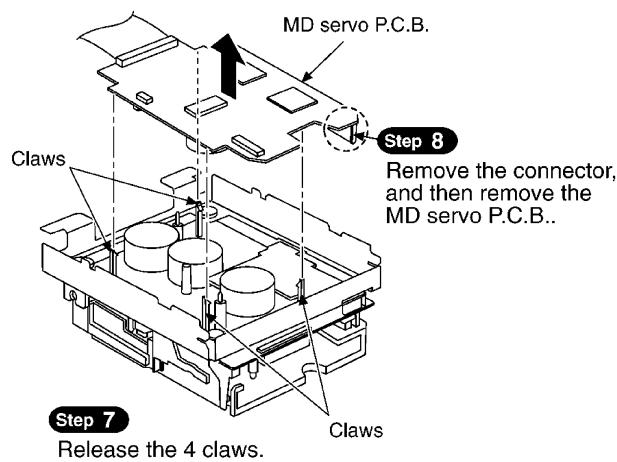

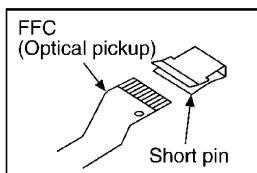

6. Operation Checks and Main Component Replacement

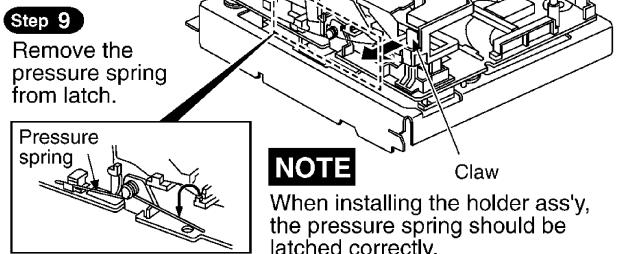

Procedures

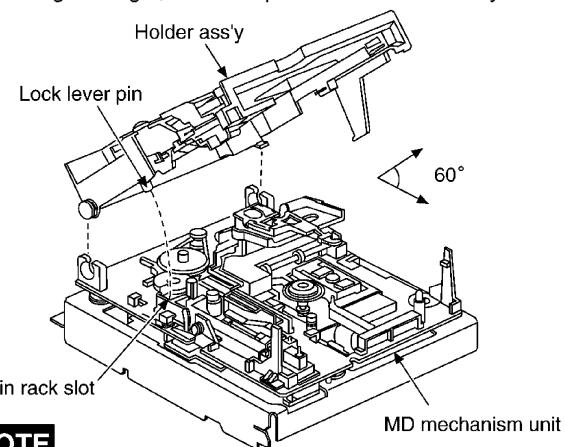

NOTE
Insert a short pin into the traverse unit FFC board.
(Refer to "Handling Precautions for Traverse deck".)

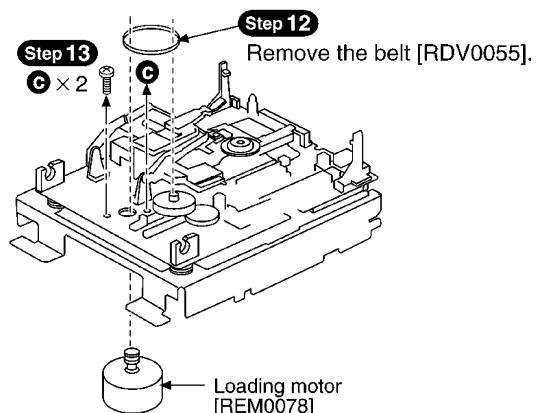

Step 10
Release the 2 claws, and then lift up the holder ass'y.

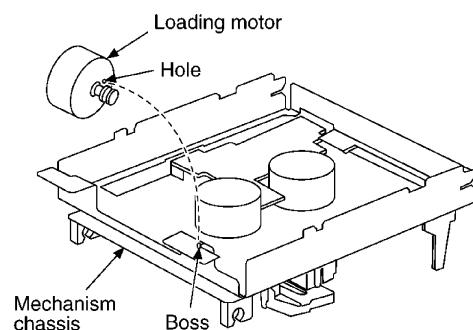

Step 11
Set the holder ass'y and MD mechanism unit at a 60 degree angle, and then pull out the holder ass'y.

NOTE
When installing the holder ass'y, align the lock lever pin with the main rack slot.

Notice for installing the loading motor

- Align the hole of loading motor with the boss of mechanism chassis, and then install the loading motor.

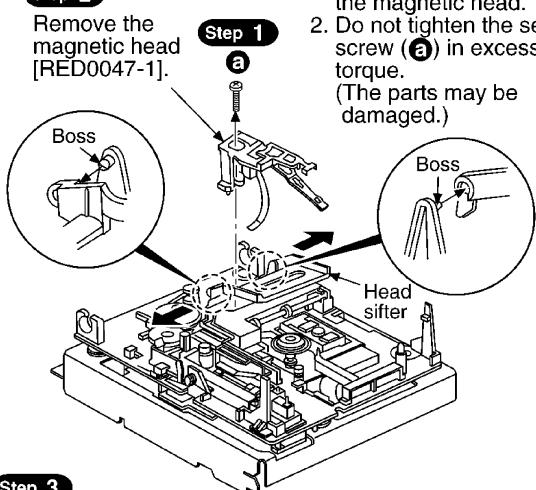

3. Replacement for the traverse motor ass'y

- Follow the **Step 1** ~ **Step 3** of the item 1 in checking procedure for each P.C.B..
- Follow the **Step 1** ~ **Step 11** of the item 2 in main component replacement procedures.

NOTE

Step 2

Remove the magnetic head [RED0047-1].

Step 1

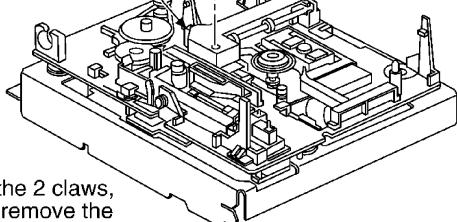

- Take care not to damage the magnetic head.
- Do not tighten the set screw (a) in excessive torque.
(The parts may be damaged.)

Step 3

Spread the lugs of head shifter, and then release the lugs from boss.

Step 4

b
REF base
Claw

Step 5

Release the 2 claws, and then remove the REF base.

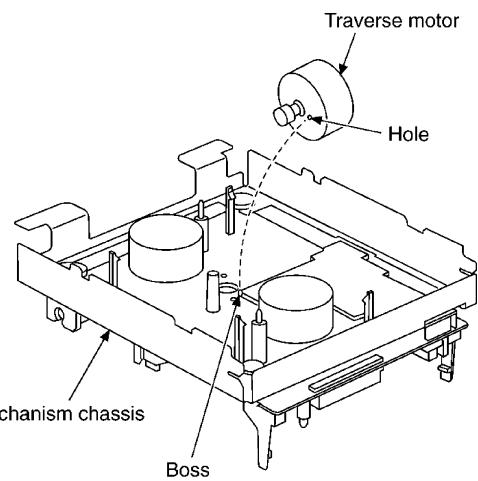

Step 6

C × 2

Notice for installing the traverse motor

- Align the hole of traverse motor with the boss of mechanism chassis, and then install the traverse motor.

7. Self-Diagnostic Function

This unit is equipped with a self-diagnostic function which, in the event of a malfunction, automatically display a code indicating the nature of the malfunction. Use this self-diagnostic function when servicing the unit.

7.1. Switching to the Self-Diagnostic Mode

1. Turn the power on.
2. Press and hold the STOP button for at least 2 seconds, and while still pressing the STOP button, press the FWD SEARCH button for at least 2 seconds. (Refer to [Fig.1](#).) The unit enters Self-Diagnostic Mode and is displayed “MD TEST”. Then an error code is displayed, if any. For details of the error codes, refer to [Fig.2](#). In the case of no errors, “*****” is displayed on FL.
3. If more than one error exists, the display will sequentially show the respective error codes each time the FWD SEARCH button is pressed.

7.2. Canceling the Self-Diagnostic Mode

1. The Self-Diagnostic Mode can be canceled by pressing the POWER button (POWER) to turn the system off. And then pressing the power button again to turn it again.

7.3. Clearing the Self-Diagnostic Mode

1. The contents of abnormality display are stored in memory. In order to clear the memory, continue to press the STOP button for at least 5 seconds while in the Self-Diagnostic Mode. The memory will clear. Always be sure to clear this memory after completing repair.

Error	Symptom	Possible Cause
F15	Interval till MD starts playing is too long.	<ul style="list-style-type: none"> Pickup home position sense switch (S8) is defective; check and replace if necessary.
F26	MD is loaded but cannot be played.	<ul style="list-style-type: none"> Communications error between the servoprocessor IC and the microprocessor IC (system control). Check if the flexible circuit board is disconnected. Displayed when the disc is scratched too.
F28	MD cannot be loaded.	<ul style="list-style-type: none"> Confirm that the disc is not catching on anything. The connection (flexible circuit board or connector cable) between the MD unit and the MD servo circuit board is disconnected or damaged; check and replace if necessary. The MD unit may be malfunctioning; replace it.
F29	MD cannot be ejected.	<ul style="list-style-type: none"> Confirm that the disc is not catching on anything. The connection (flexible circuit board or connector cable) between the MD unit and the MD servo circuit board is disconnected or damaged; check and replace if necessary. The MD unit may be malfunctioning; replace it.

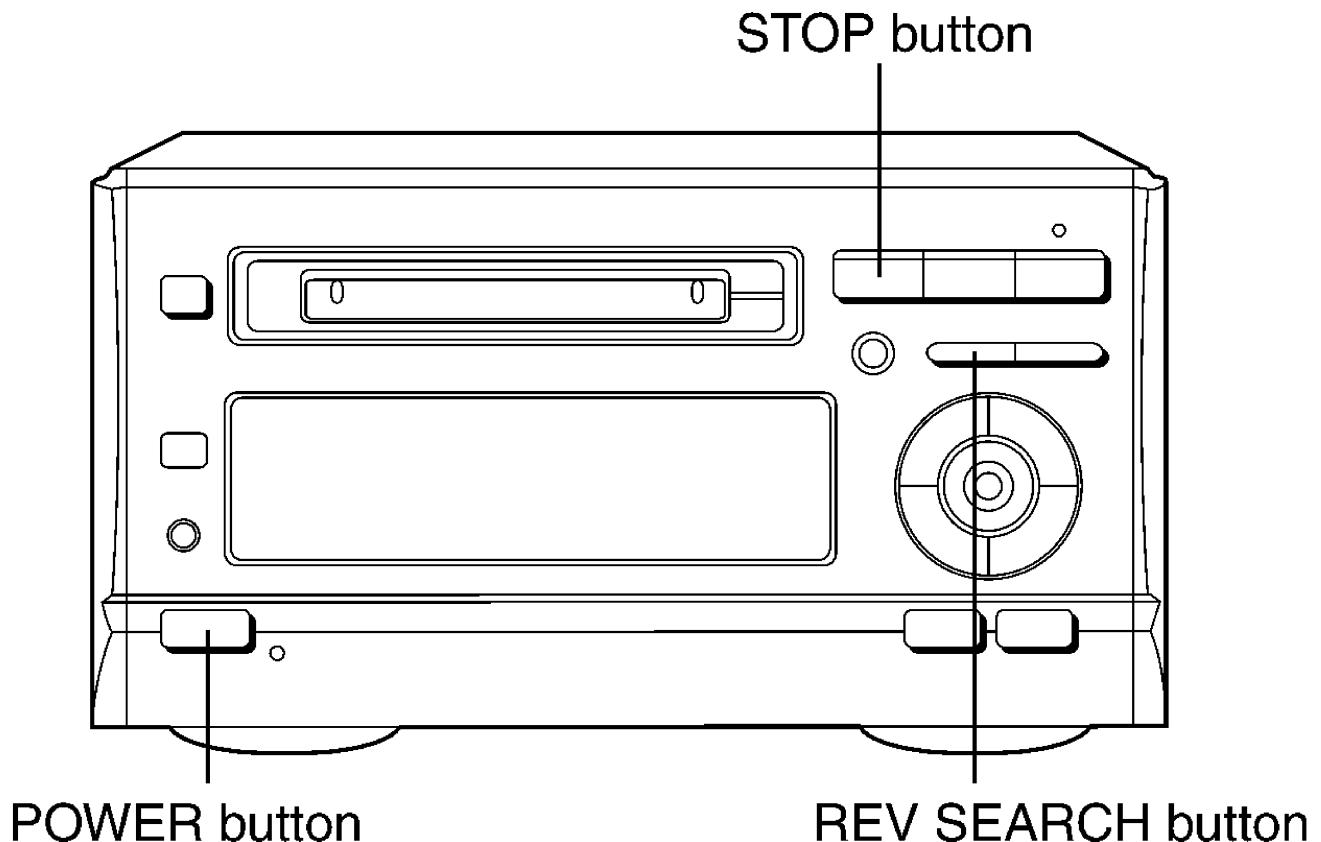

8. Self Check Function

This unit is equipped with a self check function which can detect a part of malfunction. Use this function before servicing the unit and check the item as shown below.

8.1. Setting to the Self Check Function

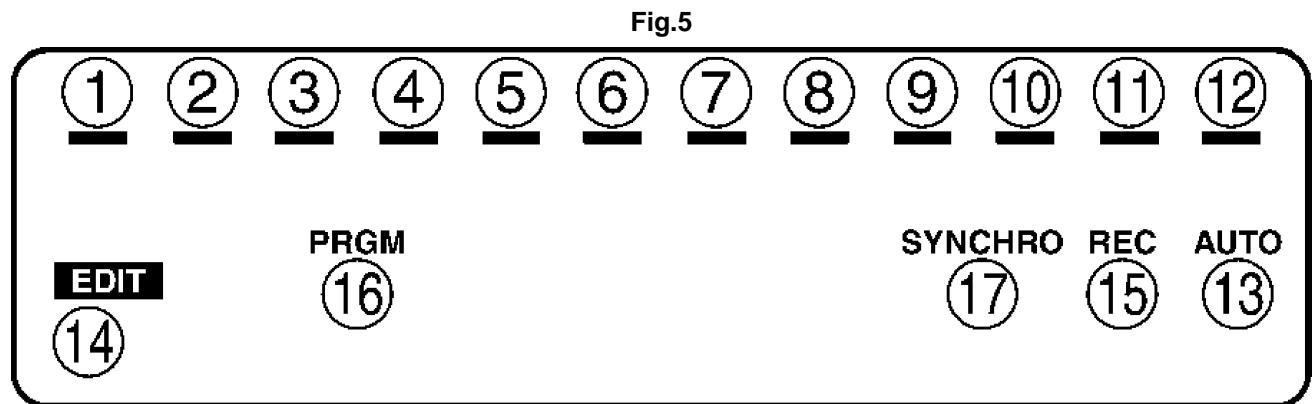

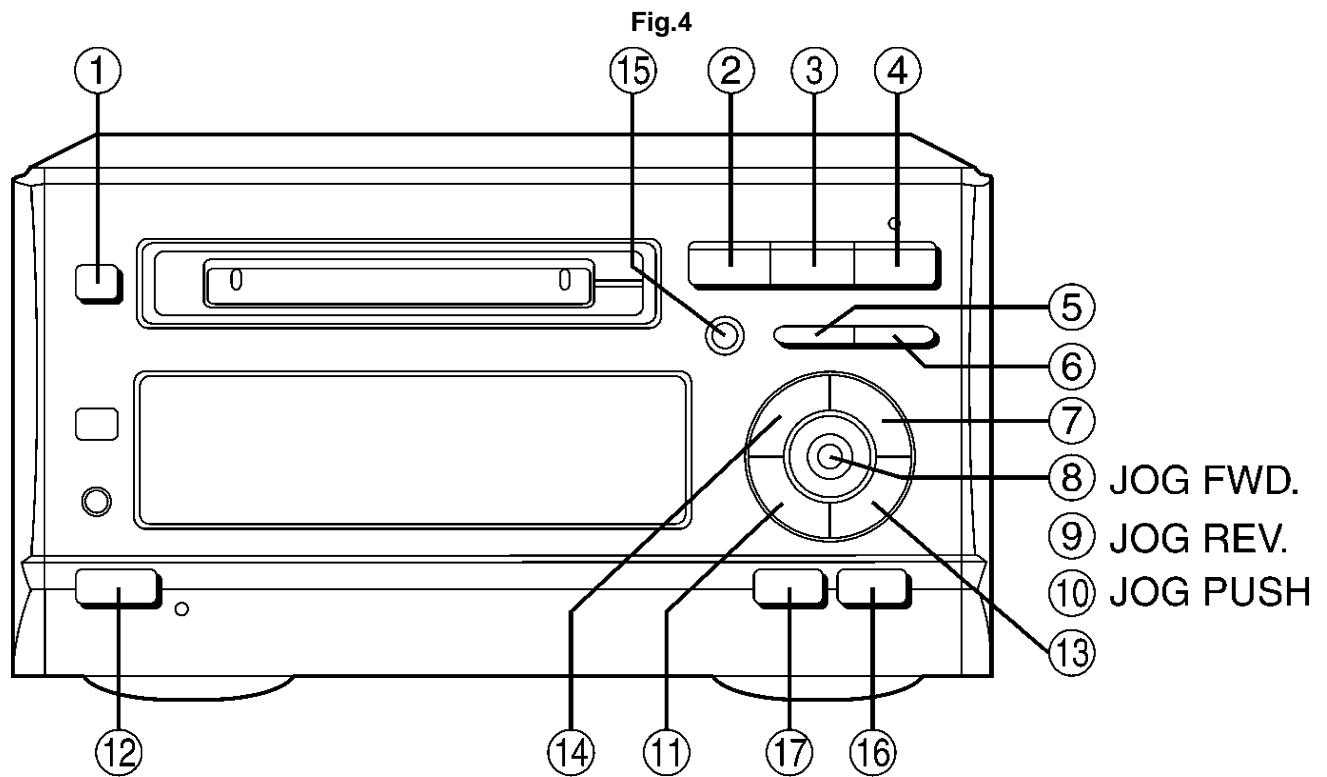

1. Turn the power on.
2. Press and hold the STOP button for at least 2 seconds, and while still pressing the STOP button, press the REV. SEARCH button for at least 2 seconds. Then the unit enters Self Check Function. (Refer to [Fig.3](#).)

Fig.3

8.2. Checking the operation switches

1. When the unit enters the Self Check Function, the FL display turn off.
2. Press the buttons on the unit except the INPUT SELECTOR button, it displays “-” mark adapted each buttons.
([Fig.4](#) and [Fig.5](#) is shown about a allotment.)

8.3. Checking the FL display

1. Press the INPUT SELECTOR button.
2. All buttons works normally except the POWER button, FL display and LED turns on and off at 0.5 second interval.
 (Refer to [Fig.6](#) and [Fig.7](#).)

Fig.6

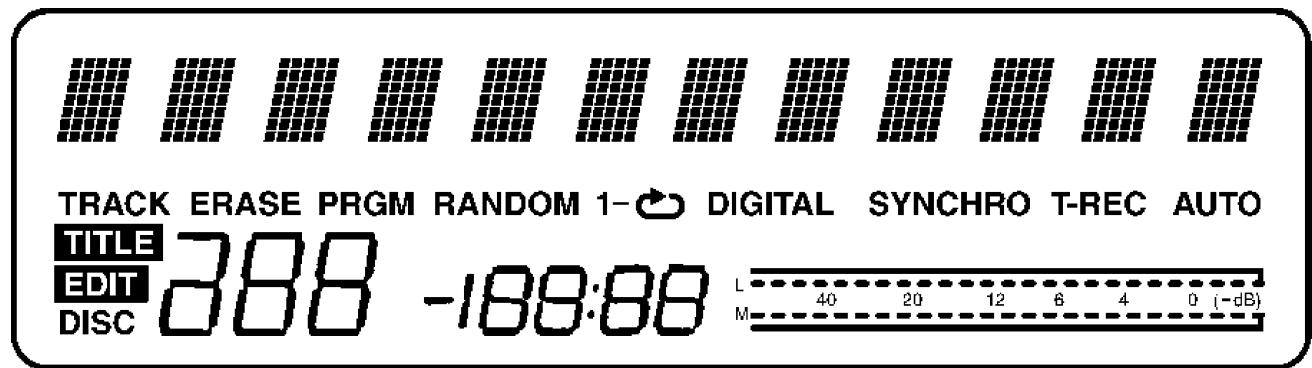

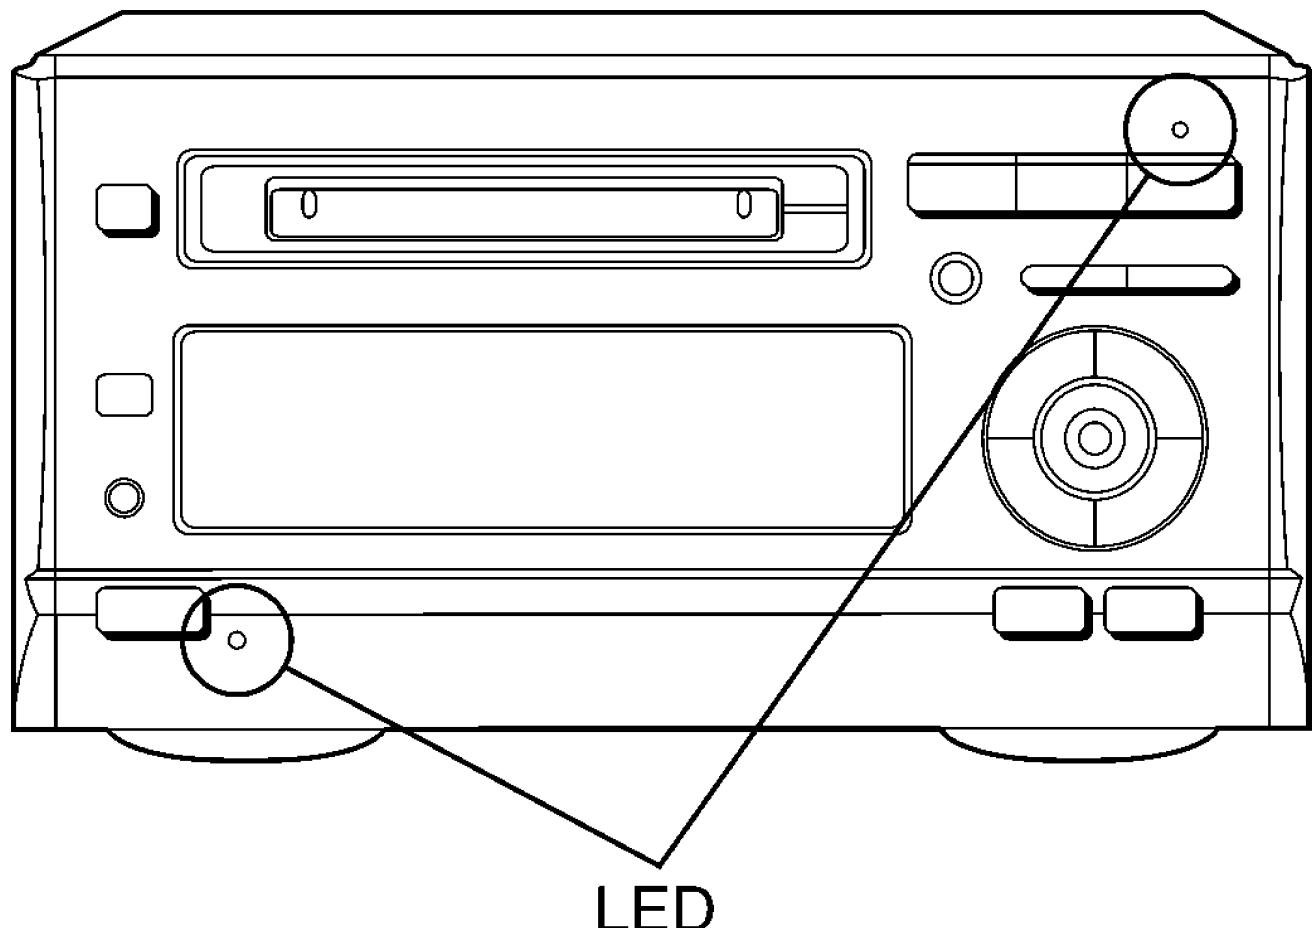

Fig.7

The Self Check Function can be canceled by pressing and holding the STOP button for at least 2 seconds.

9. Measurements and Adjustments (Laser Power Adjustment)

Note:

- If you exchange parts of MD unit when you repair, you must perform the Laser Power adjustment.

- Because this unit uses the optical magnetic recording, the unit outputs over 10 times more laser than a CD player does. In the adjustment mode, the laser is always being output. Therefore, be especially careful not to look laser beam directly or to touch the laser beam when adjusting the unit and checking its operation.

9.1. Necessary Instruments

- Laser power meter (LE8010) or cartridge type laser power meter
- Test disc (Pre-mastered disc RFKV0006 or RFKV0014)
- Recordable disc available on sales route (with music recorded)
- Insulated driver for adjustment such as a ceramic driver
- Remote control transmitter

9.2. Set the Unit to the Adjustment Mode

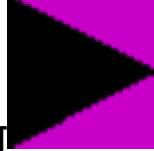

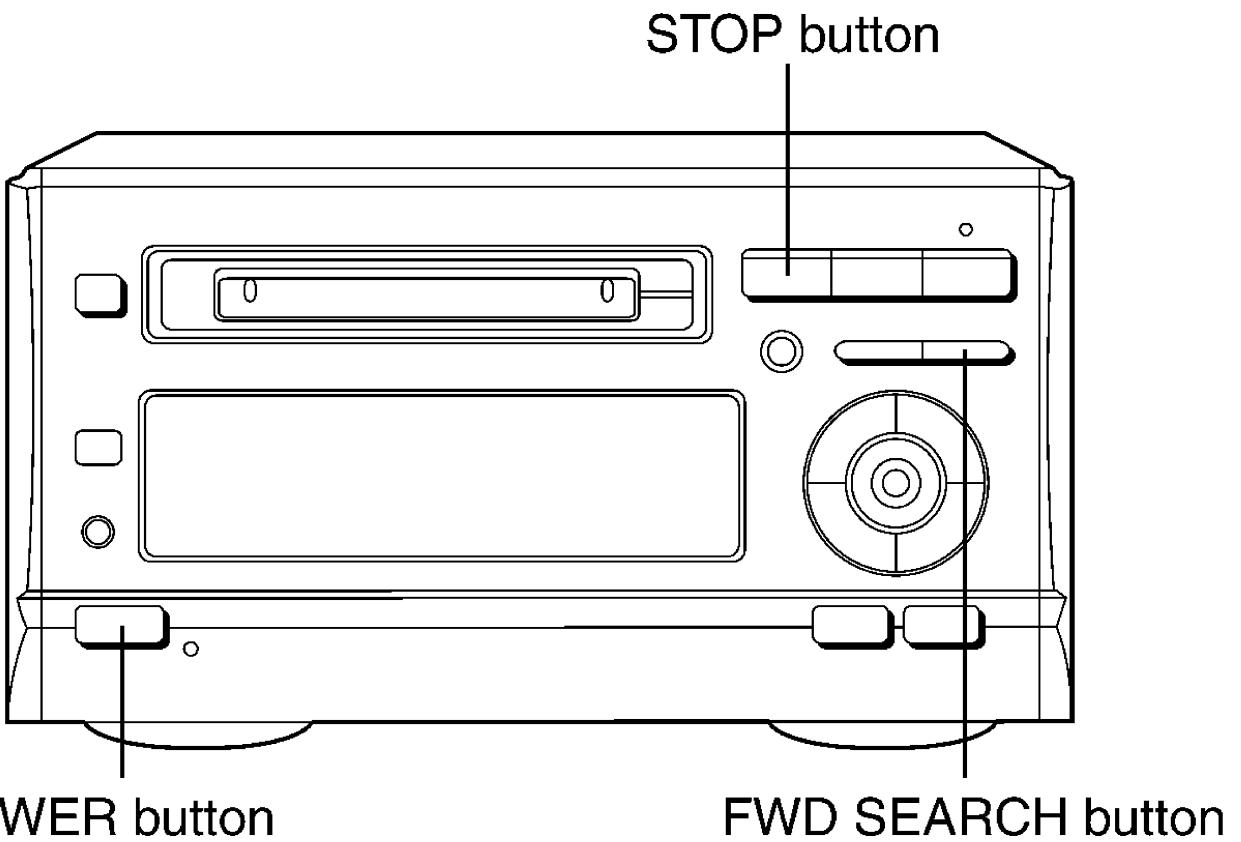

1. Supply power to the unit.
2. With no MD loaded in the player, simultaneously press the [■ STOP] button and the  FWD. SEARCH] button and hold them both pressed for at least 2 seconds until “MD TEST” appears in the display. (Refer to [Fig.8](#).)
3. At the Self-Diagnostic Mode, press “1” on the player’s remote control. “RAM LASER” will be displayed to indicate the read power adjustment mode.

Cautions

1. About handling the MD unit

- The magnetic head is a precision unit and is very fragile. Do not deform it.
- Laser diode in the optical pickup may be destroyed by the static electricity generated in your clothes or body. Be especially careful with the static electricity.
- The optical pickup is structured extremely precisely. Do not subject to the strong impact or shock. Do not touch the lens.

2. About handling the magnetic head

When replacing the magnetic head, do not tighten the mounting screw (RHD17022) too firmly. If the screw is tightened too much to deform the resin, the position of the head is moved, and this affects its recording operation.

Recommended torque for mounting screw: 700 g cm +/- 100 g cm

Reference: This is the same force as using a screwdriver with a 15-mm diameter grip, you fasten the screw naturally with your thumb and index finger.

3. About the driver for adjusting laser power

Use only insulated driver such as a ceramic driver. With the metal driver, it is not possible to adjust properly because of the induction noise. Also, if it short-circuits with the chassis, it may destroy or damage the laser diode.

Recommended driver: VESSEL 9000 1.8 -30 (Ceramic driver)

Cautions on optical pickup:

- The optical pickup and the magnetic head are structured precisely; therefore, they are very fragile. Be careful not to touch them with the edge of the laser power meter.
- The sensor of the laser power meter is a very fine part. Be careful not to touch it to the optical pickup lens.
- The focus point of the laser reaches to 356°F. Therefore, avoid adjusting using laser power for a long time because the sensor of the laser power meter may be burned.
- Do not allow the write power to even momentarily reach or exceed 5.5 mW. Doing so will result in damage to the optical pickup.
- Do not set the unit to the laser power adjustment mode with the MD loaded. Doing so may result in damage to the MD.

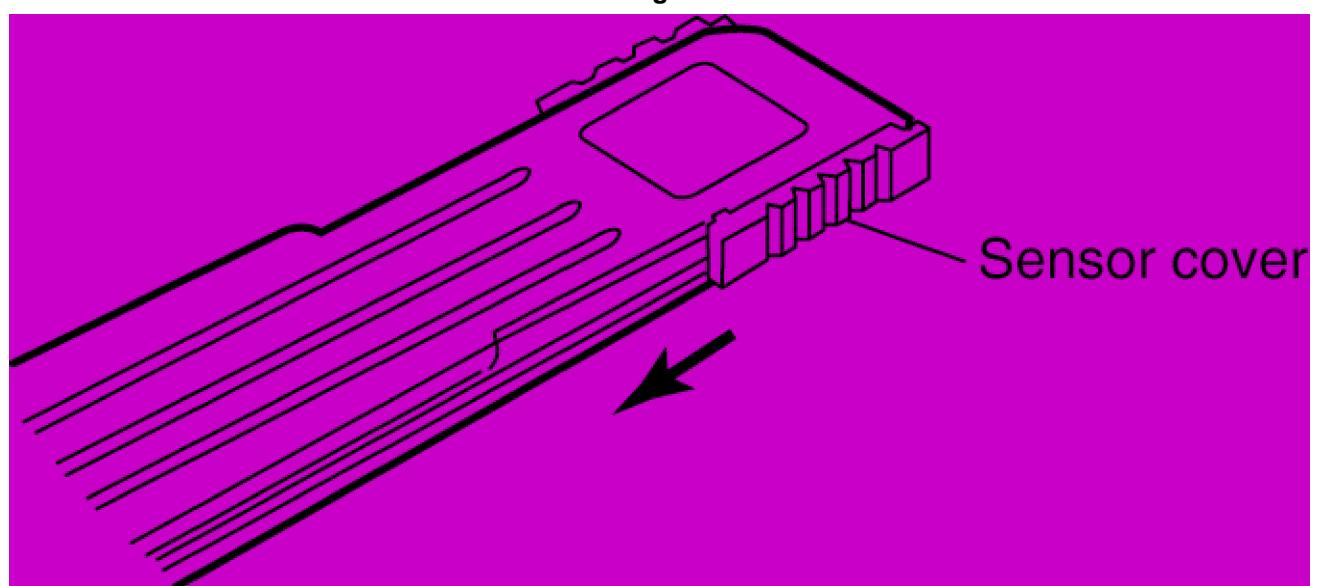

9.3. Adjustment Procedure

Note:

There are two methods of adjusting the player, either by using a laser power meter or by using a cartridge type laser power meter.

1. Enter the Adjustment Mode.
2. If using a laser power meter, slide open the sensor cover. (Refer to [Fig.9](#).)

Fig.9

3. If using a laser power meter, position the sensor directly above the optical pickup. (Refer to [Fig.10](#).)

If using a cartridge type laser power meter, load the cartridge into the MD

mechanism. (Refer to [Fig.11](#).)

Caution:

Do not allow the laser power meter to come in contact with either the optical pickup or the magnetic head.

Fig.10

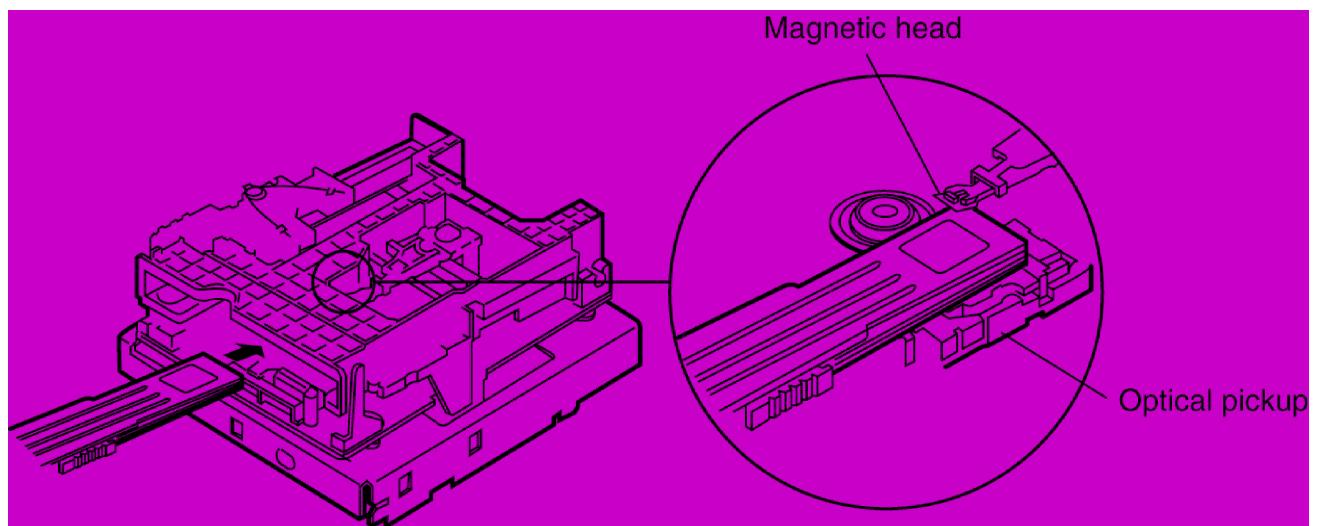

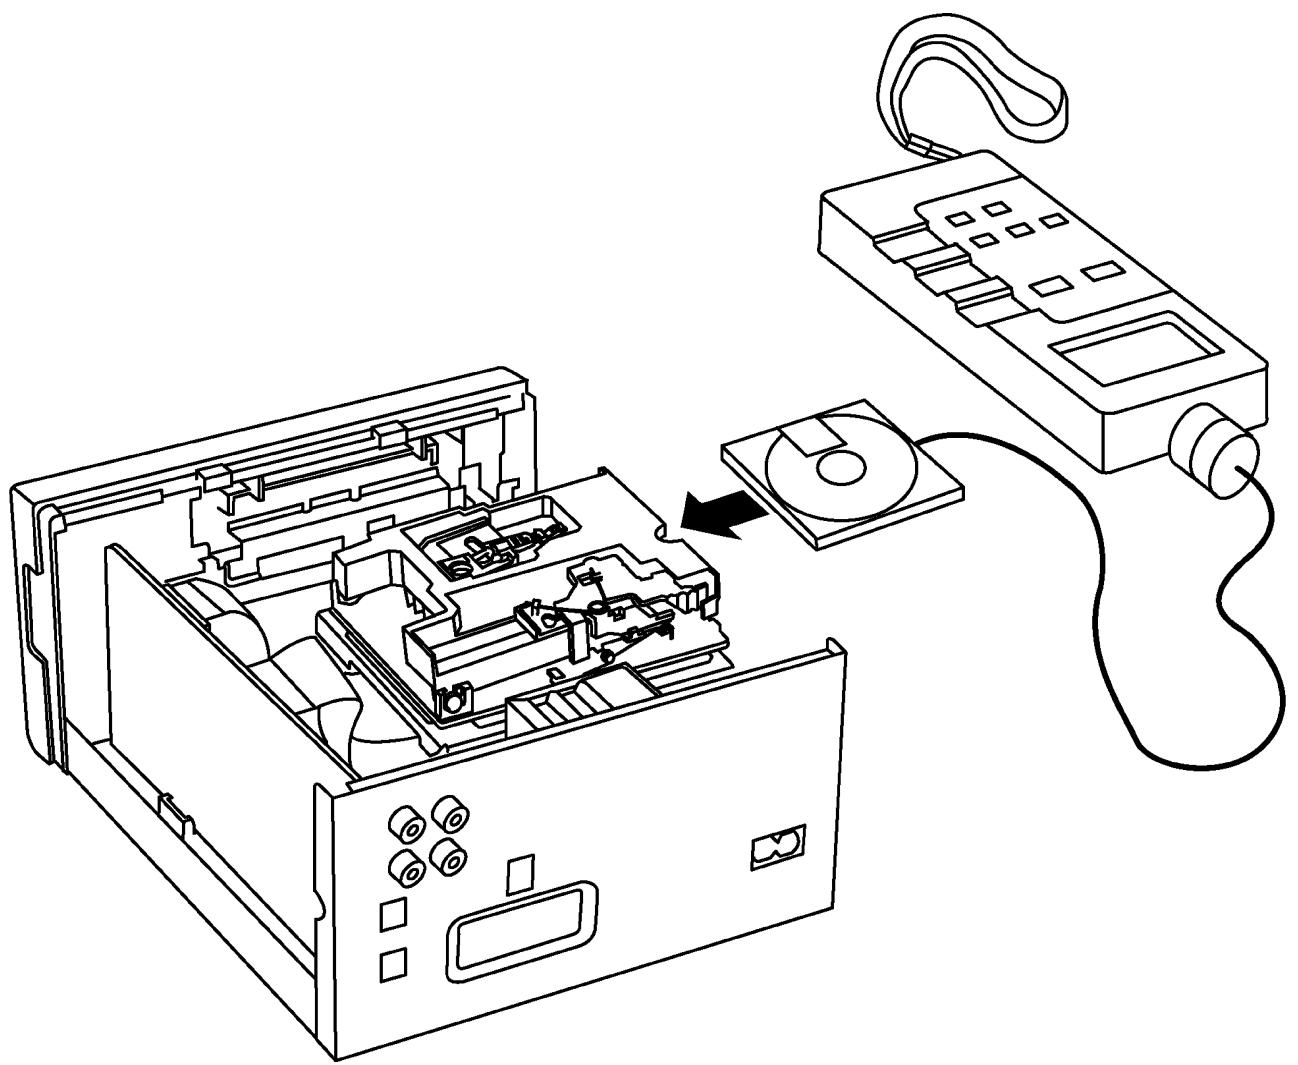

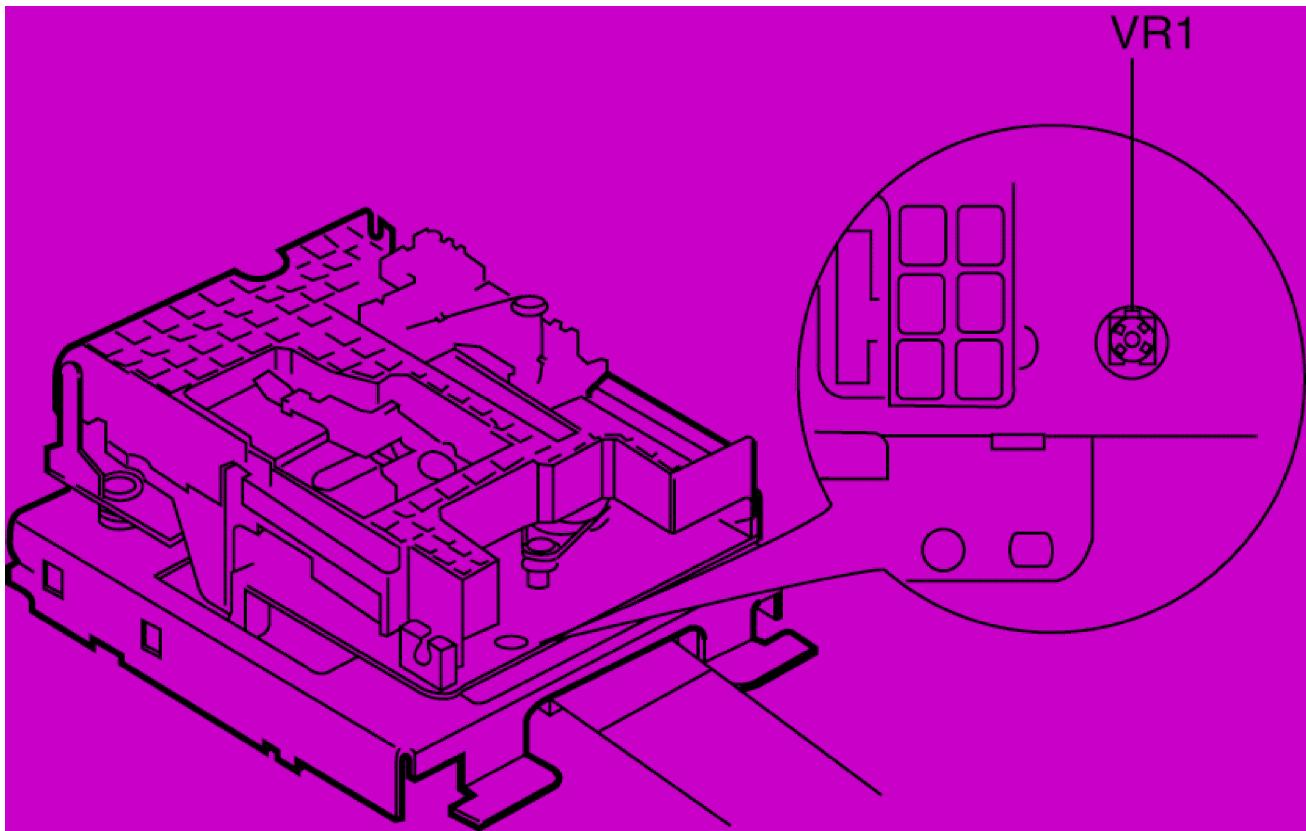

Fig.11

4. Confirm that the reading of the laser power meter or cartridge type laser power meter is within the specified. If it is not within the specified range, adjust by turning VR1. (Refer to [Fig.12](#).)
Specified range (read power): $600\mu\text{W}$ or lower

Fig.12

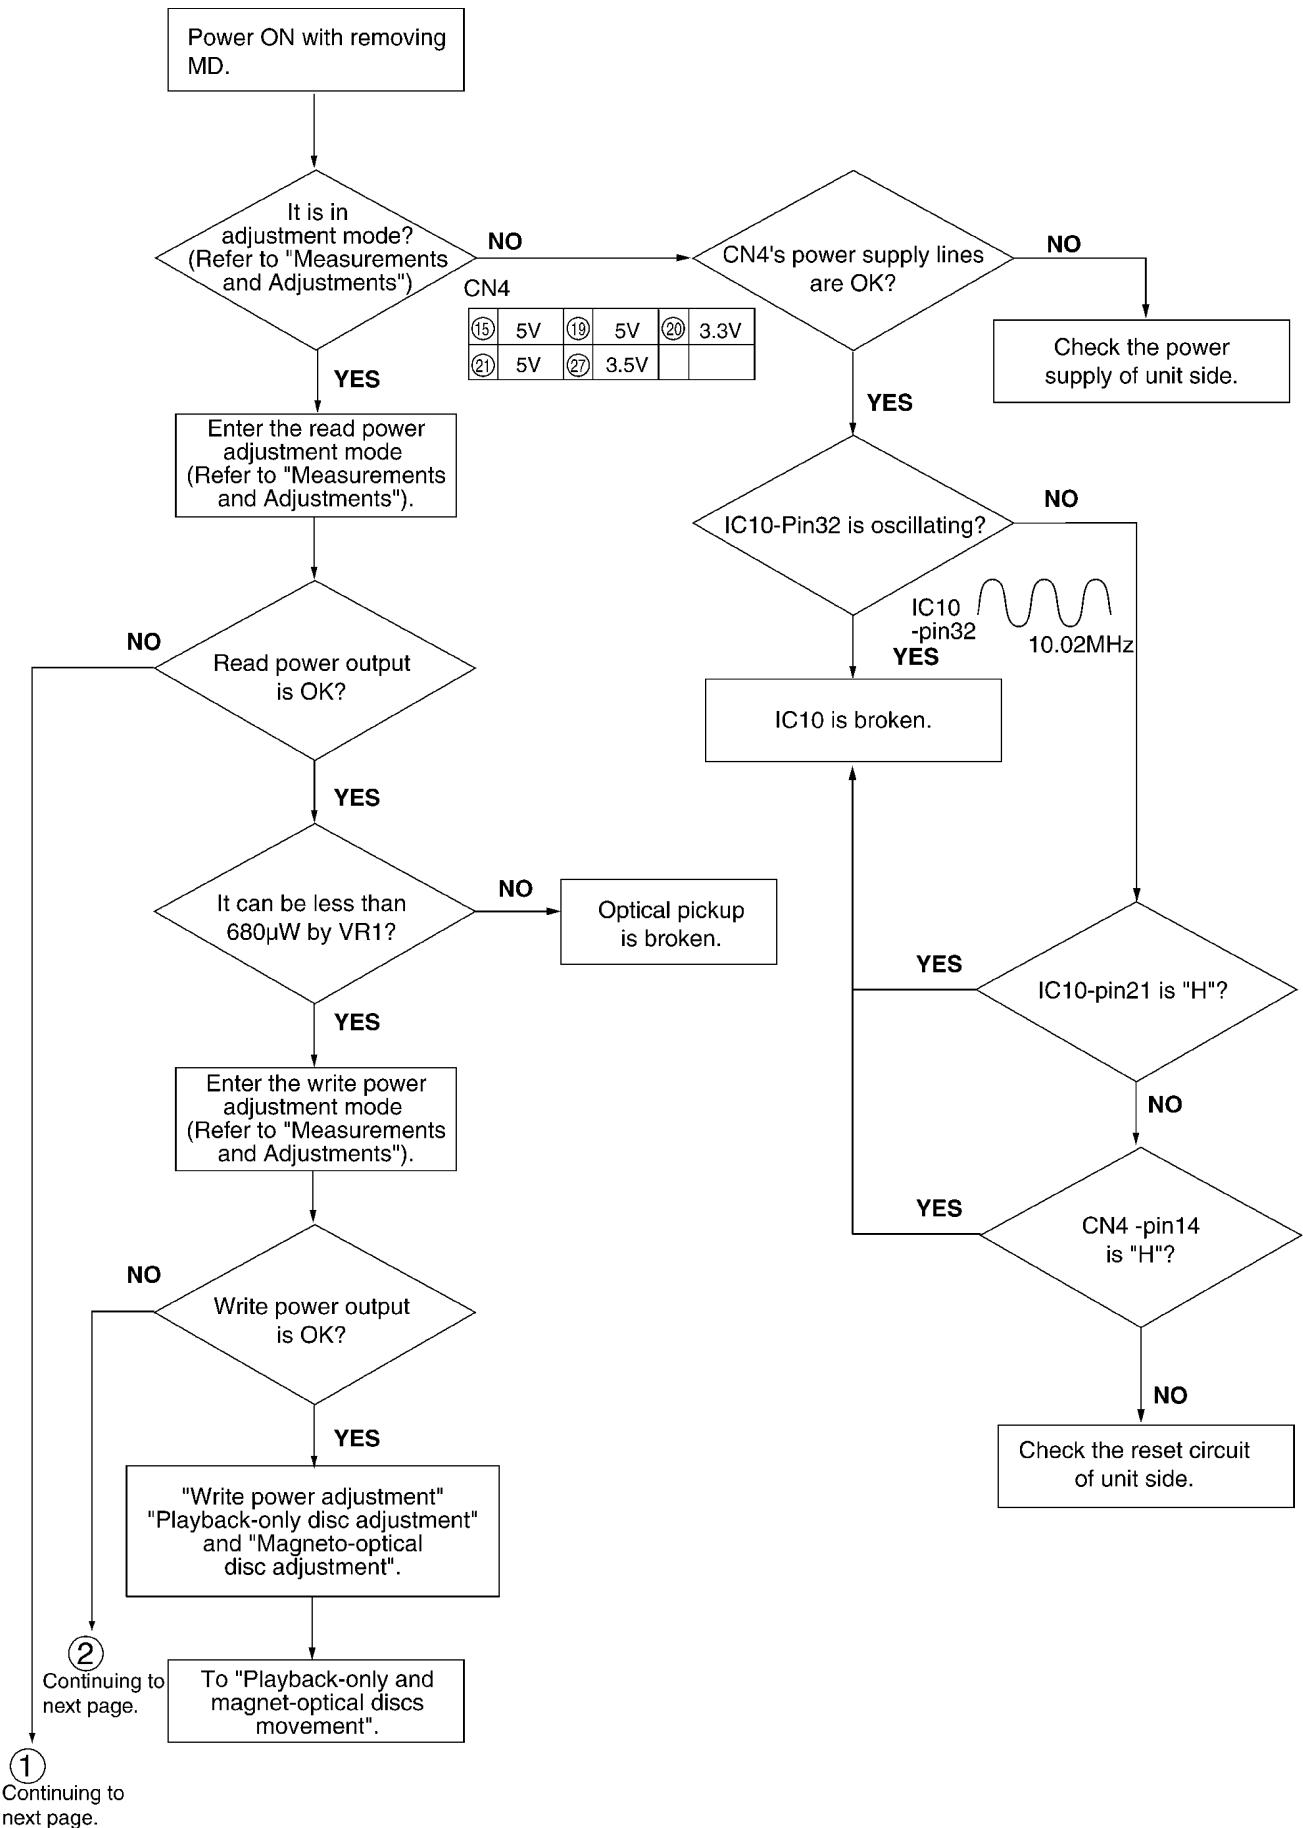

Caution:

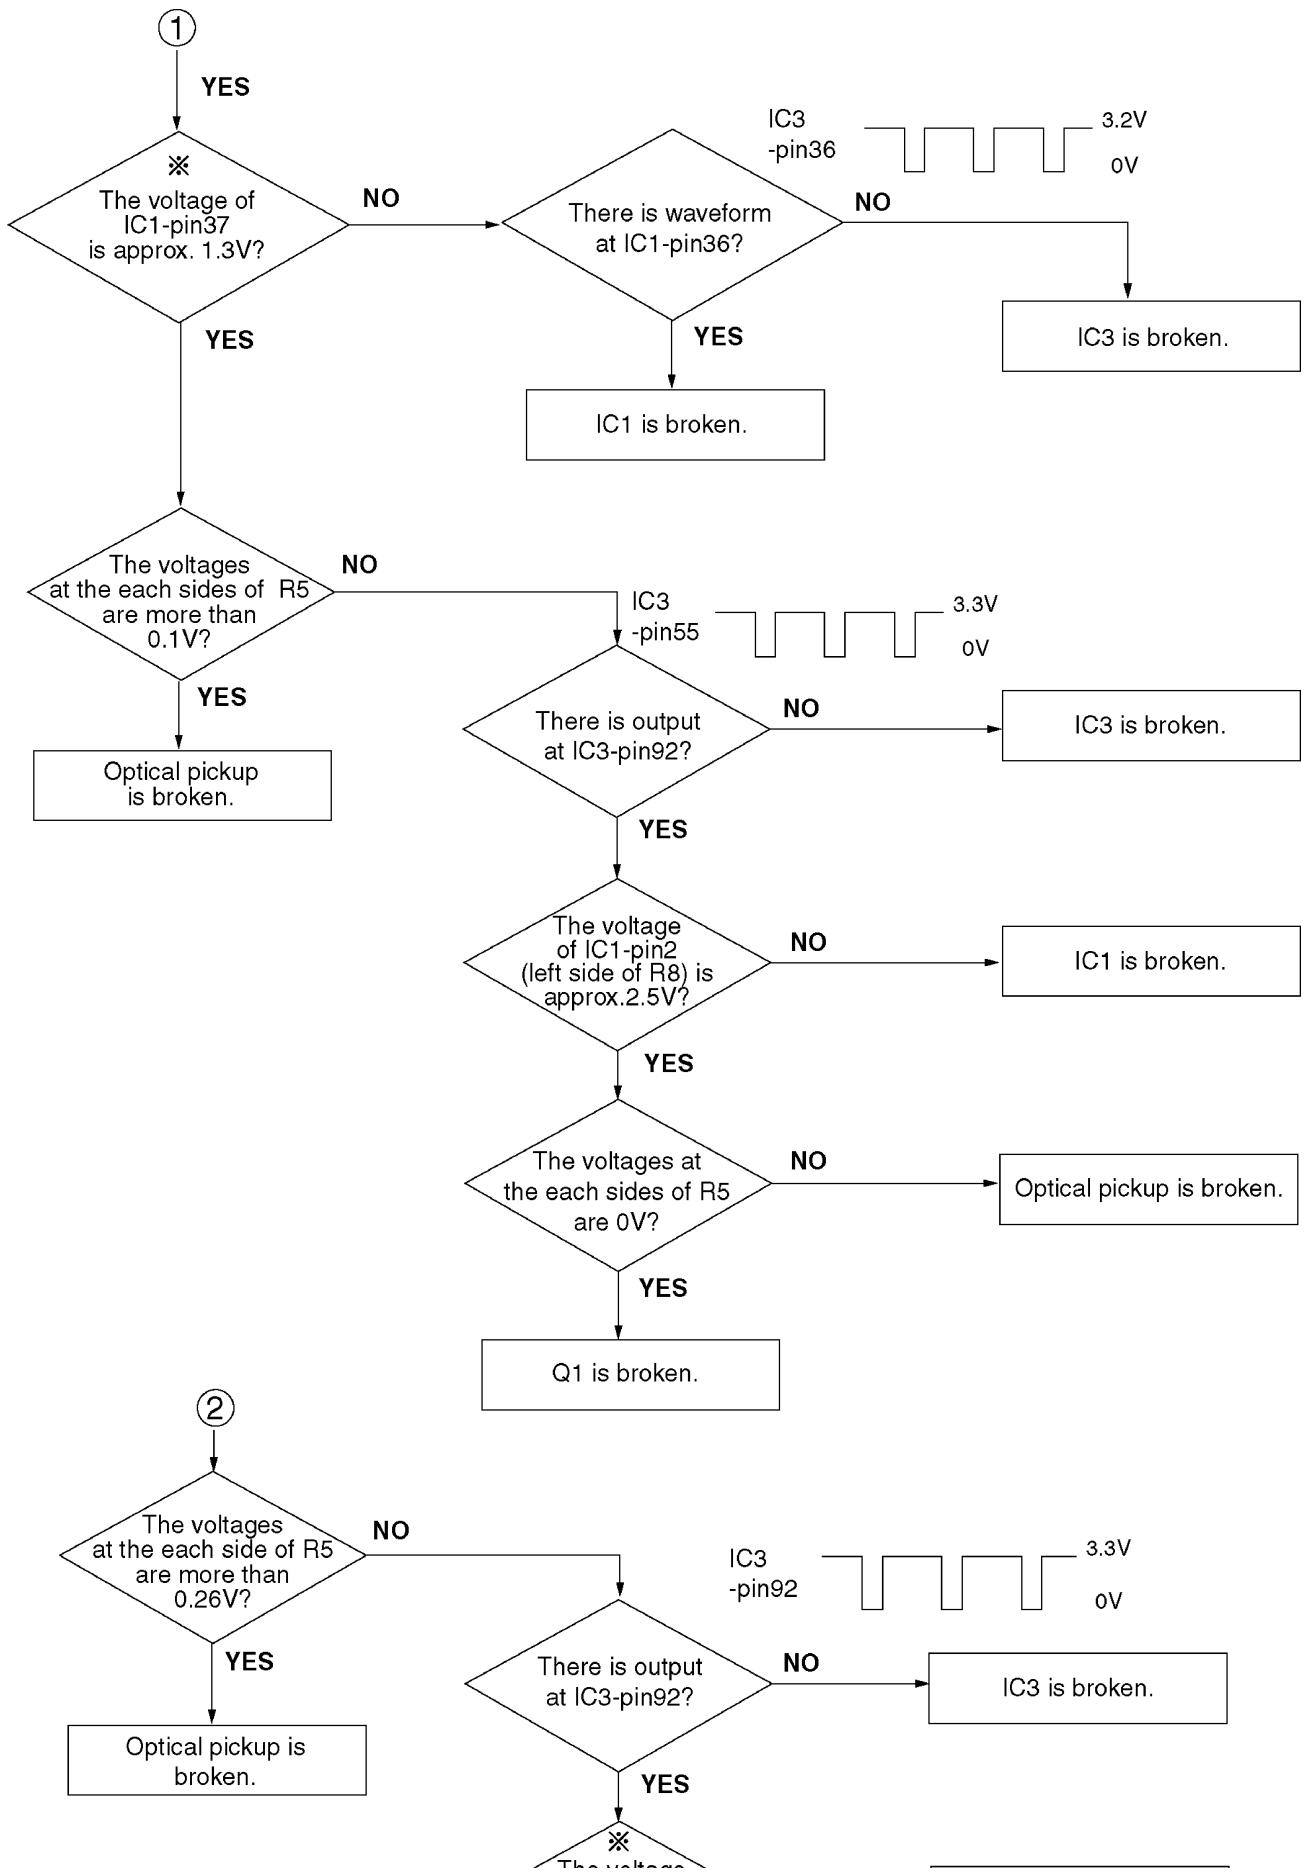

- Proceeding on to the subsequent adjustment procedure with the read power exceeding $680\mu\text{W}$ will result in damage to the optical pickup.
5. Press “2” on the player’s remote control.
“WRITE LASER” will be displayed to indicate the write power adjustment mode.
6. Confirm that the reading of the laser power meter or cartridge type laser power meter is within the specified range. If it is not within the specified range, adjust by turning VR1. (Refer to [Fig.12](#).)
Specified range (write power): $4.8\pm0.1\text{mW}$
- Caution:**
- Do not allow the write power to even momentarily reach or exceed 5.5mW . Doing so will result in damage to the optical pickup.
7. Press “3” on the player’s remote control.
“ROM LASER” will be displayed to indicate the ROM data confirmation mode.
8. Confirm that the reading of the laser power meter or cartridge type laser power meter is within the specified range.
Specified range (ROM data laser power): $540\text{-}660\mu\text{W}$
9. Press “1” on the player’s remote control.
“RAM LASER” will be displayed to indicate the RAM data confirmation.
10. Confirm that the reading of the laser power meter or cartridge type laser meter is within the specified range.
Specified range (RAM data laser power): $540\text{-}660\mu\text{W}$

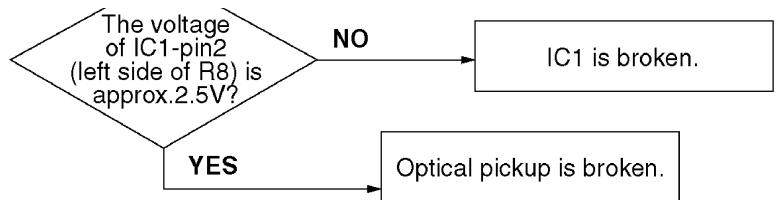

- If the reading in either step 8 or 10 above is not within the specified range, first switch off the power, and then reset the unit to the adjustment mode and repeat the adjustment procedure.

10. Troubleshooting Guide

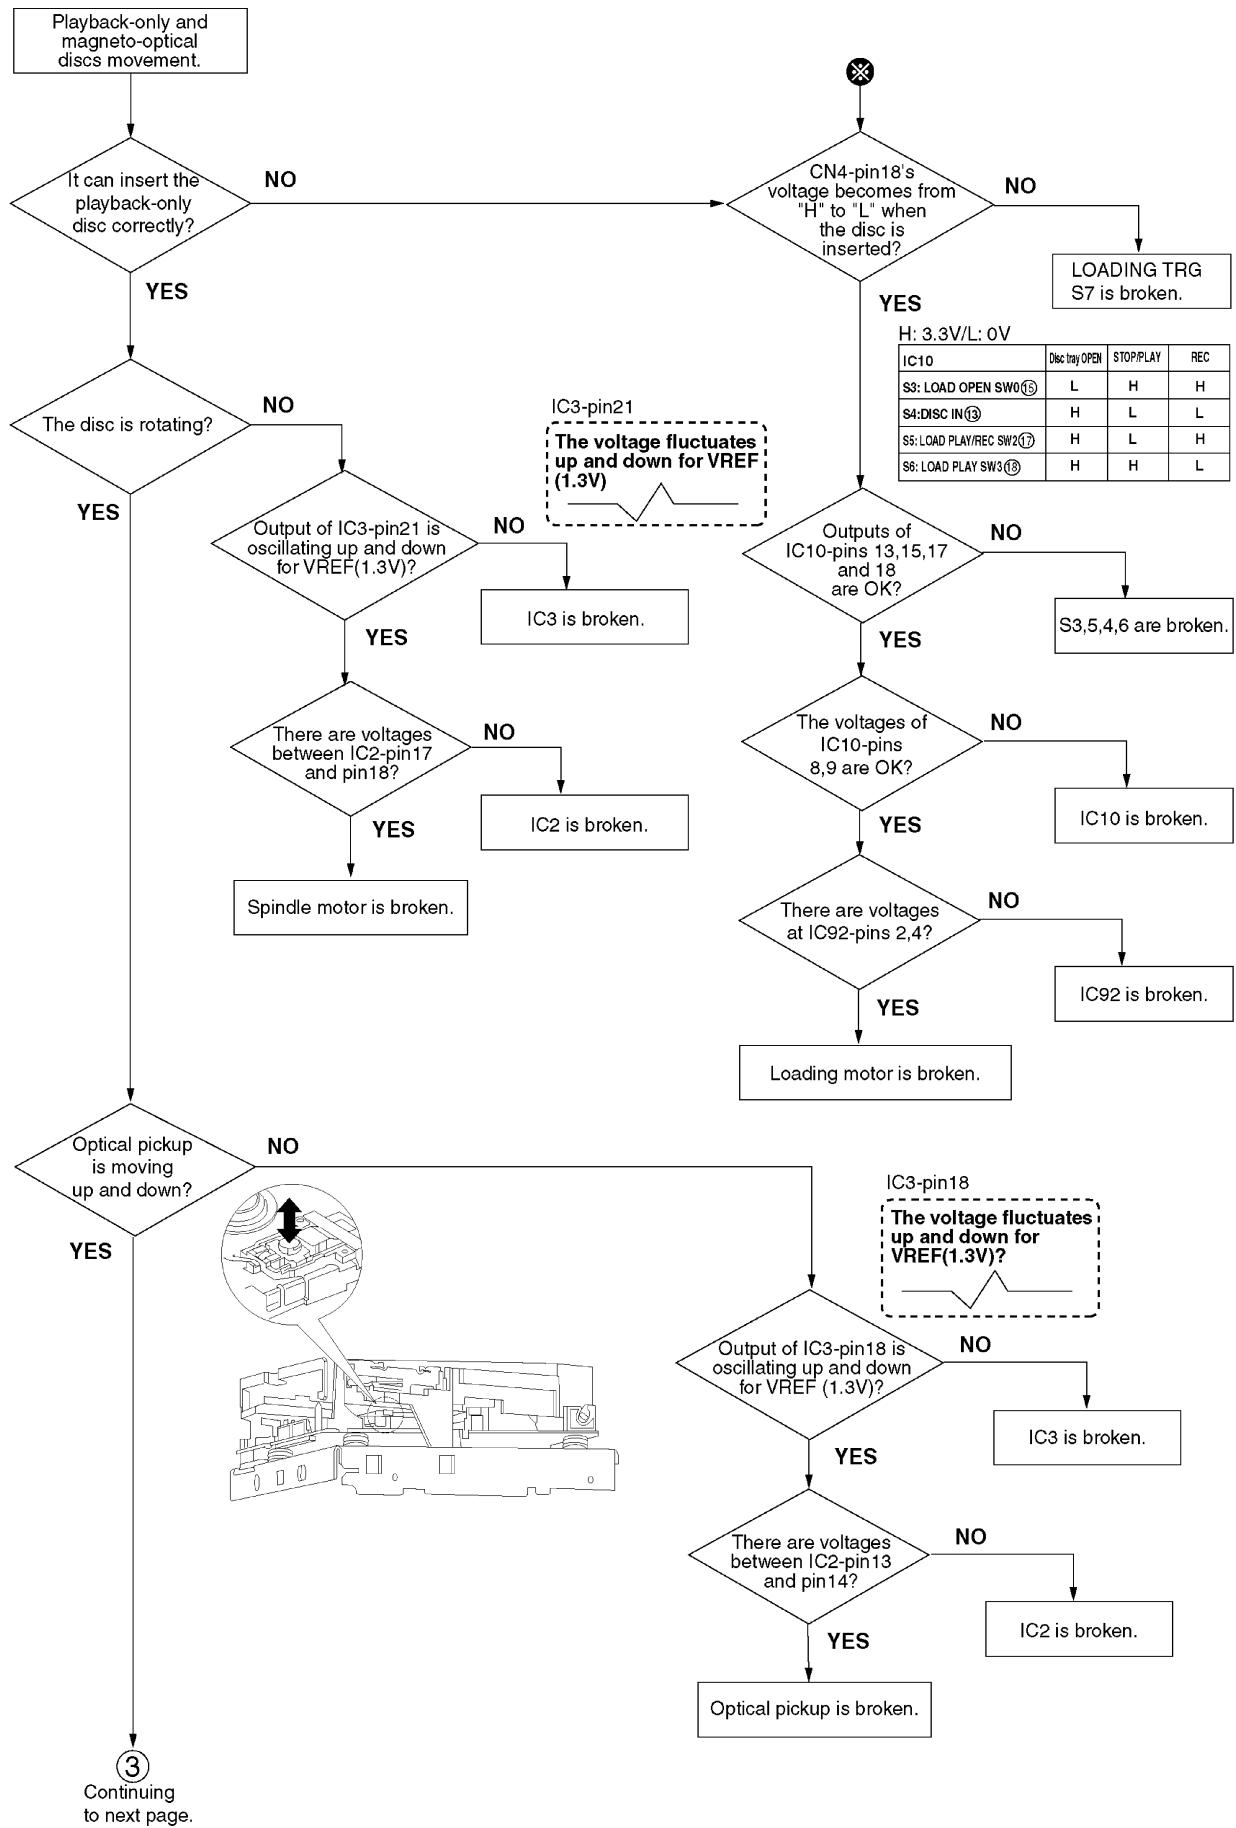

Please refer to this Troubleshooting Guide when you repair for any troubles of this unit.

Important safety notice:

Components identified by  mark have special characteristics important for safety. Furthermore, special parts which have purpose of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used. When replacing any of components, be sure to use only manufacture's specified parts shown in the parts list.

Caution!

IC and LSI are sensitive to static electricity.

Secondary trouble can be prevented by taking care during repair.

Cover the parts boxes made of plastics with aluminum foil.

Ground the soldering iron.

Put a conductive mat on the work table.

Do not touch the legs of IC or LSI with the fingers directly.

16.4. IC10 (MN101D03DAA) : SYSTEM CONTROL

Pin No.	Mark	I/O Division	Function
1	DACRST	O	DAC reset signal output terminal to IC4 ("L":Reset)
2	DEO	O	DE emphasis signal output terminal to IC4("L":DE emphases)
3	MUTE	—	AD-DA mute output terminal (Not used, open)
4	AD RST	O	Reset signal output terminal
5	NRFSTBY	O	Standby control signal output terminal ("L":Standby)
6	PC	O	Transistor drive signal output terminal ("H":Power ON)
7	MSP RST	O	MSP reset signal output terminal ("L":Reset)
8	LOAD1	O	Loading motor drive 1 output terminal
9	LOAD0	O	Loading motor drive 0 output terminal
10	NEFMON	O	Magnetic head current output terminal
11	TEST01	O	Test signal output terminal (Not used, open)
12	TVSW	I	Traverse innermost detection switch signal input terminal
13	DISC IN	I	Disc detection switch signal input terminal
14	REFLECT	I	Reflection rate switch signal input terminal
15	LOAD SW0 (OPEN)	I	Loading mechanism position det. Switch 0 signal input terminal
16	LOAD SW1 (TRG)	I	Loading mechanism position det. Switch 1 signal input terminal
17	LOAD SW2 (PLAY/REC)	I	Loading mechanism position det. Switch 2 signal input terminal.
18	LOAD SW3 (PLAY)	I	Loading mechanism position det. Switch 3 signal input terminal

17. Replacement Parts List

Notes:

*Important safety notice:

Components identified by  mark have special characteristics important for safety. Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

*Warning: This product uses a laser diode. Refer to caution statements.

*ACHTUNG: Die Lasereinheit nicht zerlegen. Die Lasereinheit darf nur gegen eine vom Hersteller spezifizierte Einheit ausgetauscht werden.

*Capacity values are in microfarads (uF) unless specified otherwise, P=Pico-farads (pF) F=Farads (F)

*Resistance values are in ohms, unless specified otherwise, 1K=1,000 (OHM), 1M=1,000K (OHM)

*[MAVD] indicates in Remarks columns parts that are supplied by MAVD.

*The marking <RTL> indicates that the Retention Time is limited for this item. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

*“<IA>”, “<IB>”, “<IC>”, marks in Remarks indicate languages of instruction manuals. [<IA> : English, <IB> : German / Italian / French, <IC> : Netherlands / Danish / Spanish / Swedish / Polish]

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5-ampere and that it is approved by ASTA or BSI to BS1362.

Check for the ASTA mark  or the BSI mark  on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local dealer.

CAUTION!

IF THE FITTED MOULDED PLUG IS UNSUITABLE FOR THE SOCKET OUTLET IN YOUR HOME THEN THE FUSE SHOULD BE REMOVED AND THE PLUG CUT OFF AND DISPOSED OF SAFELY.

THERE IS A DANGER OF SEVERE ELECTRICAL SHOCK IF THE CUT OFF PLUG IS INSERTED INTO ANY 13-AMPERE SOCKET.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt please consult a qualified electrician.

IMPORTANT

The wires in this mains lead are coloured in accordance with the following code:

Blue: Neutral, Brown: Live.

As these colours may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured Blue must be connected to the terminal which is marked with the letter N or coloured Black or Blue.

The wire which is coloured Brown must be connected to the terminal which is marked with the letter L or coloured Brown or Red.

WARNING: DO NOT CONNECT EITHER WIRE TO THE EARTH TERMINAL WHICH IS MARKED WITH THE LETTER E, BY THE EARTH SYMBOL  OR COLOURED GREEN OR GREEN/YELLOW.

THIS PLUG IS NOT WATERPROOF KEEP DRY.

Before use

Remove the connector cover.
