4 Power Source ON/OFF and Signal Check

To operate these units ST-HD510/310 normally, they are necessary for connecting to the units SE-HD510/310.

When operating the unit ST-HD510/310, be sure to connect the units SE-HD510/310 by connection cables.

1. Short the section between TP302 (A.GND) and TP304(D.GND), and as well as the section between TP303(CT) and TP304(D.GND).(As shown in Fig. 1.)
2. Connect with the Amplifier (SE-HD510/310).(As shown in Fig. 1.)

3. Connect the AC mains lead to Amplifier (SE-HD510/310).(As shown in Fig. 1.)
4. Connect the speakers to speaker input terminal.(As shown in Fig. 1.)
5. Turn on the power of the Amplifier (SE-HD510/310).
6. Press INPUT SELECTOR to select the external source (EXT/MD) of the Amplifier (SE-HD510/310).
7. Input a sound signal to external input terminal of Tuner (ST-HD510/310), and confirm to be outputted from the speaker.

5 Operation Checks and Component Replacement Procedures

- This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
- For reassembly after operation checks or replacement, reverse the respective procedures. Special reassembly procedures are described only when required.

5.1. Checking for the tuner P.C.B. and FL P.C.B.

- Check the tuner P.C.B. and FL P.C.B. as shown below.

5.2. Checking for the main P.C.B.

- Follow the (Step 1) - (Step 3) of item 5.1.

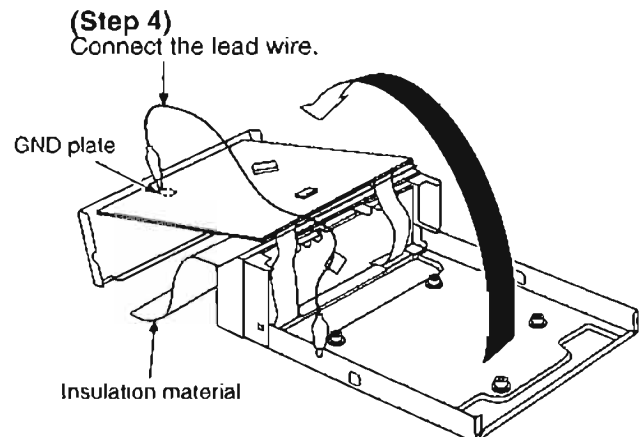

NOTE:
When installing the main P.C.B., make sure that the holes of main P.C.B. are aligned with the ribs of bottom cabinet.

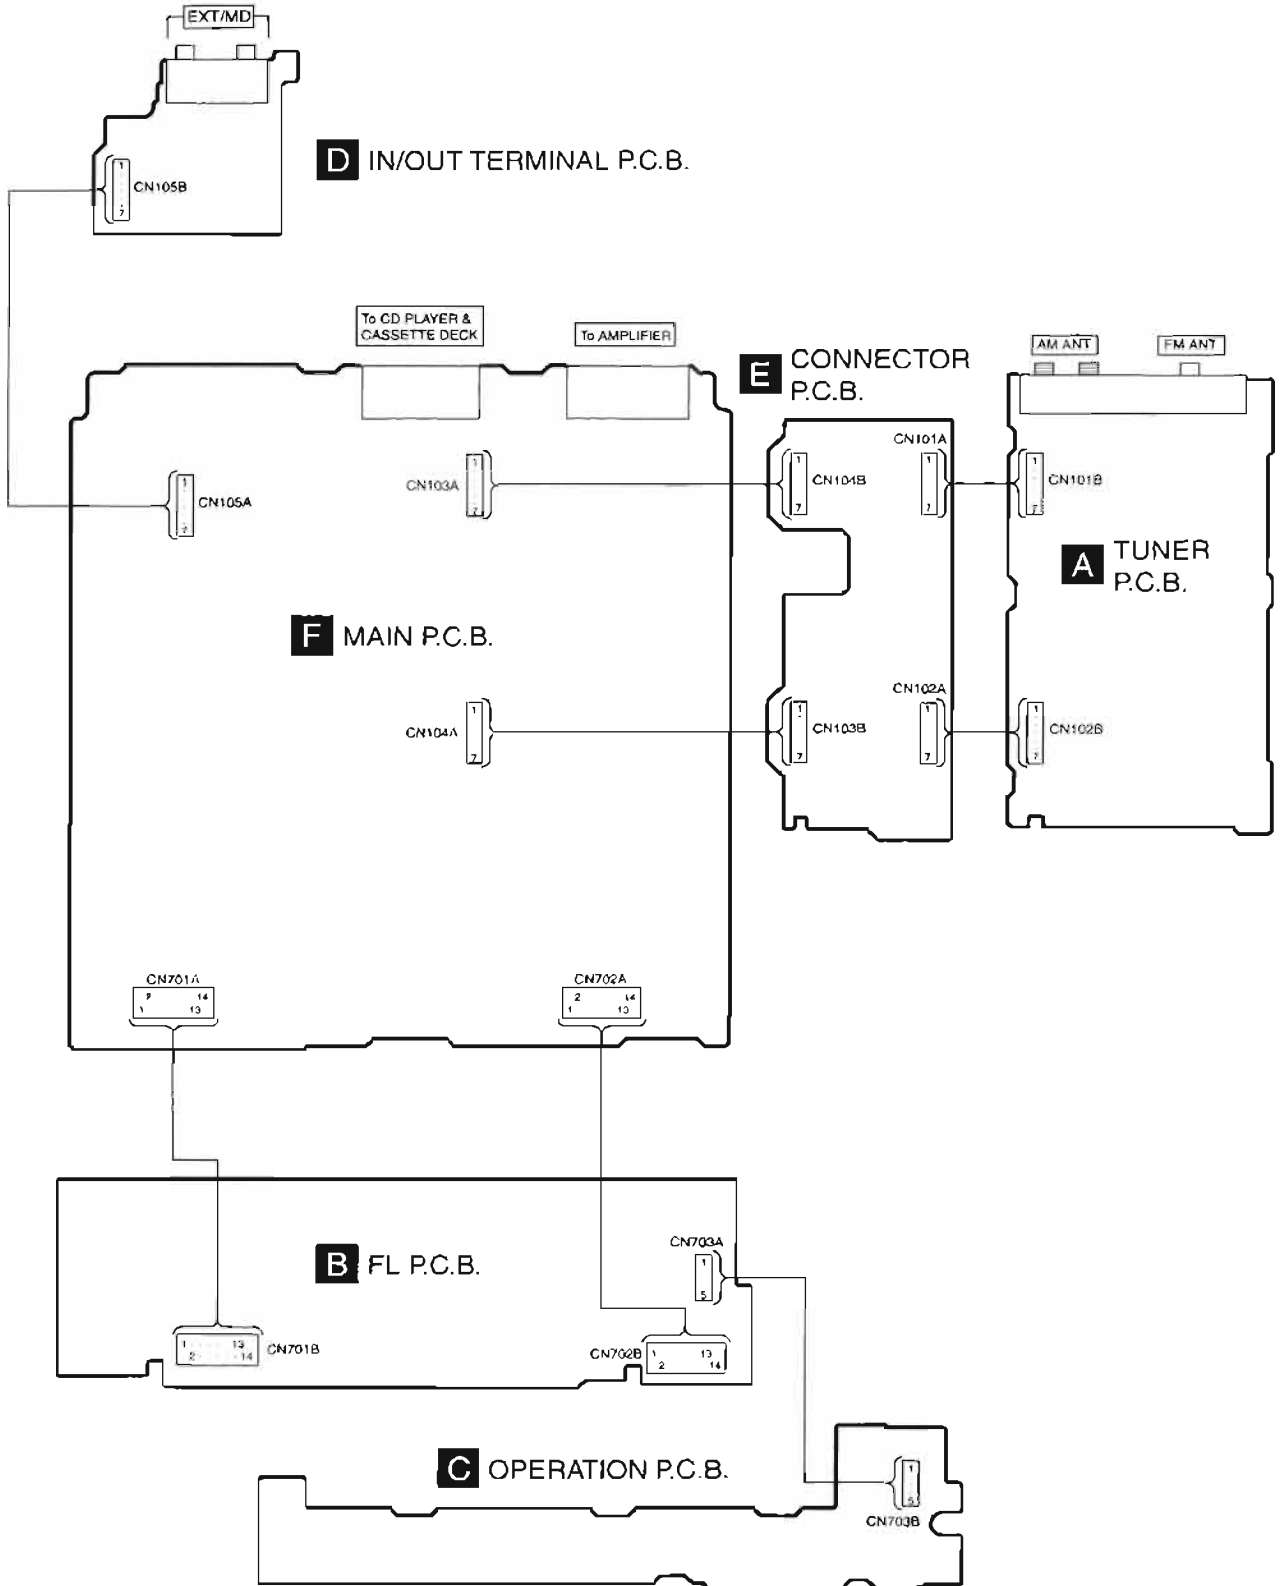

(Step 3) Release the 2 claws, and then remove the main P.C.B. and rear panel.

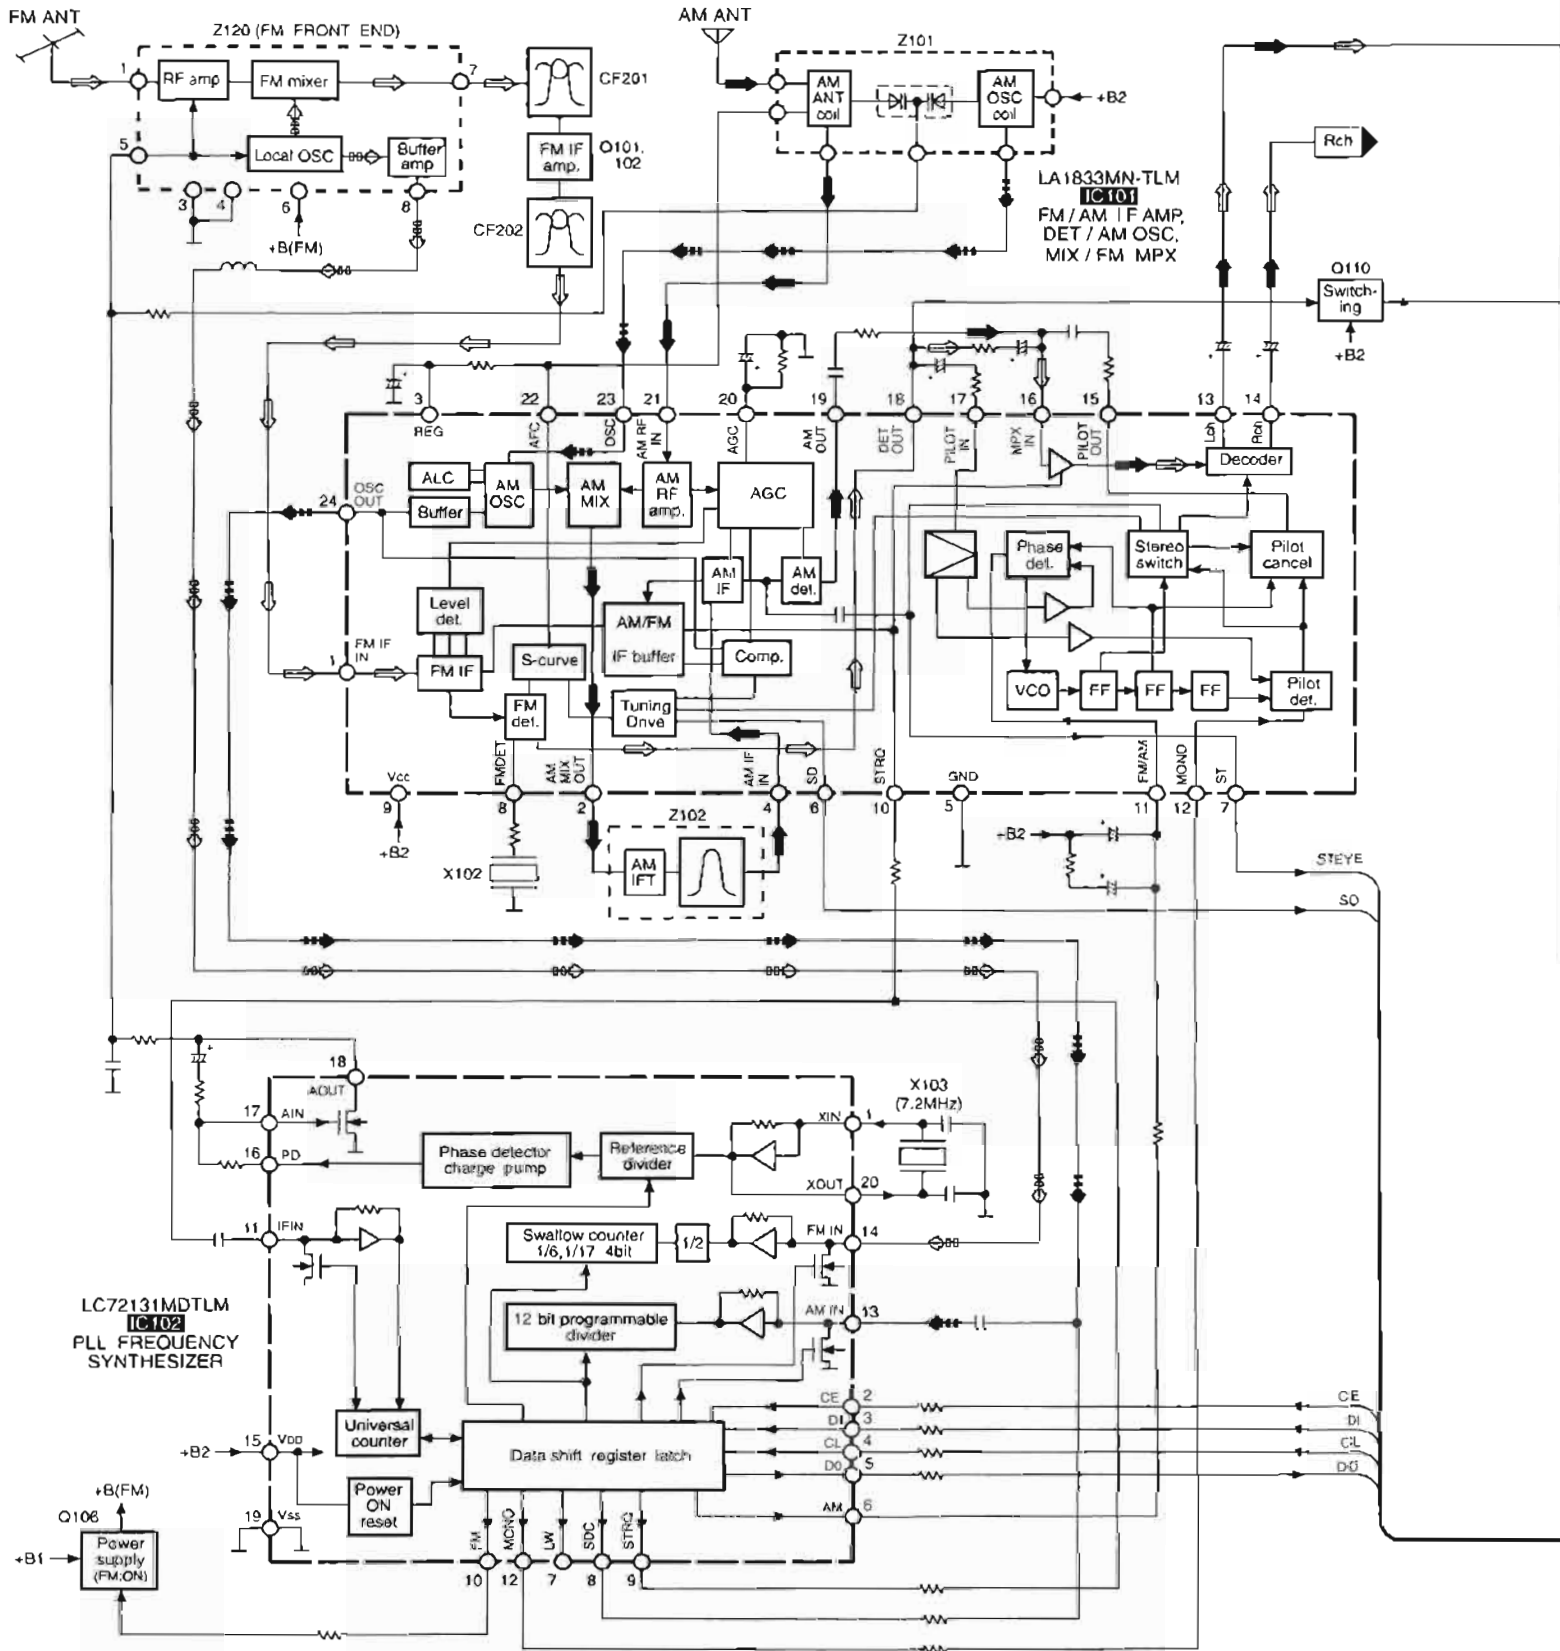

- Check the main P.C.B. as shown below.

Important safety notice:

Components identified by \triangle mark have special characteristics important for safety.

Furthermore, special parts which have purpose of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used. When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

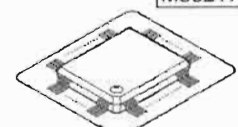

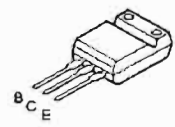

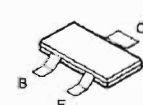

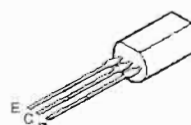

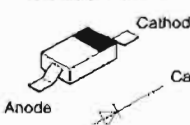

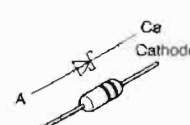

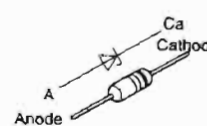

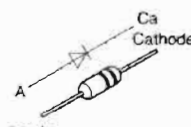

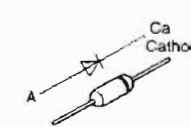

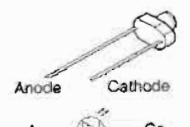

Caution!

- IC and LSI are sensitive to static electricity.
- Secondary trouble can be prevented by taking care during repair.
- Cover the parts boxes made of plastics with aluminum foil.
- Ground the soldering iron.
- Put a conductive mat on the work table.
- Do not touch the legs of IC or LSI with the fingers directly.

Note:

*Important safety notice:

Components identified by Δ mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

*The markings <RTL> indicate that the Retention Time is limited for these items. After the discontinuation of these assemblies in production, the items will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

*Capacity values are in microfarads (μ F) unless specified otherwise, P=Pico-farads (pF) F=Farads (F)

*Resistance values are in ohms, unless specified otherwise, 1K=1,000 (OHM), 1M=1,000k (OHM)
