ORDER NO. SD7704-1216

Service Manual

Stereo Integrated Amplifier

SU-7300

(M), (MC)

Simulated wood cabinet

- The model SU-7300 (M) is available in America only.
- The model SU-7300 (MC) is available in Canada only.

TECHNICAL SPECIFICATIONS (Specifications are subject to change without notice for further improvement.)

AMPLIFIER SECTION

Rated minimum sine wave RMS power output
20 Hz ~ 20 kHz
both channels driven
0.08% total harmonic distortion
48W per channel (4 ohms)
41W per channel (8 ohms)

1 kHz continuous power output
both channels driven
0.08% total harmonic distortion 55W per channel (4 ohms)
43W per channel (8 ohms)

Total harmonic distortion
0.08% at rated power (20 Hz ~ 20 kHz)
0.04% at half power (20 Hz ~ 20 kHz)
0.02% at half power (1 kHz)

Intermodulation distortion	0.08%
Damping factor	20 (4 ohms), 40 (8 ohms)
Input sensitivity and impedance	
PHONO	2.5mV/47 kilohms
TUNER	150mV/47 kilohms
TAPE 1, 2 (PLAYBACK)	150mV/47 kilohms
PHONO maximum input voltage (1 kHz, RMS)	150mV
S/N (IHF, A)	
PHONO	78 dB
TUNER	97 dB
Residual hum and noise	0.6mV
Frequency response	
PHONO	RIAA standard curve ±0.3 dB
TUNER	7 Hz ~ 80 kHz, −3 dB
	20 Hz ~ 20 kHz, ±0.5 dB
Tone controls	
BASS	50 Hz, +12 dB ~ −12 dB
TREBLE	20 kHz, +12 dB ~ −12 dB
High filter	8 kHz, −6 dB/oct.
Loudness control (volume at −30 dB)	100 Hz, +8 dB
Output voltage	
TAPE 1, 2 (REC OUT)	150mV
Load impedance	
MAIN or REMOTE	4 ~ 16 ohms

GENERAL

Power consumption	140W (only for America)
	260VA (only for Canada)
Power supply	AC 120V 60 Hz
Dimensions (W x H x D)	17 5/16" × 5 3/4" × 13 5/32"
	(441 x 146 x 334) mm
Weight	20.1 lb. (9.1 kg)

Weights and dimensions shown are approximate.

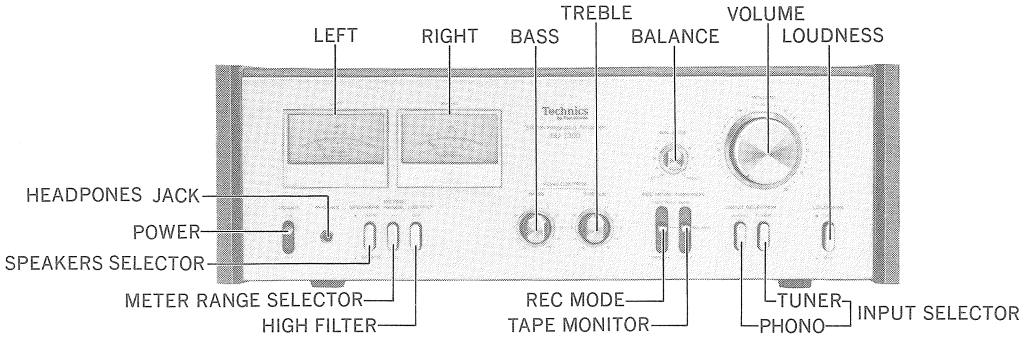
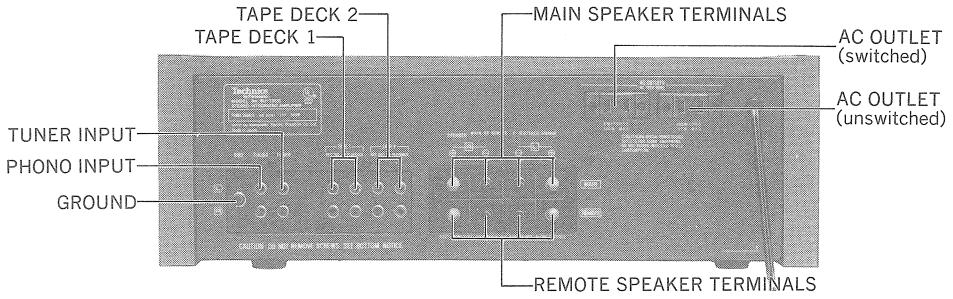
■ LOCATION OF CONTROLS

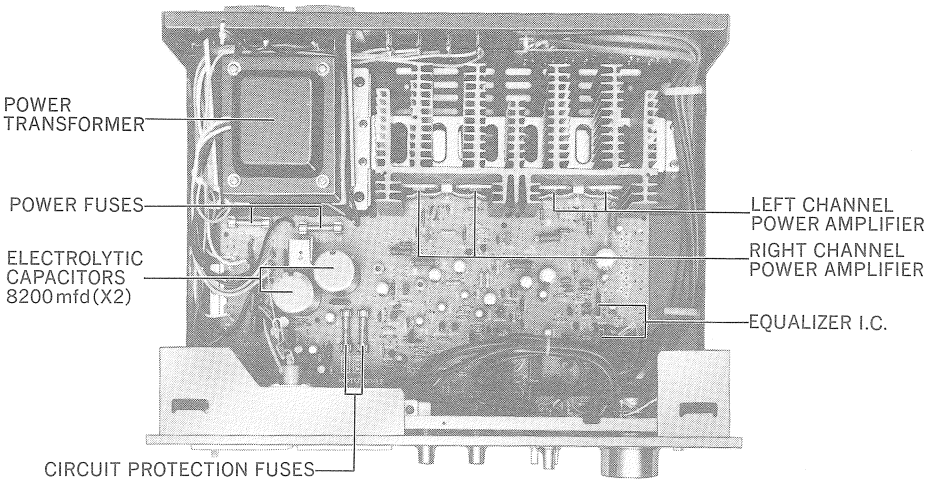


Front Panel View



Rear Panel View

NOTE:
The unit is provided with the speaker circuit protection fuses at the right and left channels respectively.
The fuse is to prevent the power transistor from destruction, should the speaker terminals be short-circuited.
Accordingly, if the unit fails to function upon completion of the speaker connections, check the speaker protection fuses first of all for possible blowing.



Chassis View

■ TO REMOVE CABINET

1. Remove four (4) cabinet-mounting screws, nos. ① ~ ④, as shown in fig. 1.
2. Remove cabinet from chassis.
3. To reassenble, reverse above procedure.

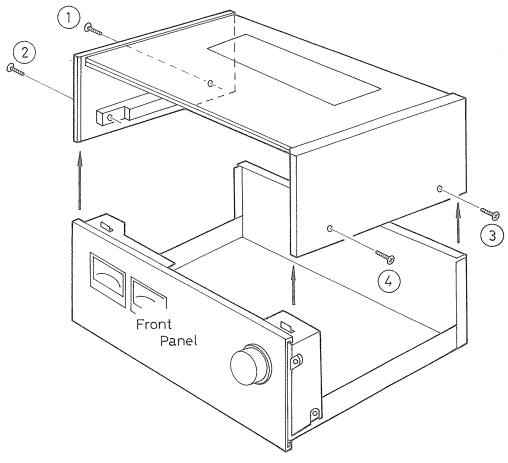


Fig. 1

■TO REMOVE CHASSIS

1. Remove cabinet from chassis. (Refer to "To remove cabinet")
2. Remove four (4) panel bracket-mounting screws, nos. ① ~ ④, as shown in fig. 2.
3. Remove panel bracket from chassis. (right and left side)
4. Remove four (4) panel-mounting screws, nos, ⑤ ~ ⑧, as shown in fig. 2.
5. Remove lead wire from lead clamp, as shown in fig. 3.

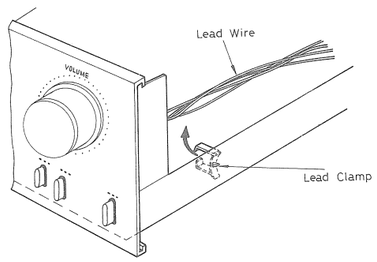

Fig. 3

6. Remove a metal clamp-mounting screw, no. ⑨, as shown in fig. 4.
7. Remove metal clamp of printed circuit board.
8. Remove four (4) heatsink- mounting screws, nos. ⑩ ~ ⑬, as shown in fig. 4.

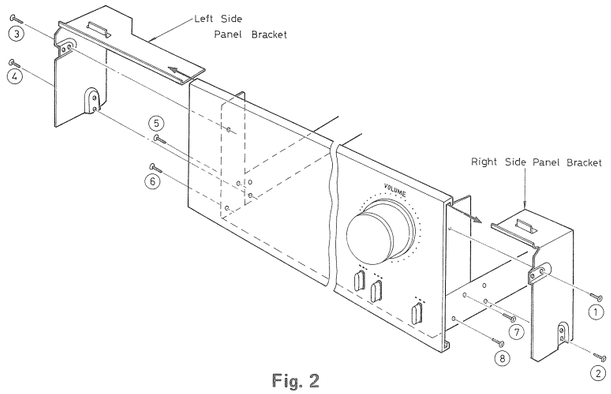

Fig. 2

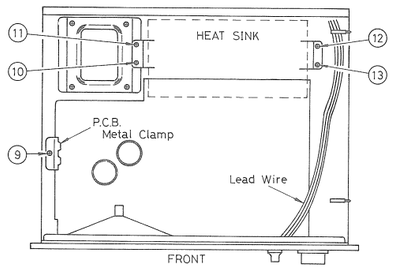

Fig. 4

9. As shown in fig. 5, hold the panel at its side ends abd push it downward tilting slightly its top part to the frontward direction.
10. Remove the front panel from the chassis, as shown in fig. 6 to fig. 7.
11. Set the printed circuit board on the chassis as indicated in fig. 8.
12. The front panel can be reset in the reverse sequence.
13. Mount the lever switch bracket inside the chassis prior to resetting the front panel, as shown in fig. 8.

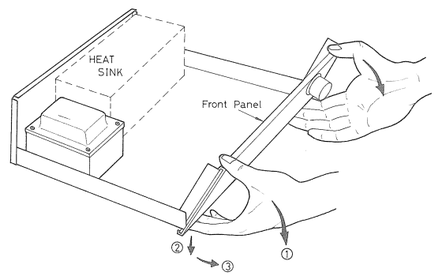

Fig. 5

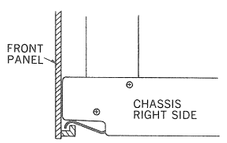

Fig. 6

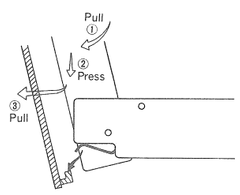

Fig. 7

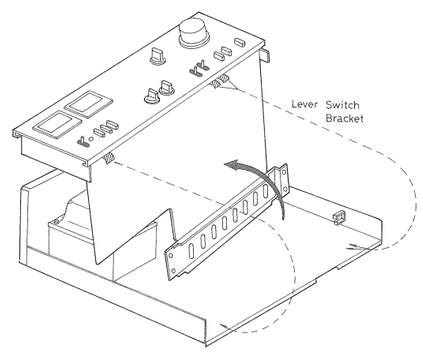

Fig. 8

■ ALIGNMENT INSTRUCTIONS

- When the power transistor is replaced, be sure to apply silicone compound (or equivalent thermal diffusion agent) onto the mica plate, and at the same time confirm the idling current of the power transistor. (measure voltage across the emitter resistance)

Ⓐ For adjustment with DC voltmeter

1. Turn the speaker switch "OFF".
2. Connect the DC voltmeter as in fig. 9 of the adjusting spot diagram.
3. If the reading is under 25mV approximately several minutes after turning ON the power supply, the circuit is "OK". On the other hand, if the reading is over 25mV, cut off the lead wire for **L** in the case of left channel (The lead wire for **R** in the case of right channel).
4. Should the reading not fall under 25mV even when the lead wire has been cut off, there is something wrong with the circuit, and therefore, check the power source circuit or main amplifier circuit.

Ⓑ Current should be checked only when adjustment is made with a tester. (measuring instrument incapable of measuring voltage in mV unit).

1. Turn OFF the power supply for the set.
2. Connect the ammeter as shown in fig.11 .
3. After ensuring that the ammeter will not come off, turn ON the power supply.
4. If the reading is under 75mA after several minutes (But, when nothing resistance of internal resistor by ammeter) the circuit is "OK". If over 75mA, cut off the lead wire for **L** in the case of left channel (The lead wire for **R** in the case of right channel).
5. If the reading does not fall under 75mA, there is something wrong with the circuit.

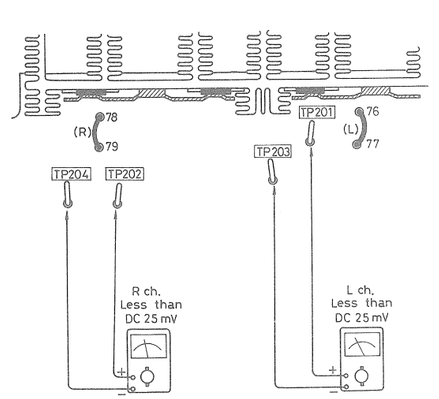

Fig. 9

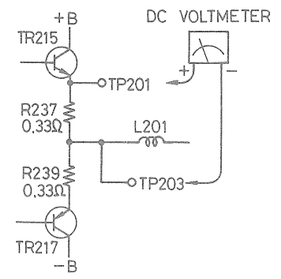
Notes:

1. When cutting off the lead wire, cut off the same at root.
2. The adjustment may be made either by Ⓐ or by Ⓑ method. (We recommend the method Ⓐ where possible).
3. Fig. 10 and 11 are related to the case of left channel.



Voltage check method

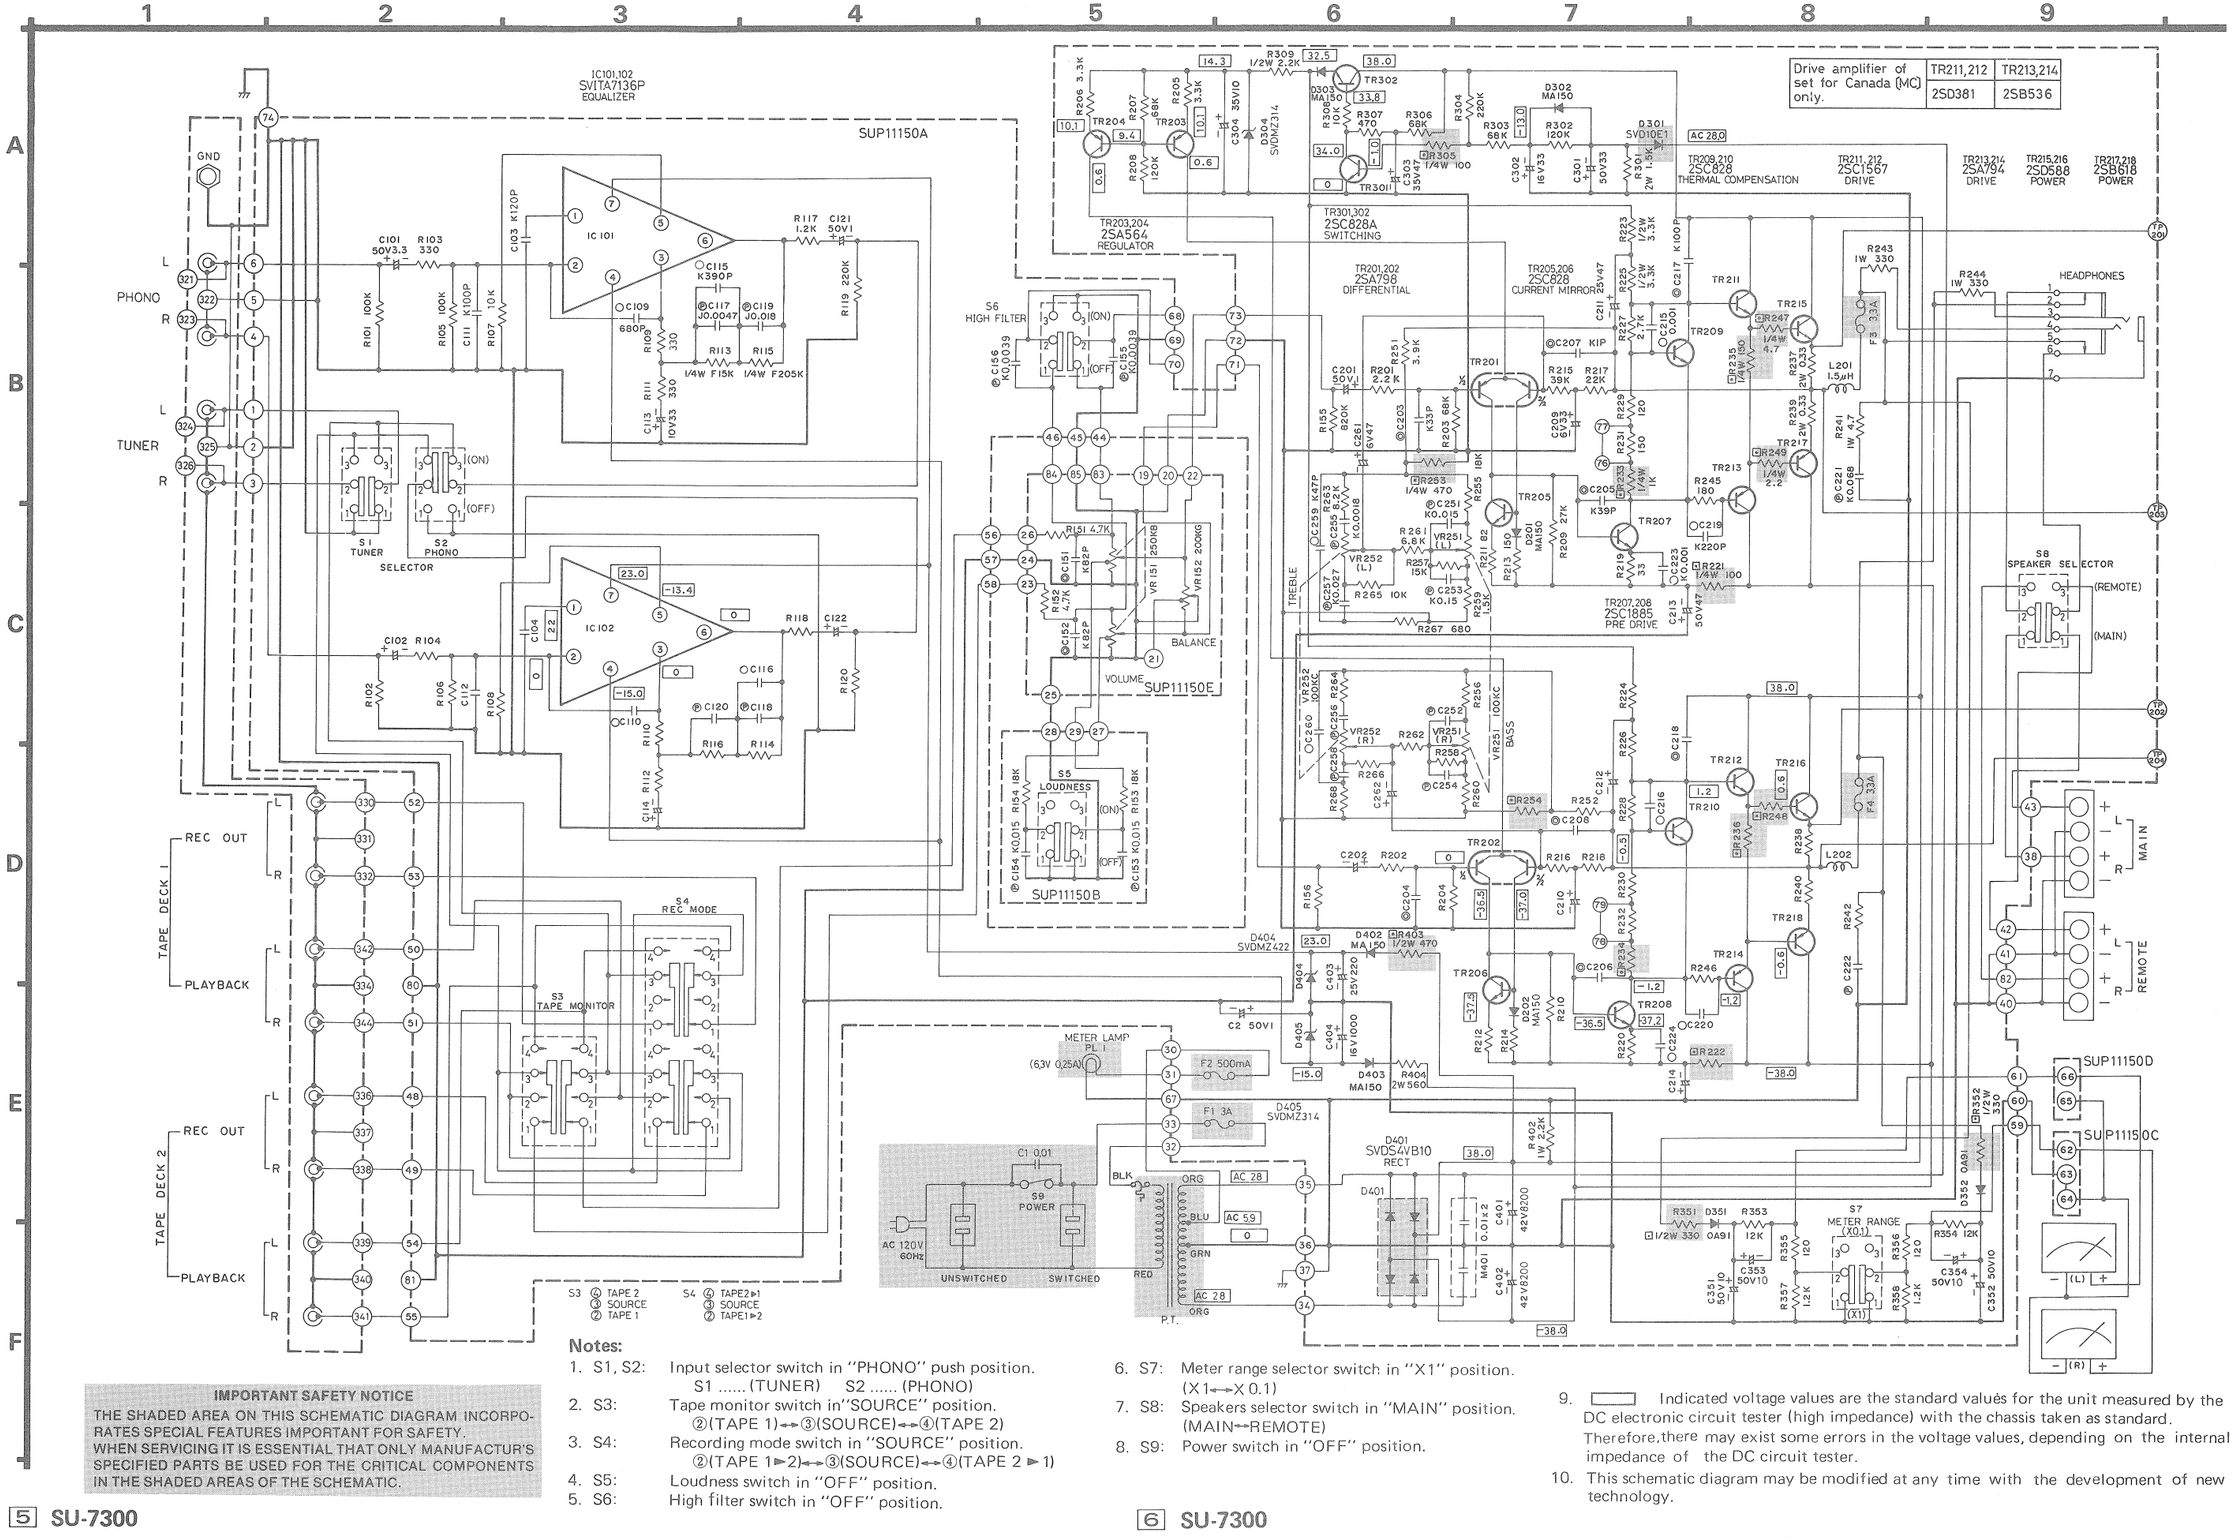
Schematic Diagram ..... Model SU-7300



IMPORTANT SAFETY NOTICE

THE SHADED AREA ON THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR SAFETY. WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTUR'S SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SHADED AREAS OF THE SCHEMATIC.

Notes:

1. S1, S2: Input selector switch in "PHONO" push position. S1 ..... (TUNER) S2 ..... (PHONO)
2. S3: Tape monitor switch in "SOURCE" position. ②(TAPE 1)↔③(SOURCE)↔④(TAPE 2)
3. S4: Recording mode switch in "SOURCE" position. ②(TAPE 1►2)↔③(SOURCE)↔④(TAPE 2►1)
4. S5: Loudness switch in "OFF" position.
5. S6: High filter switch in "OFF" position.
6. S7: Meter range selector switch in "X1" position. (X1↔X 0.1)
7. S8: Speakers selector switch in "MAIN" position. (MAIN↔REMOTE)
8. S9: Power switch in "OFF" position.
9. ▭ Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
10. This schematic diagram may be modified at any time with the development of new technology.

■ SERVICE AID

Shock noise prevention circuit during ON-OFF of power supply

In the voltage at the point Ⓐ, at the moment when the power supply is turned ON, C302 is charged by the current rectified to negative through D301. Therefore, gradual change to minus takes place from 0V. During this time, positive voltage is applied to the base of TR301 which is thus rendered conductive. Consequently, the base of TR302 connected to TR301 is of ground potential, with TR302 not being functioning. In other words, no current is Howing through the preamplifier in this state. After the power supply is turned ON, the potential at the point Ⓑ gradually decreases as the point Ⓐ is saturated to negative through time constant of R302 and C302, and when TR301 reaches cut- off state, positive voltage goes on charging C303. Upon rising of the base potential of TR302 close to 0.7V, TR302 is turned ON, thus causing current to flow through the preamplifier. Time required from turning ON of the power supply to functioning of the preamplifier is set to be approximately 6 to 7 seconds. When the power supply is turned OFF, D302 is biased in the forward direction, and if R301≪R302, the charges in C301 and C302 are discharged through R301 in a short period of time. However, large positive voltage of specific constant does not fall immediately, with voltage at the point Ⓑ rising up to TR301 operating voltage for causing TR301 to function. Accordingly, the charge in C303 is discharged, and TR302 rapidly reaches cut-off state, with current being prevented from flowing through the preamplifier, so that the shock noises from the preamplifier section during turning OFF of the power supply can be eliminated.

■ REPLACEMENT PARTS LIST

Important Safety Notice

Components identified by shaded area have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.

NOTE: 1. Part numbers are indicated on most mechanical parts.
Please use this part number for parts orders.
