(For United Kingdom only)

BE SURE TO READ THE CAUTION FOR THE AC MAINS LEAD ON PAGE 3 BEFORE CONNECTION.

The battery takes 12 hours to fully charge.

Before connection to other components, follow steps 1 to 4 so that the battery starts charging immediately.

Ensure [MAIN POWER] is off when installing or removing the battery.

- 1 Insert the plug of the battery into the jack inside the battery compartment.**

To disconnect the plug

Lift the lever and pull.

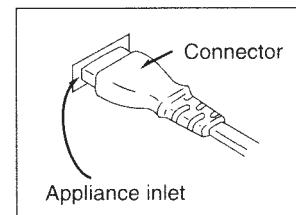

- 2 Put the battery into the compartment and attach the case with the two screws.**

- 3 Connect the AC power cord.**

Insertion of Connector

Even when the connector is perfectly inserted, depending on the type of inlet used, the front part of the connector may jut out as shown in the drawing.

However there is no problem using the unit.

- 4 Turn the MAIN POWER on.**

- ① Press [PUSH OPEN] to open the cover panel.
- ② Press [MAIN POWER] button to select **— ON**.
(**— → —**)

MAIN POWER indicator lights up.

Charging of the battery starts.

The CHARGE indicator lights while the battery is charging and goes out when fully charged.

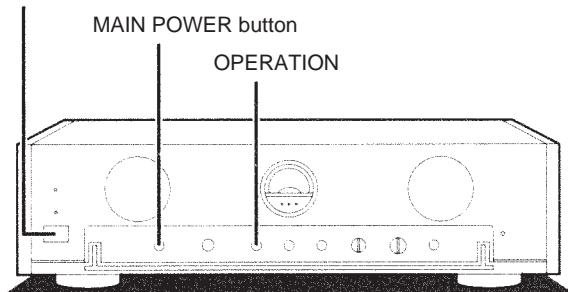

Now carry out the connections and operations on the following pages, leaving MAIN POWER ON to charge the battery.

Note

For your safety, POWER should be left standby until all other connections are complete.

Battery power and this unit's power system

POWER button

Recently, audio makers have been looking at the polarity of the power cords used with systems in an effort to reduce noise caused by power sources as much as possible. Batteries are independent from AC power sources and so noise caused by power transfer is cut, making them the ideal source for audio equipment.

This unit uses a 2×12 V 2.2 Ah sealed lead-acid battery for better sound quality.

Features

The battery is charging whenever MAIN POWER is on and DC is not selected as the power source. This means recharging takes no extra trouble.

Normal on/standby operation is done with the POWER button, and switching between AC and DC operation is done with OPERATION.

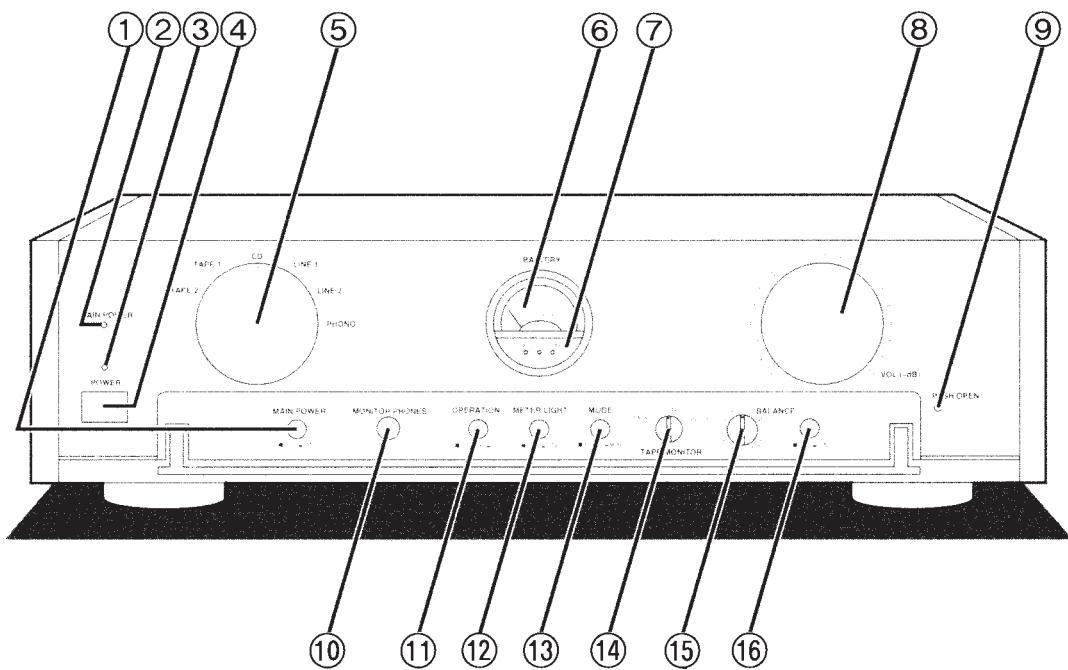

Note

Observe the following points for your safety and to keep the battery performing well for as long as possible.

- The battery used is a lead acid battery. It differs from regular Ni-Cd rechargeable batteries in that if it is fully discharged, recharging may be impossible. Ensure that the battery is recharging whenever it is not being used, leave MAIN POWER ON and switch to AC power after finishing with the battery. There is no danger of over-charging the battery.
- Avoid overheating.
If the unit is to be used in a rack, leave the rear of the rack open, leave some space between the unit and the wall, and allow sufficient ventilation.
- If you decide not to use the battery, fully recharge it, remove it from the unit, and store it in a cool, dry place. The battery still naturally discharges in this condition, so every 6 months reconnect to the unit and recharge it.
- If the unit itself is not to be used for a long period, fully recharge the battery, switch MAIN POWER off, and unplug the power cord from the outlet (recharging is unnecessary for a month if this is done). Recharge the battery again before use.

Replacing the battery

If effective life of the battery reduces to about 3–4 hours even after being fully recharged, the battery is approaching the end of its serviceable life.

No.	Name
-----	------

① Main power switch [MAIN POWER, ■ OFF ■ ON]

② Main power indicator [MAIN POWER]

Lights when [MAIN POWER] is on (■), indicating the unit is in standby mode. Recharging begins if the rechargeable battery is connected and its voltage is low.

While this indicator is lit, pressing [POWER] switches the unit between on and standby.

③ Power indicator [POWER]

④ Power “■ STANDBY ○ ■ ON” switch [POWER, ■ STANDBY ○ ■ ON]

Press to switch the unit from on to standby mode and vice versa when [MAIN POWER] is on.

In standby mode, the unit is still consuming a small amount of power.

⑤ Input selector

⑥ Voltage meter [BATTERY]

No.	Name
-----	------

⑦ Operation indicators [AC, DC, CHARGE]

AC: Lights when operating on AC power.

DC: Lights when operating on the battery.

CHARGE: Lights when battery is charging.

⑧ Volume control [VOL. (-dB)]

⑨ Panel open button [PUSH OPEN]

Press to open the panel.

Close by hand.

⑩ Headphone jack [MONITOR PHONES]

⑪ AC/DC operation button [OPERATION]

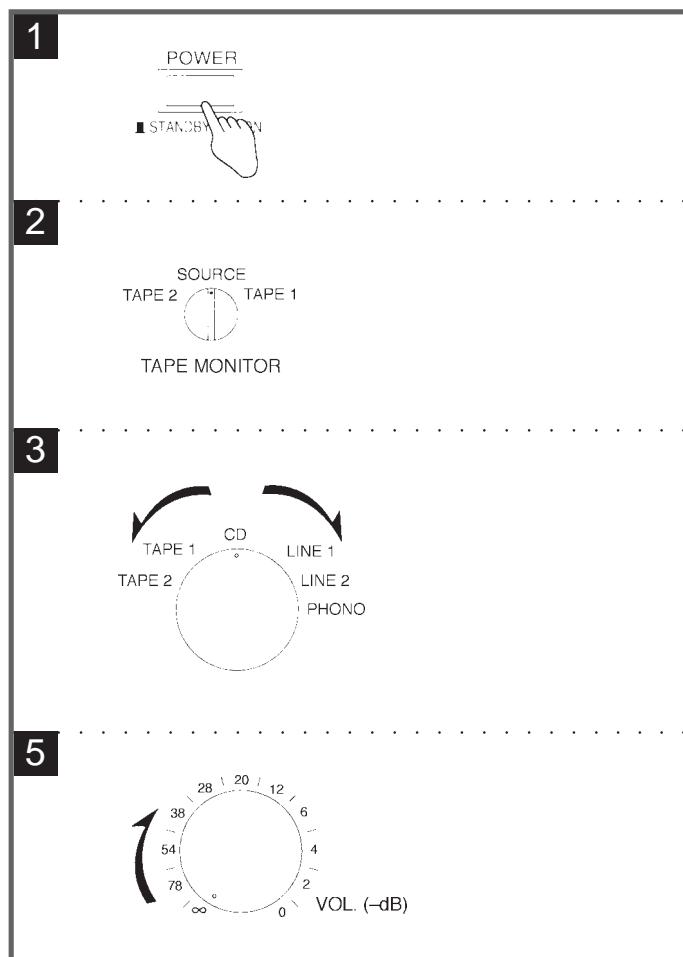

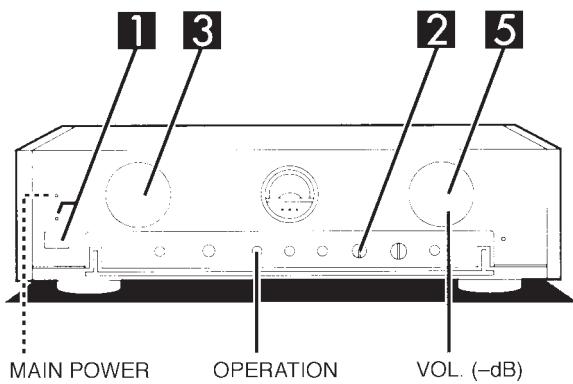

⑫ Voltage meter light button [METER LIGHT]

⑬ Mode selector [MODE]

⑭ Tape-monitor selector [TAPE MONITOR]

⑮ Balance control [BALANCE]

⑯ Balance control ON-OFF button [■ OFF ■ ON]

Preparations:

- Check the MAIN POWER indicator is illuminated.
- Set the volume control [VOL. (-dB)] to the “∞” position.

1 Press [POWER] button to select ■ ON.

POWER indicator lights up.

Next, switch on the power of the power amplifier.

2 Turn [TAPE MONITOR] to select SOURCE.

3 Turn the selector to select the desired source.

TAPE 2: Set to this position to listen to tapes from the tape deck connected to the TAPE 2 terminals.

TAPE 1: Set to this position to listen to tapes from the tape deck connected to the TAPE 1 terminals.

CD: Set to this position to listen to compact discs from the CD player (or CD changer) connected to the CD terminals.

LINE 1: Set to this position to listen to equipment connected to the LINE 1 terminals.

LINE 2: Set to this position to listen to equipment connected to the LINE 2 terminals.

PHONO: Set to this position to listen to phono discs from the turntable connected to the PHONO terminals.

4 Start the desired source.

Refer to the appropriate operating instructions for details.

5 Adjust the volume.

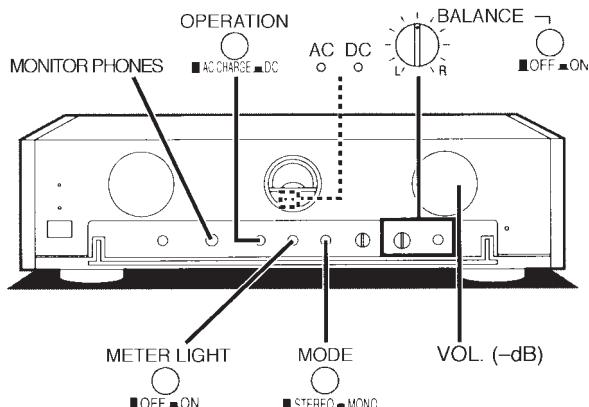

After you are finished

1. Set the volume control [VOL. (-dB)] to the “∞” position.
2. Turn off the power of the power amplifier.
3. Turn the POWER to this and the other units off.

When using a timer, OPERATION should be left in the ■ AC/CHARGE position.

Note

MAIN POWER should normally be left on when POWER is turned off.

Switching between AC and DC operation

AC operates the unit on regular household power, DC operates the unit by the battery.

To change to DC

Press [OPERATION] to select DC.
DC indicator illuminates.

To change to AC

Press [OPERATION] to select AC/CHARGE.
AC indicator illuminates.

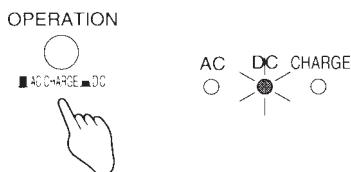

Ensure AC/CHARGE is selected if the battery is not installed.

Sound is interrupted for about 3 seconds when the power source is changed.

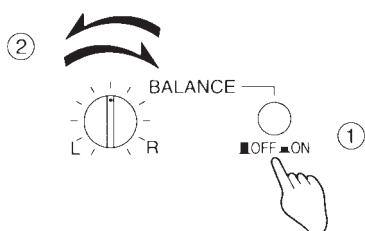

A fully charged battery can operate the unit for a maximum of 6 hours.

The unit automatically switches to AC when battery voltage falls below about 10.5 V.

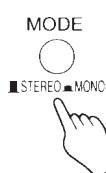

A

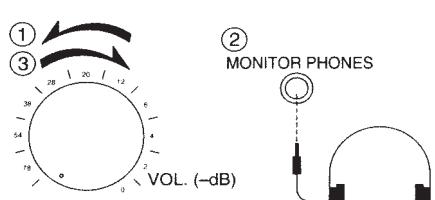

B

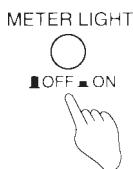

C

D

E

To adjust the sound balance

- ① Press [BALANCE] button to select ON.
- ② Turn [BALANCE] control to adjust the left/right sound balance.

When balance adjustments are unneeded

Press [BALANCE] button to select OFF.

To listen in the monaural mode

Press [MODE] to select MONO.

The left and right sounds will be mixed, and the same sounds will be heard from both speakers.

Leave [MODE] in the STEREO position for normal operation.

To listen through headphones

- ① Set the volume control [VOL. (-dB)] to the “∞” position.
- ② Connect the headphones.
Plug type: 6.3 mm stereo
- ③ Adjust the volume.

Note

Avoid listening for prolonged periods of time to prevent hearing damage.

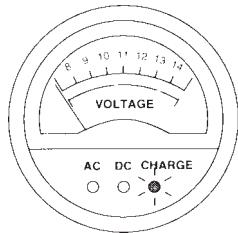

To turn on the meter light

Press [METER LIGHT].

Press again to turn off.

BATTERY

(E)

BATTERY

To check the power source and charging condition

The voltage meter and operation indicators allow you to check the power source being used and the charging condition of the battery.

The following apply when MAIN POWER is ON.

Charging (A)

POWER is standby and the battery is recharging.
The needle remains still.

AC source, charging (B)

The unit is operating on AC power and the needle indicates the charge in the battery.

This occurs in the following two situations.

- OPERATION is in the ■ AC/CHARGE position.
- OPERATION is in the ■ DC position but the unit switched to recharging because the battery charge fell below 10.5 V.

Operating on AC (C)

The unit is operating on AC and the battery is fully charged.
(No volts are being used for charging so the needle remains still.)

The same condition occurs if the battery is not installed.

Operating on DC (D)

The unit is operating by battery.

The needle is in the green zone, indicating the charge in the battery.

The unit switches to AC source, charging (B) when the voltage falls below 10.5 V. See "When battery voltage falls below 10.5 V" below.

Not operating or charging (E)

POWER is standby and the battery is fully charged.

When battery voltage falls below 10.5 V

- There is some variation in the needle indication. For this reason, the needle may not exactly indicate 10.5 V when the unit automatically switches from DC to AC.
- It takes approximately 12 hours for the battery to fully charge. The unit cannot be operated on DC during this time. The indicators change to (C) or (E) when charging is complete.

For your reference

- The battery takes approximately 12 hours to charge irrespective of the charge left in the battery when charging starts. If you begin charging before the battery falls below 10.5 V, then you can use DC power before the battery has completely charged.
- When the battery is approaching full charge, the needle fluctuates in the area between 13.5 V and the upper limit (when POWER is ON). This occurs because charging is nearly finished and does not indicate a malfunction.

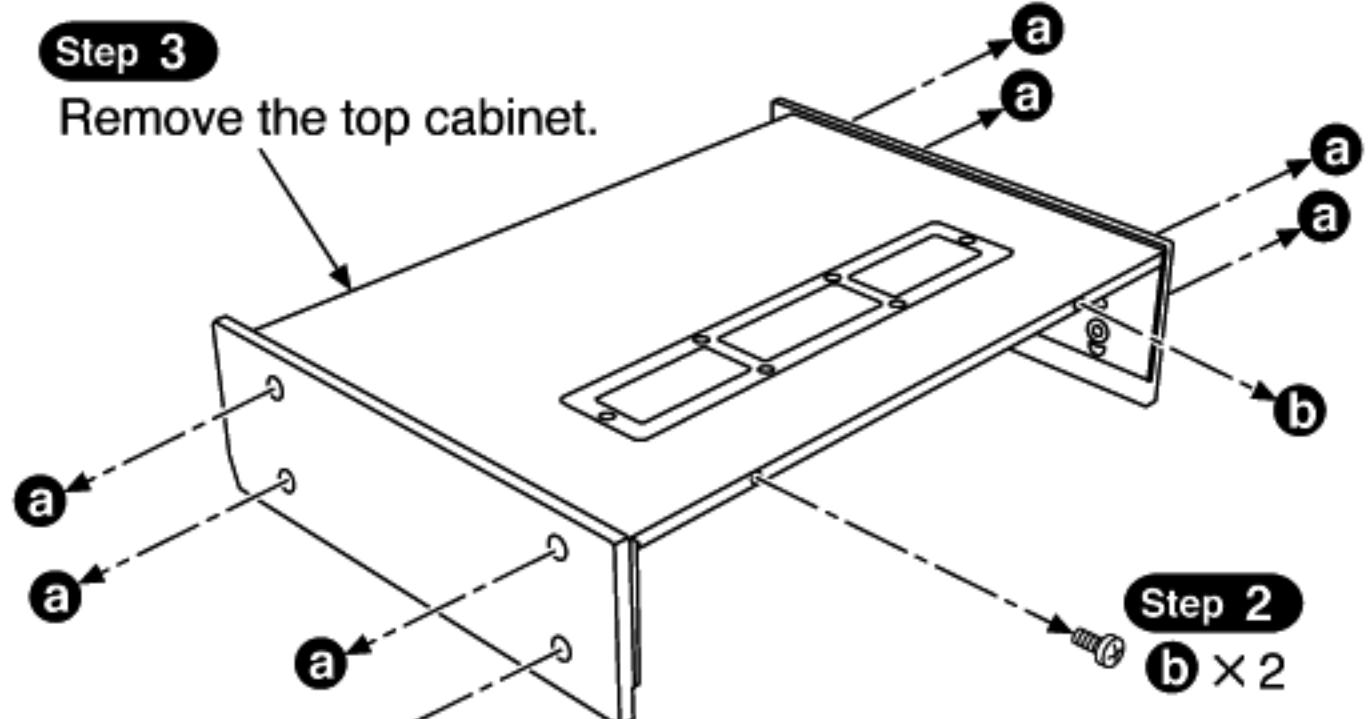

NOTE 1. This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.

2. For reassembly after operation checks or replacement, reverse the respective procedures. Special reassembly procedures are described only when required.

1. Checking for the relay control P.C.B., volume P.C.B. and main P.C.B.

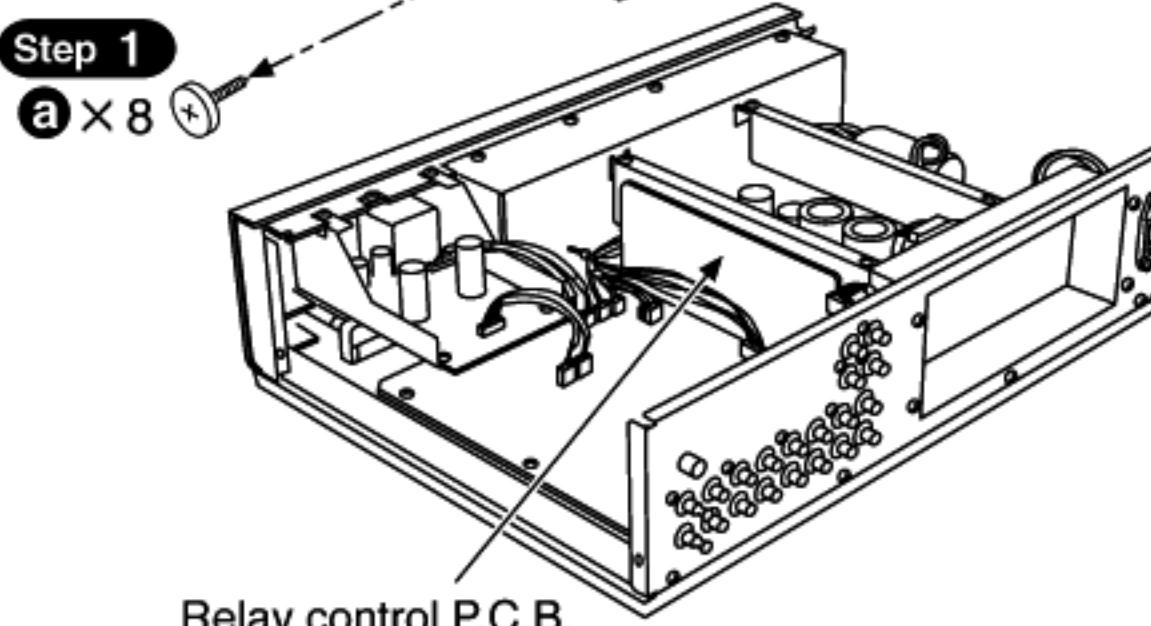

Step 3

Remove the top cabinet.

Step 1

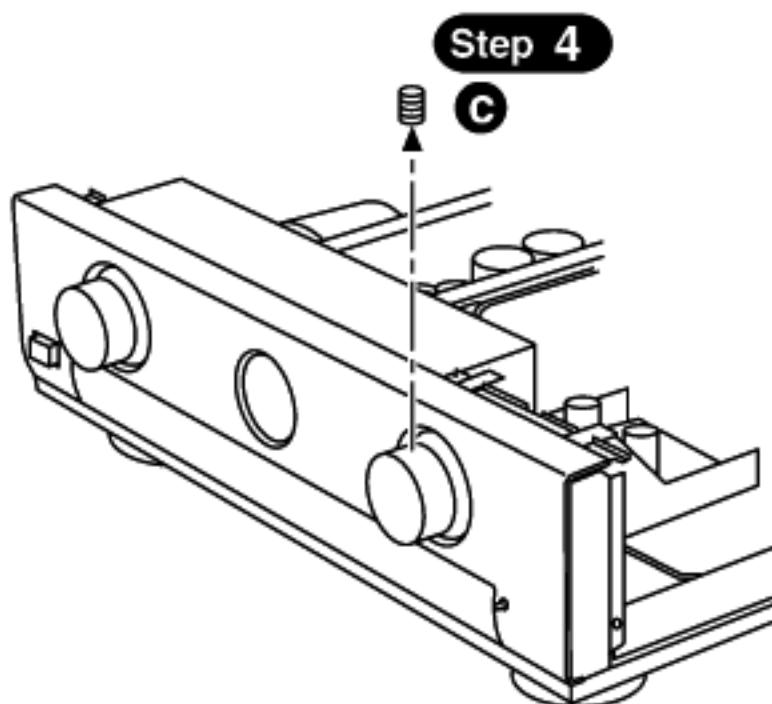

$a \times 8$

• Check the relay control P.C.B. as shown above.

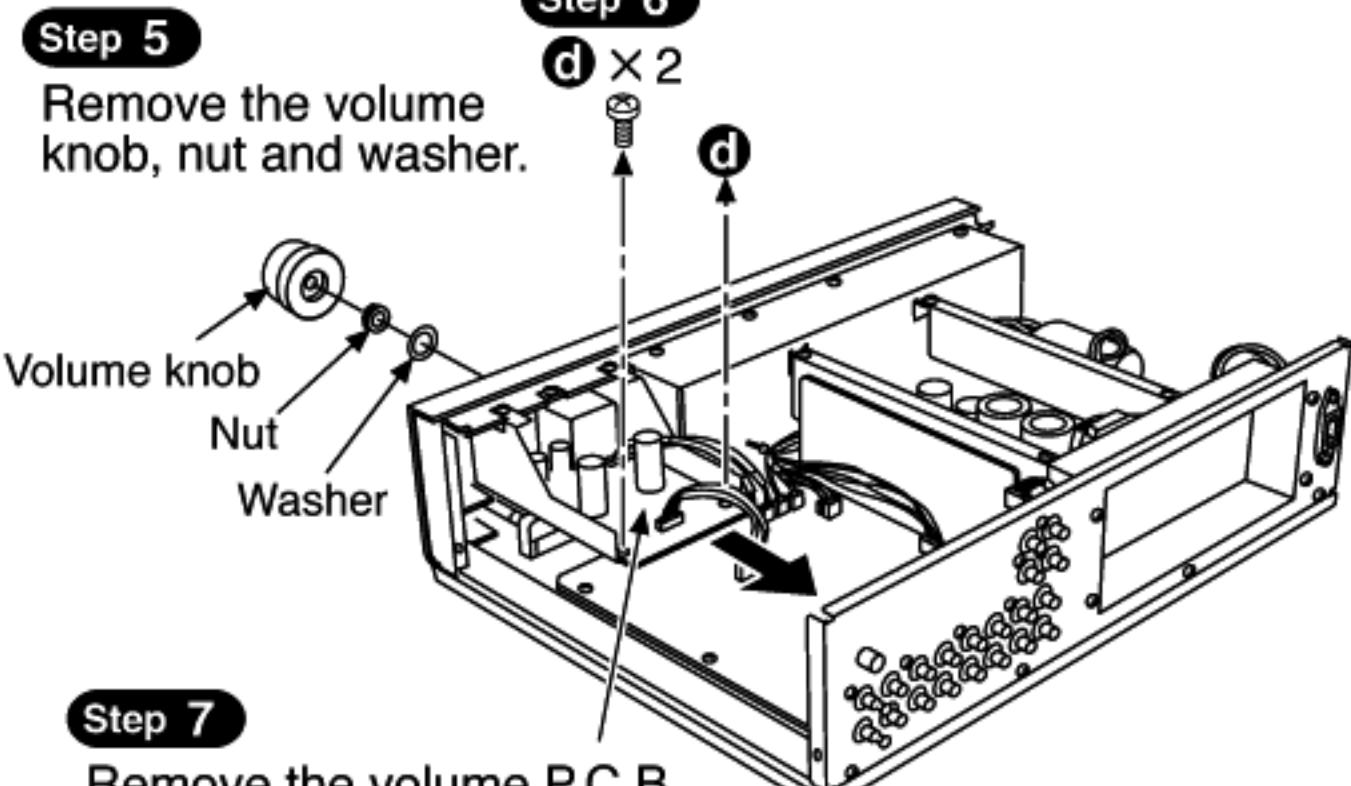

Step 4

c

Step 5

Remove the volume knob, nut and washer.

Step 6

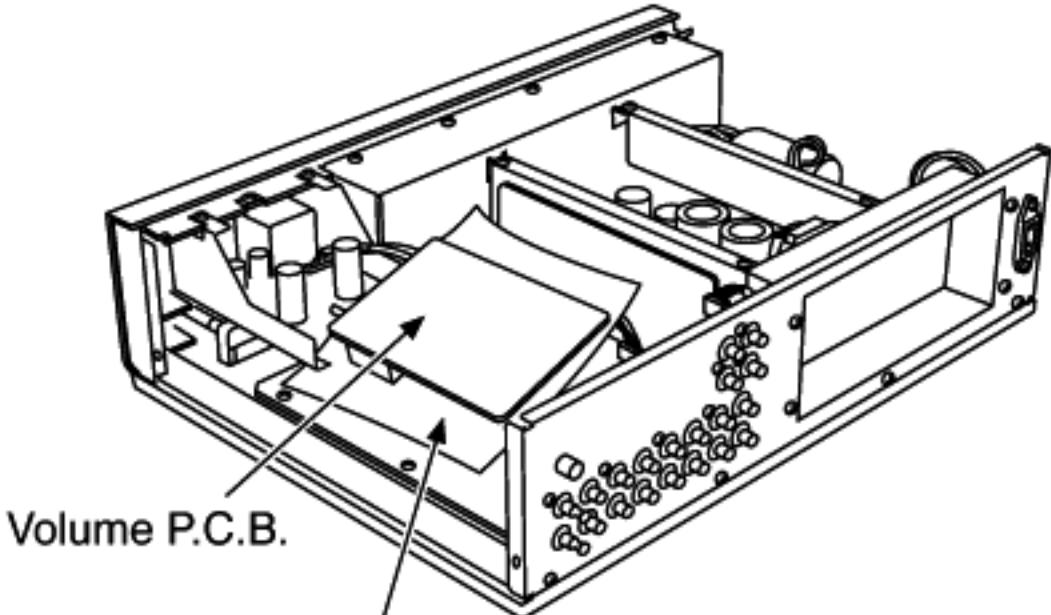

$d \times 2$

Volume knob
Nut
Washer

Step 7

Remove the volume P.C.B.

• Check the volume P.C.B. as shown below.

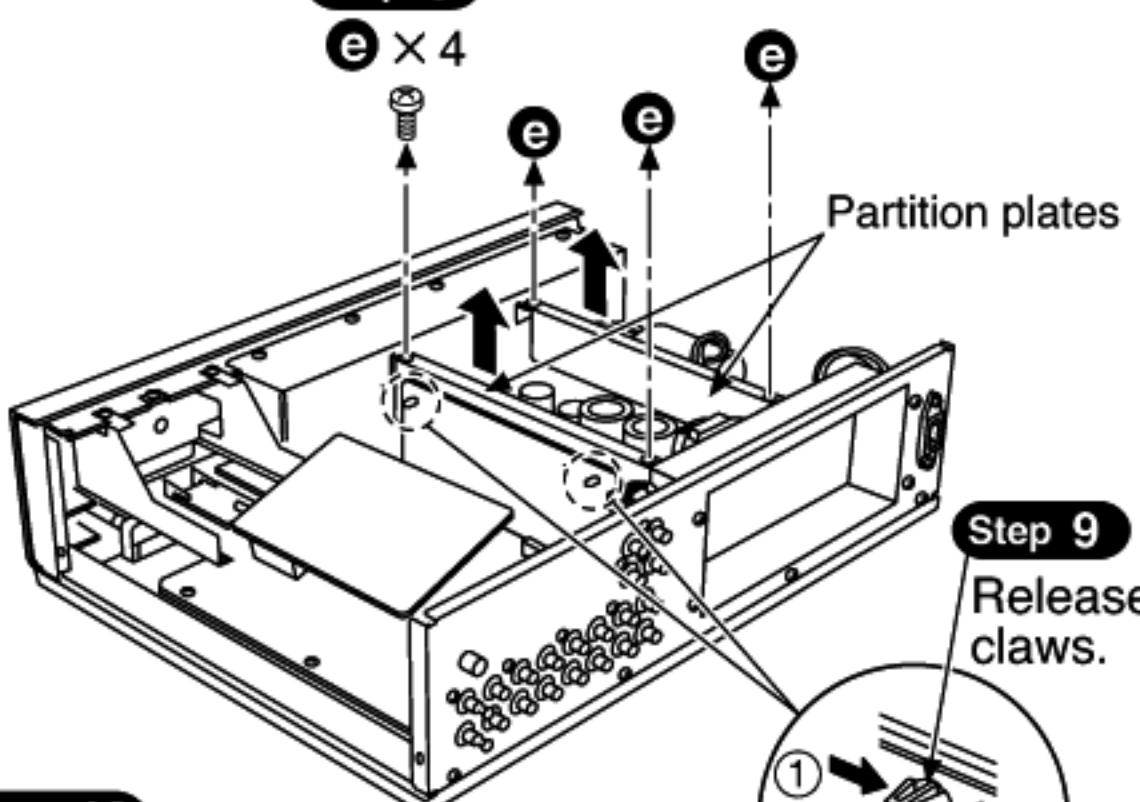

NOTE

Insulate volume P.C.B. with insulation material to avoid short-circuit.

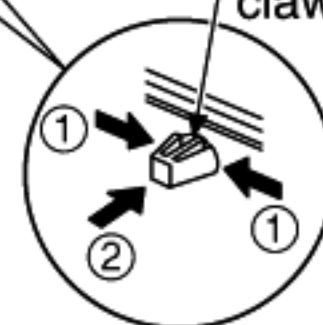

Step 8

$e \times 4$

Step 9

Release the claws.

Step 10

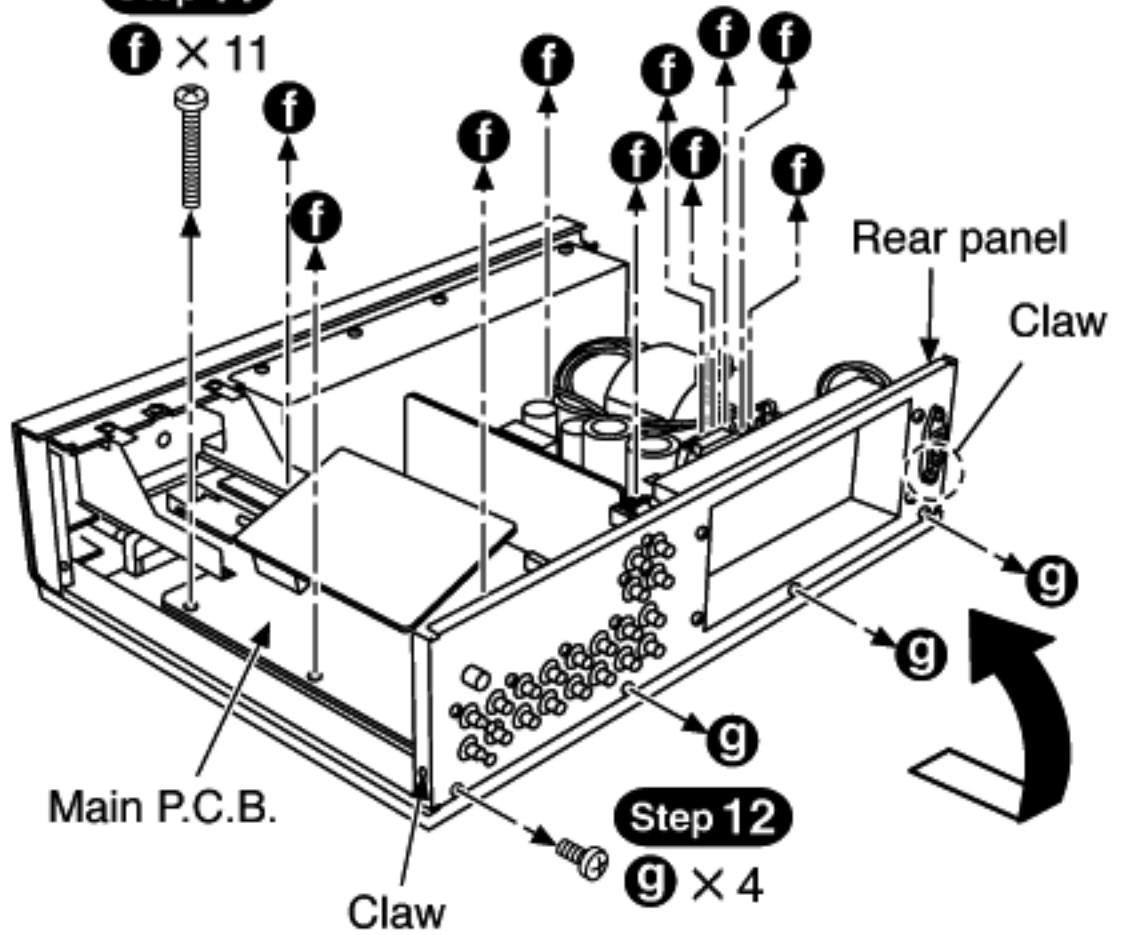

Remove the partition plates in the direction of arrow.

Step 13

Release the 2 claws, and then remove the main P.C.B. and rear panel in the direction of arrow.

Step 11

$f \times 11$

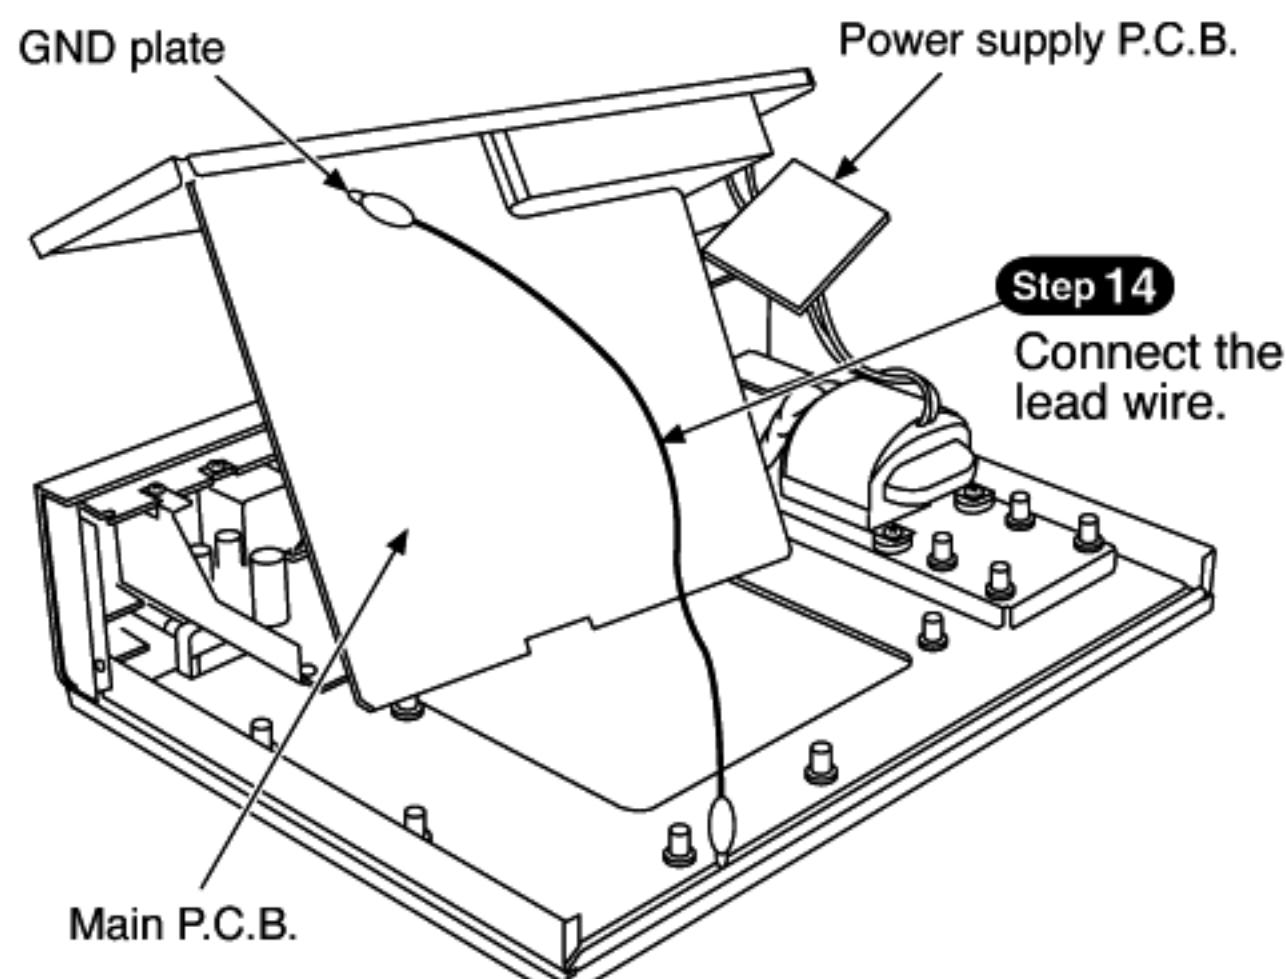

Step 12

$g \times 4$

Claw

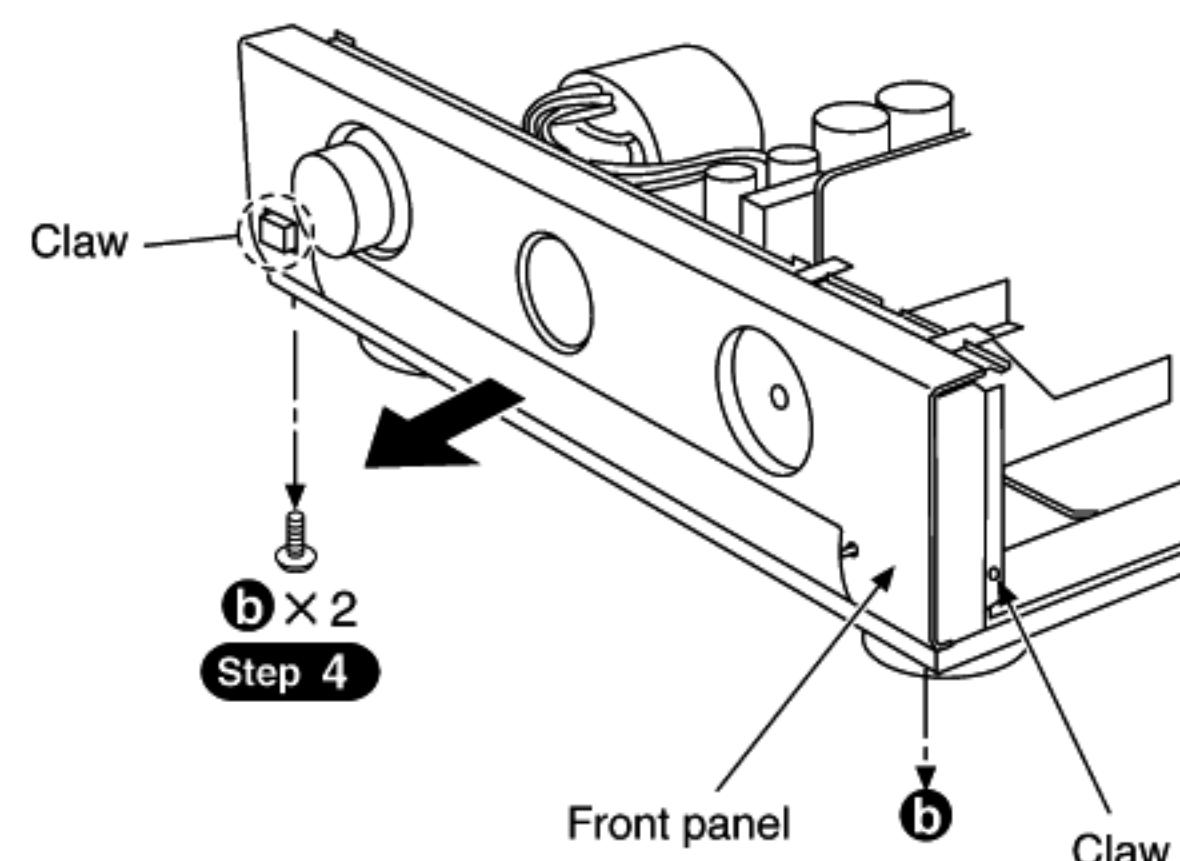

Claw

Check the main P.C.B. as shown below.

Step 5

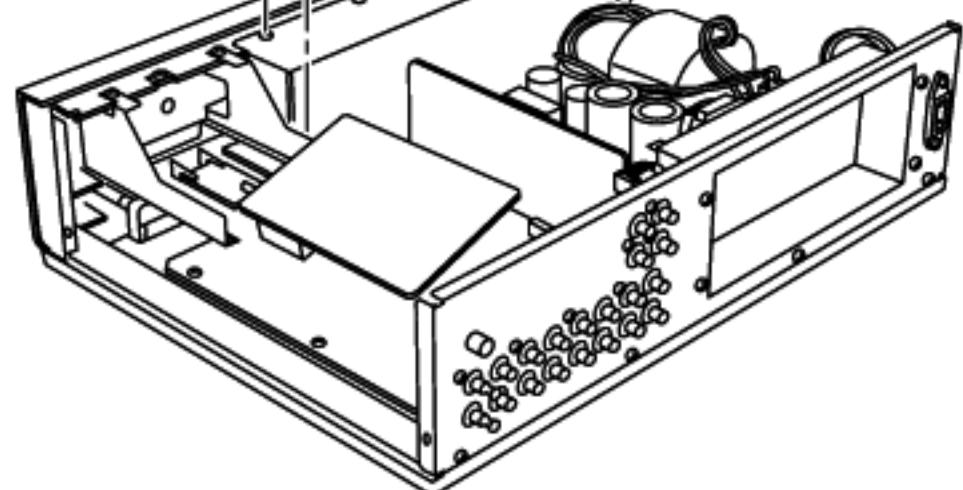

Release the 2 claws, and then remove the front panel.

2. Removal of the operation P.C.B.

Follow the Step 1 ~ Step 10 of the item 1 on page 13.

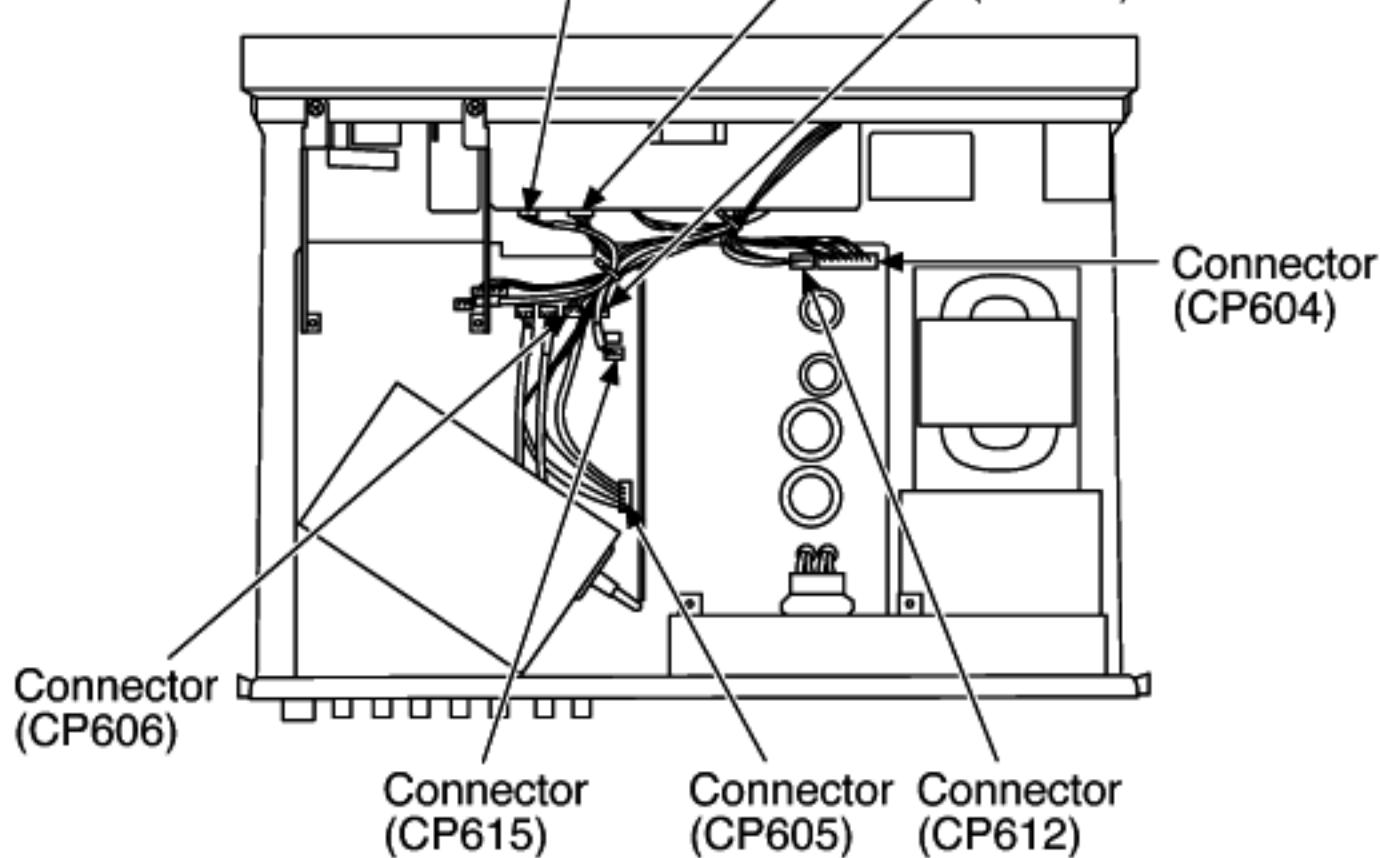

- Step 1
a × 6
Step 2
Remove the shield plate.

Step 3

Remove the 8 connectors.

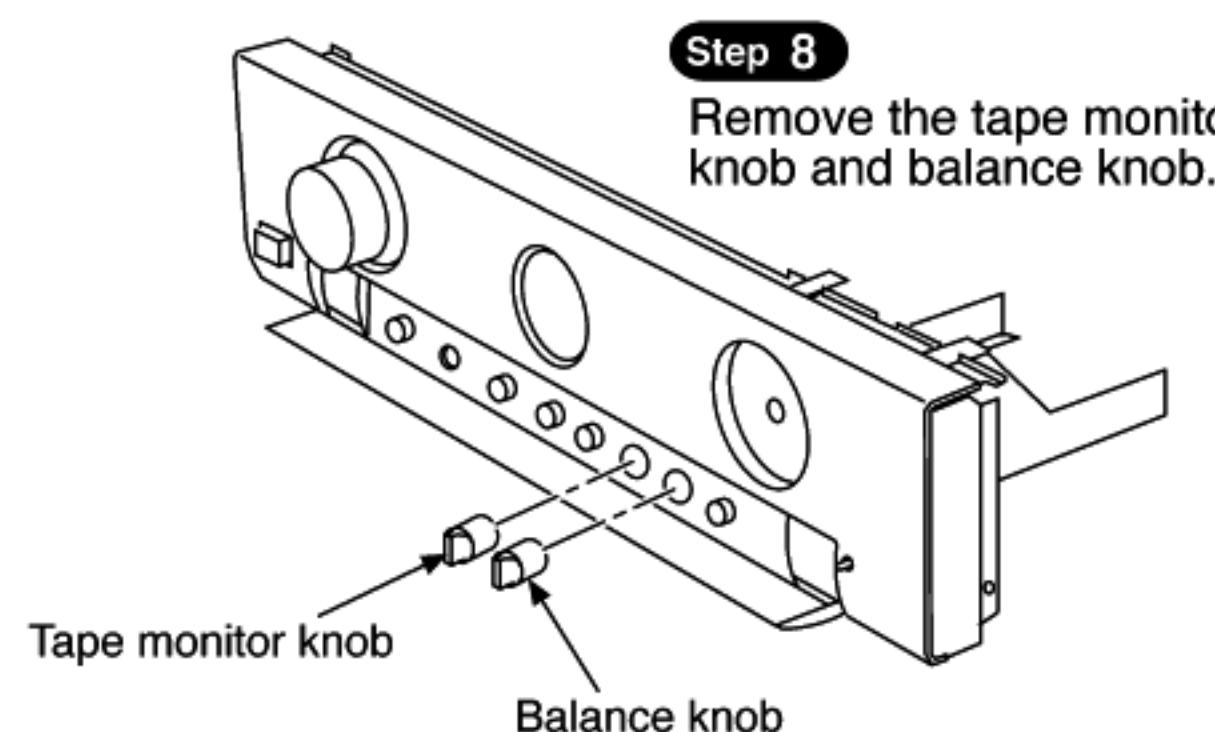

Connector (CP608) Connector (CP607) Connector (CP609)

Step 6

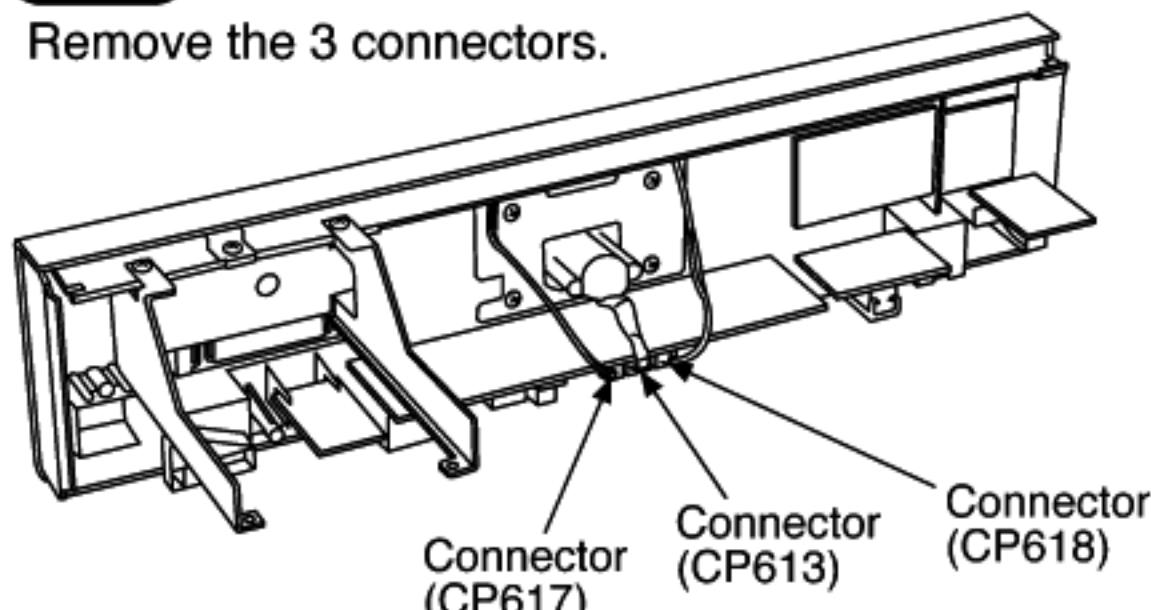

Push the open button.

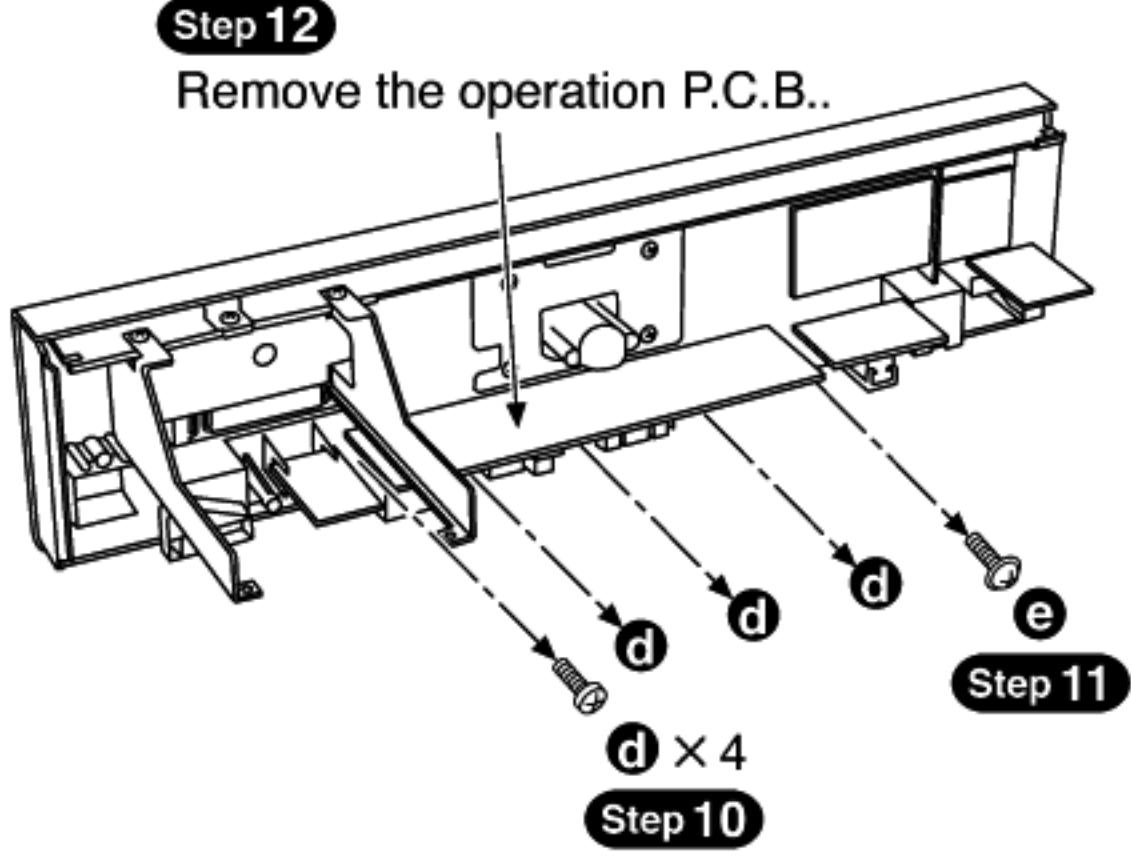

- Step 7
Step 8
Remove the tape monitor knob and balance knob.

Step 9

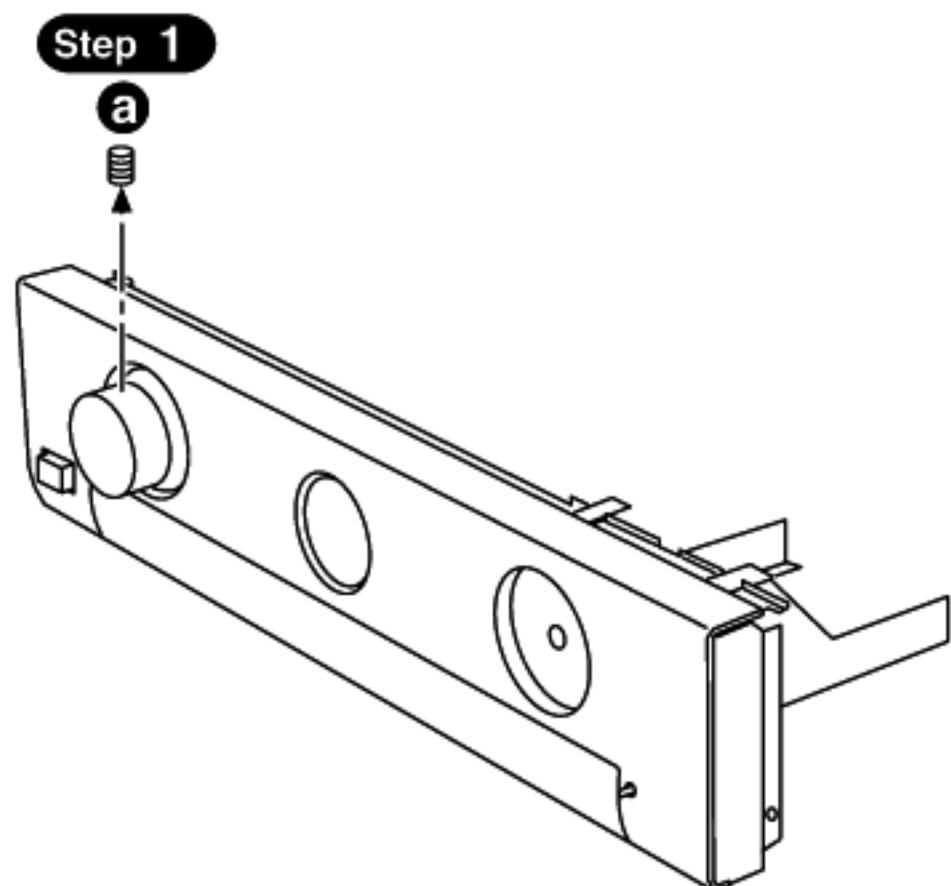

Remove the 3 connectors.

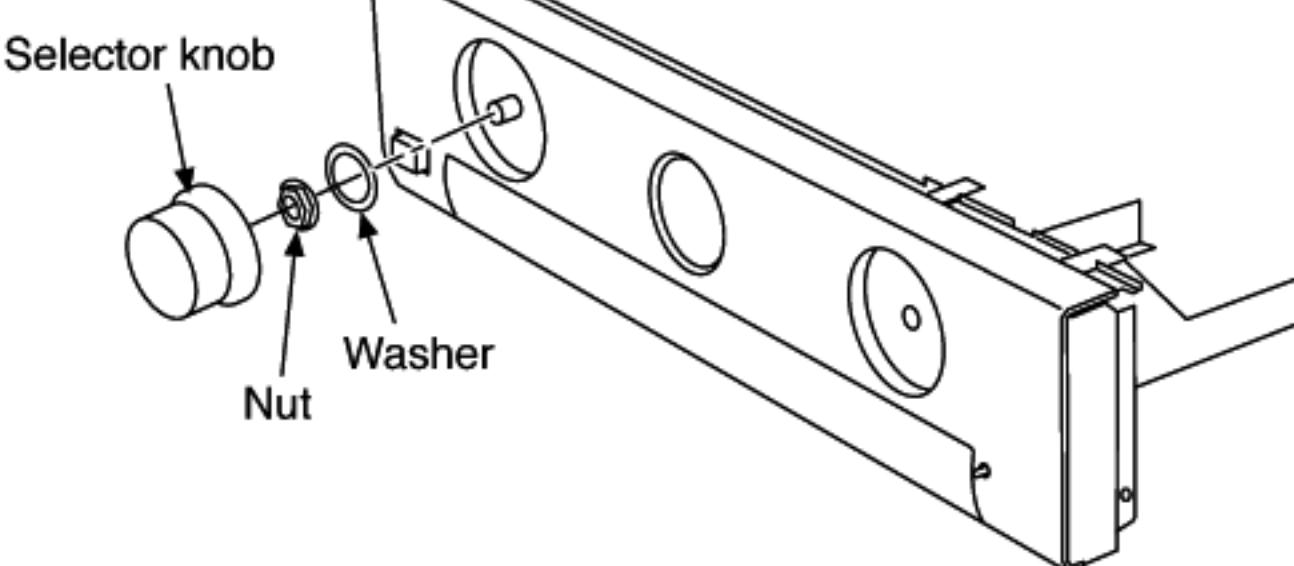

3. Removal of the selector P.C.B.

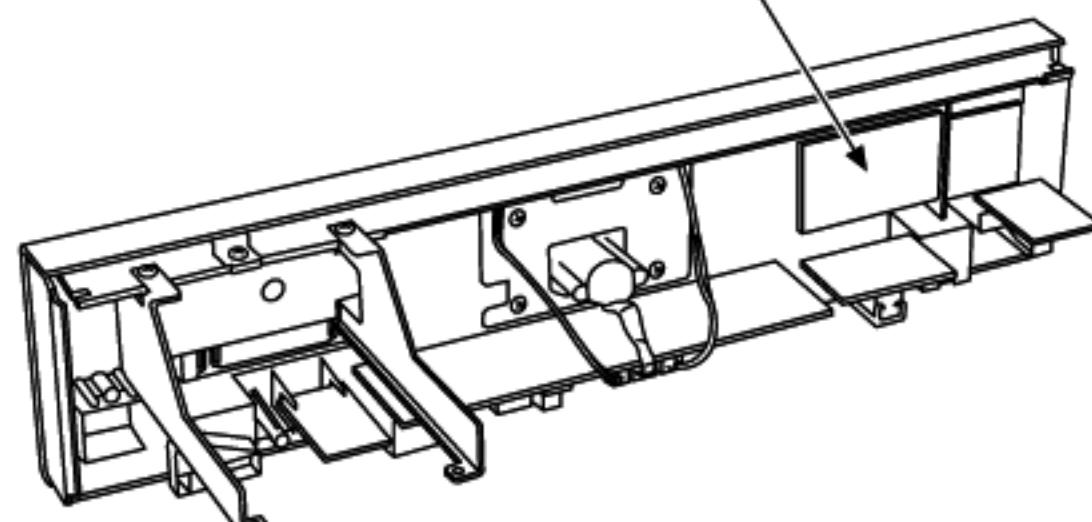

- Follow the **Step 1** ~ **Step 10** of the item 1 on page 13.
- Follow the **Step 1** ~ **Step 5** of the item 2 on page 14.

Step 2
Remove the selector knob, nut and washer.

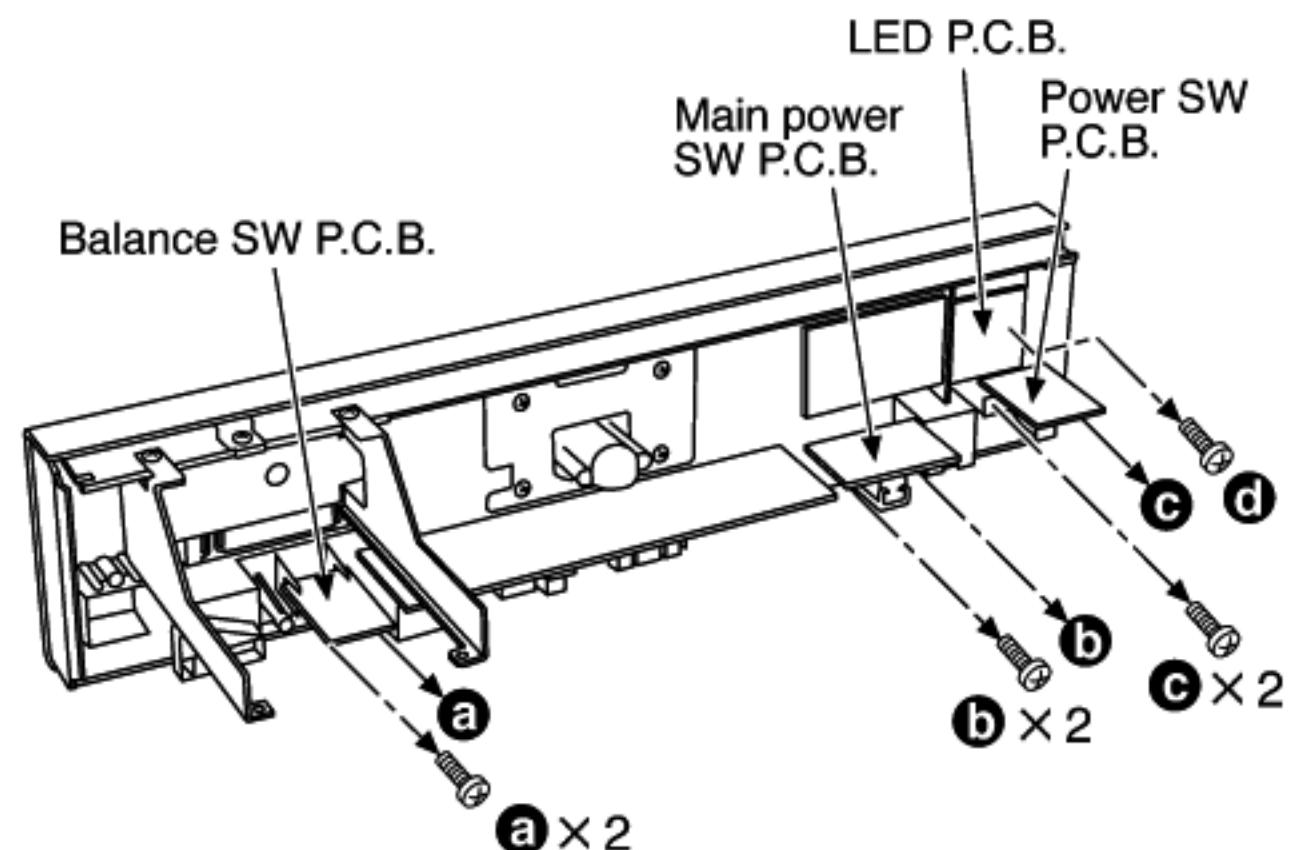

Step 3
Remove the selector P.C.B..

4. Removal of the each P.C.B.

- Follow the **Step 1** ~ **Step 10** of the item 1 on page 13.
- Follow the **Step 1** ~ **Step 5** of the item 2 on page 14.

■ Balance SW P.C.B.

- Remove the 2 screws (**a**).

■ Main power SW P.C.B.

- Remove the 2 screws (**b**).

■ Power SW P.C.B.

- Remove the 2 screws (**c**).

■ LED P.C.B.

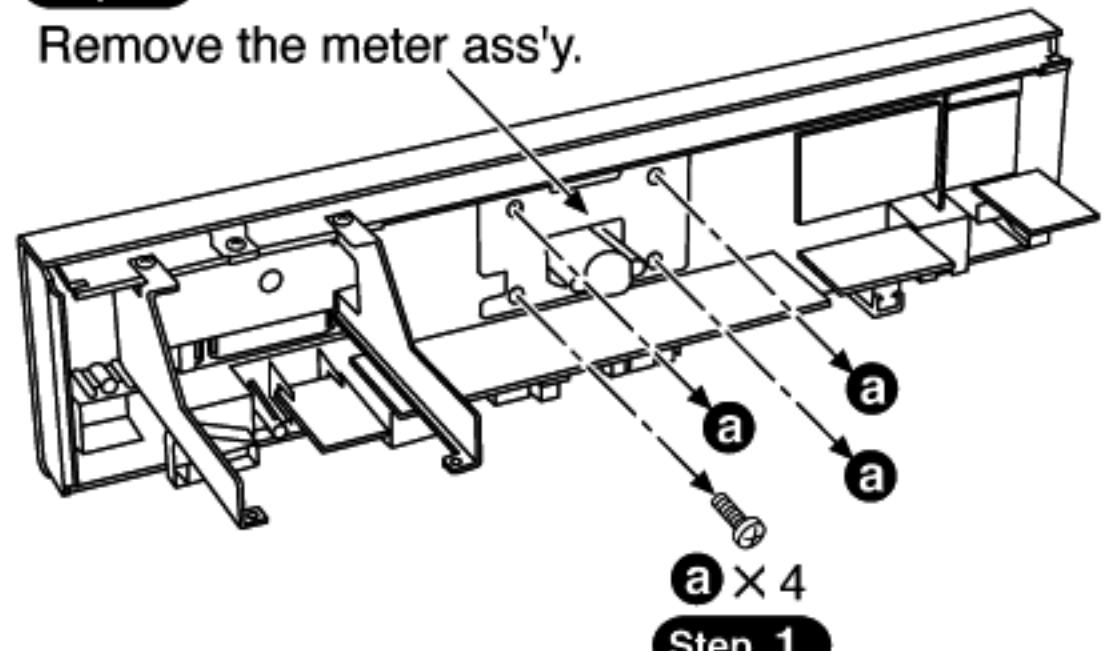

- Remove the screw (**d**).

5. Replacement for the meter

- Follow the **Step 1** ~ **Step 10** of the item 1 on page 13.
- Follow the **Step 1** ~ **Step 5**, **Step 9** of the item 2 on page 14.

Step 2

Remove the meter ass'y.

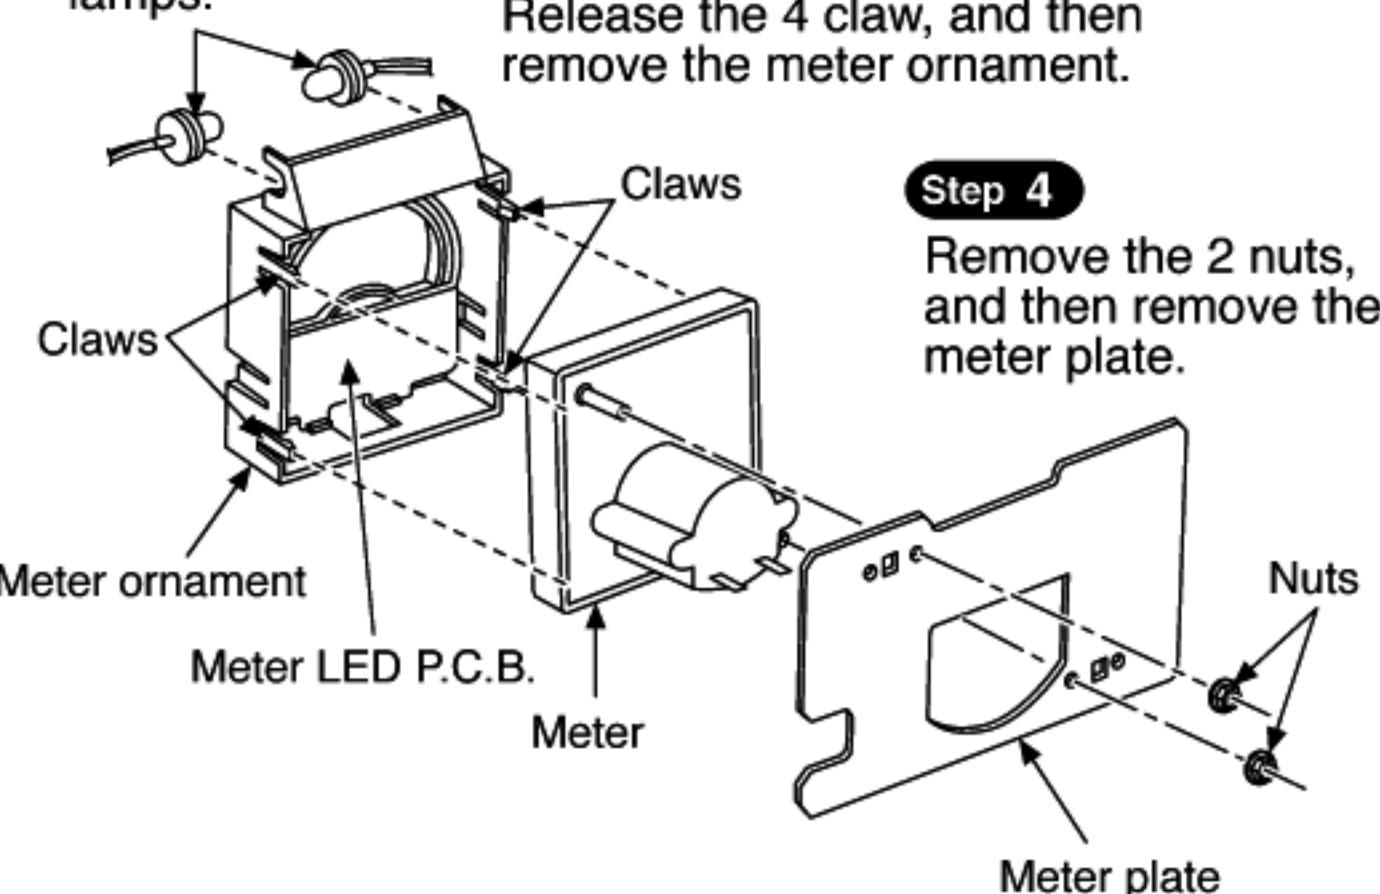

Step 3

Remove the lamps.

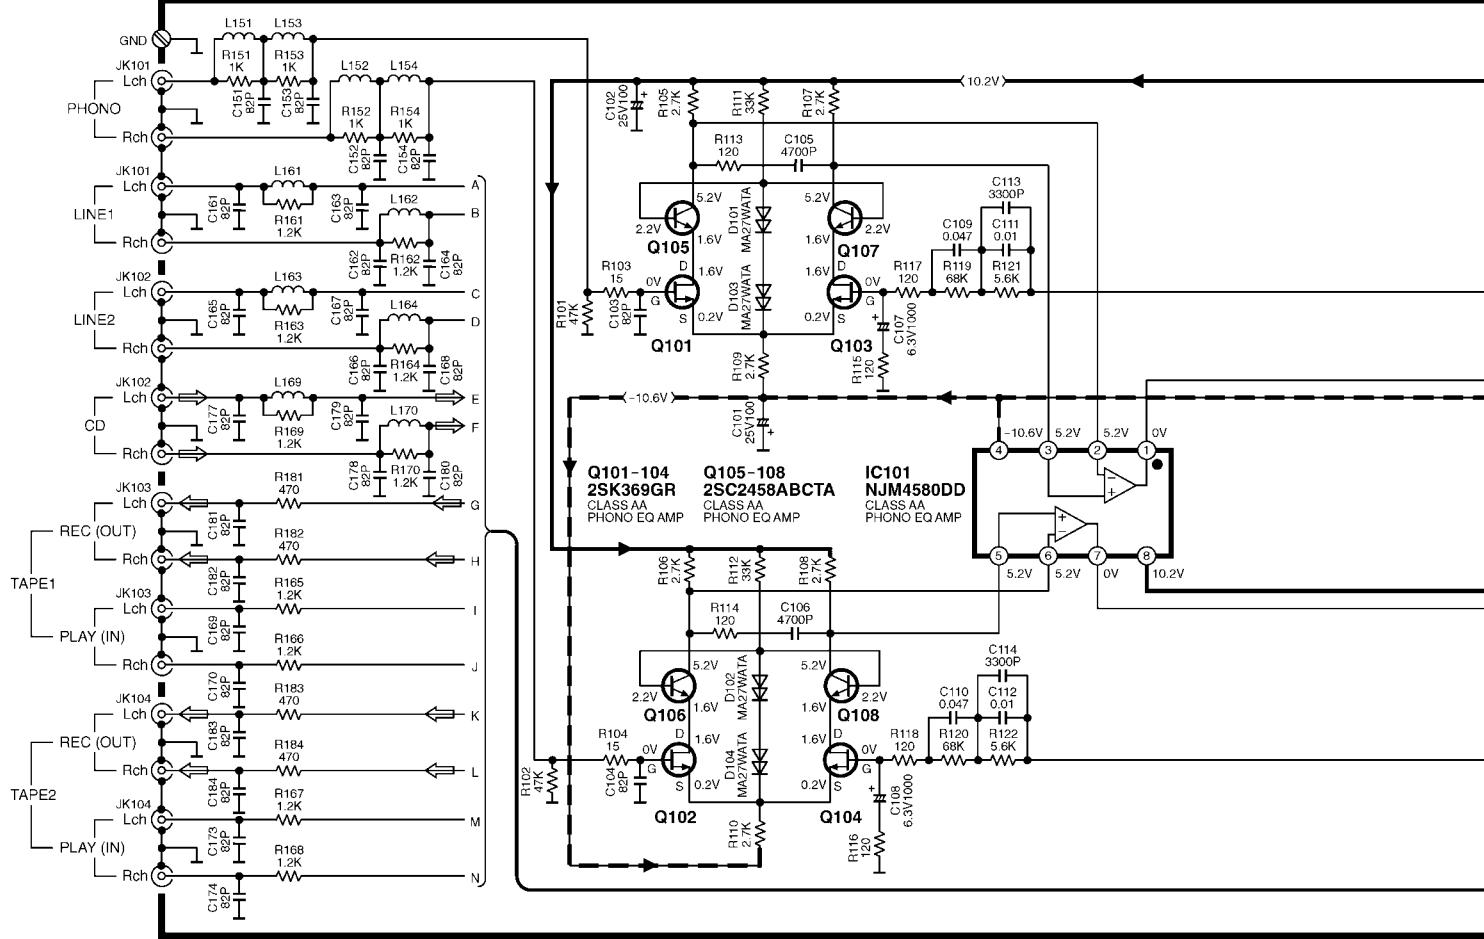

Step 5

Release the 4 claw, and then remove the meter ornament.
