

- Note: 1. All resistors $\frac{1}{2}$ watt unless specified otherwise.
 2. Voltage readings are made with 20M/V meter zero signal and 117V AC line input.
 3. Minimum input signal for power output is 100 millivolts
 4. Hum and noise 75 DB below 19 watts.

CAUTION - Do not remove transistors when power is applied as permanent damage will result to the transistors.
