## SERVICE MANUAL

### IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel.

It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

**WARNING:** Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

**IMPORTANT:** The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

**WARNING:** Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

**IMPORTANT:** Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

## ■ TO SERVICE PERSONNEL

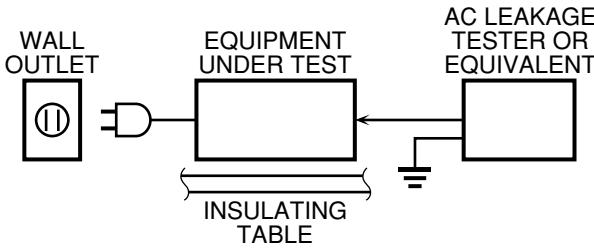

### 1. Critical Components Information

Components having special characteristics are marked  and must be replaced with parts having specifications equal to those originally installed.

### 2. Leakage Current Measurement (For 120V Models Only)

When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.

- Meter impedance should be equivalent to 1500 ohm shunted by 0.15μF.
- Leakage current must not exceed 0.5mA.
- Be sure to test for leakage with the AC plug in both polarities.

## WARNING: CHEMICAL CONTENT NOTICE!

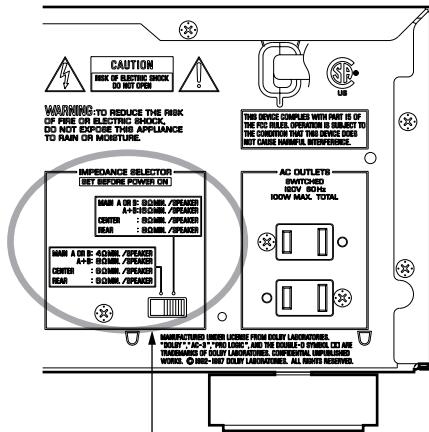

The solder used in the production of this product contains LEAD. In addition, other electrical/electronic and /or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

**DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!**

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

## ■ SELF DIAGNOSIS FUNCTION (DIAG)

There are 14 DIAG menu items each of which has sub-menu items. Listed in the table below are menu items and sub-menu items.

## • Starting DIAG

Press the "POWER" (STANDBY/ON) key of the main unit while pressing the "FM/AM" key and the "INPUT MODE" key simultaneously, and DIAG will be activated.

## • Starting DIAG in the protection cancel mode

If the protection function activates and causes hindrance to trouble diagnosis, disable the protection function as described below, and it will be possible to enter the DIAG mode. (The protection function other than the excess current detect function will be disabled.)

Press the "POWER" (STANDBY/ON) key while pressing the "FM/AM" key and the "INPUT MODE" key simultaneously. At this time, keep pressing the "FM/AM" key and the "INPUT MODE" for 3 seconds or longer.

In this mode, "SLEEP" in the FL display of the main unit flashes.

### CAUTION!

Using this product with the protection function disabled may cause damage to itself. Use special care for this point when using this mode.

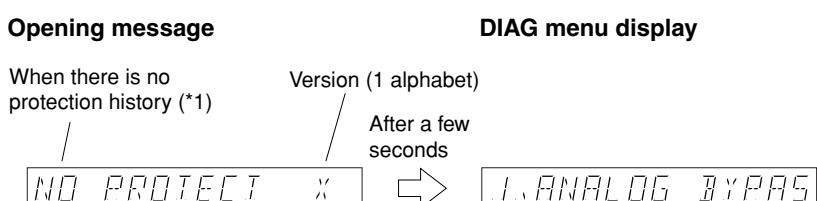

## • Canceling DIAG

Turn off the power by pressing the "POWER" (STANDBY/ON) key of the main unit or the "STANDBY" key of the remote control unit.

**CAUTION:** When canceling this function, check that DIAG menu No.10 PRESET (memory initialization inhibited/reserved) has been set. [To keep the user memory, be sure to select "INHI" (initialization inhibited) from the No.10 PRESET menu before canceling the DIAG function.]

## • Display at the start of DIAG

On the FL display of the main unit, an opening message (including the version and the protection history) appears for a few seconds followed by the diagnostic menu display of 1. ANALOG BYPAS.

(\*1) If a protection function history has been recorded, the type of the protection function and the voltage value recorded last are displayed.

### If the protection function activates after DIAG has been started and the power is turned off;

When the protection function (\*2) activates, the protection function history appears on the display and the power turns off. Repair the faulty parts according to the displayed history.

(\*2) When an excess current or any other faulty condition is found with the power source, DC, etc., the protection function forces the power to turn off.

### I PROTECT display

(When the power is turned on without this abnormality corrected, the protection function activates the moment the power relay is turned on to shut off the power relay. The display will not light.)

**Cause:** There is an abnormal current flow to the power amplifier.

**Supplementary information:** As the current of the power transistor of each channel is detected, the abnormal channel can be identified by checking the current detect transistor.

**PS PRT > 000 X**

### PS PRT display

(When the power is turned on without this abnormality corrected, the protection function activates about 1 second later to shut off the power relay. Display may not light if there is an abnormality with the power supply for the display.)

**Cause:** There is an abnormality in the power supply section (voltage).

**Supplementary information:** As the power from the following sources is detected, it is possible to determine where an abnormality exists.

Main (5): Transformer secondary winding  
CB222 (AC voltage)

Input (4): Regulated power supplies  
±25, +12A, +12B, -12, +5D

**DC PRT > 000 X**

### DC PRT display

(When the power is turned on without this abnormality corrected, the protection function activates about 3 seconds later to shut off the power relay.)

**Cause:** A DC output from the power amplifier of any channel is detected.

Besides the above possible causes, the cause may be a disconnected connector or around the CPU.

PS PRT and DC PRT displays include the abnormal A/D value in % (voltage value obtained by considering 5V as 100%). Concerning this value, refer to DIAG menu No.11 AD DATA CHECK.

#### • Protection history

When the protection function has activated, its history is stored in memory with a memory backup. Even when no abnormality is noted while the unit is being serviced, an abnormality which has occurred previously can be defined as long as the backup data has been stored. The protection history should always be cleared before returning the unit from service.

The protection history is cleared when DIAG is cancelled by selecting "RSRV" (Memory initialization) from the setting items of the DIAG menu No.10 PRESET or when the backup data is erased.

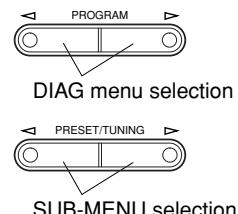

## • Operation procedure of DIAG menu and SUB-MENU

There are 14 MENU items and some SUB-MENU items as well.
