DISASSEMBLY PROCEDURE

1. Removing the Top Cover

Remove screws ① and ② from both sides and then remove the top cover. (See Photo 1)

Photo 1

2. Removing the Bottom Cover

Remove tapping screws ① to ⑧ and then remove the bottom cover. (See Photo 2)

Photo 2

3. Removing the Front Panel

- Remove the top and bottom covers.
- Using a hexagon wrench (1.5) as shown in Photo 5, loosen the hexagon set screws, and pull out the REC LEVEL, AUTO FUNCTION and OUTPUT knobs.

Photo 3

- Pull out the connectors ① (A) and ② (B) as well as the power indicator lamp ③ (C), shown in Photo 4.
- Remove screws ④ (1) to ④ (4) in Photo 4 from under the tape.
- Turn over the main body. Pull out the connectors ④ (D), ⑤ (E) and ⑥ (F) in Photo 3. Also, remove screws ⑤ (5) to ⑦ (7).

Photo 4

Photo 5

- Open the head lid toward you, and front panel will remove.

4. Removing the mechanism assembly

- Remove the front panel. (Refer to step 3)
- Disconnect the mechanism assembly lead wires at the connector.
- Disengage the tape counter's rubber belt.
- Pull out the three fixing metals of the MIC and PHONES jacks toward the right side. (See Photo 6)
- Remove screws ① (1) to ⑤ (5) shown in Photo 6 and then remove the mechanism assembly.

Photo 6

SPECIFICATIONS

Track Configuration 4-track 2-channels
Stereo Cassette Deck

Mechanical Section

Tape Speed 4.8cm/sec±1%
Wow and Flutter 0.04% (JIS,WRMS), 0.15% (DIN)
Rapid Transport (F.FWD/REW) Within 78sec (for C-60 cassette)
Motor DC motor
Operation Logic Controlled Feather Touch Operation
 Full auto shut-off system
Mechanism One Motor, 2 plunger mechanism

Head Section

Recording/Playback Pure Sendust Head
Erase Ferrite Head corresponding to Metal Tape

Amplifier Section

REC/PB Frequency Response (-20VU)
 30 to 16,000Hz ±3dB (for LH tape)
 30 to 18,000Hz ±3dB (for CrO₂ tape)
 30 to 19,000Hz ±3dB (for Metal alloy tape)

Input Sensivity/Impedance MIC: 0.3mV/5kΩ
 LINE: 50mV/100kΩ

Output Level/Impedance

LINE: 340mV/50kΩ (160nWb/m, P.B Vol. MAX)
 PHONE: 4.8mW/150Ω

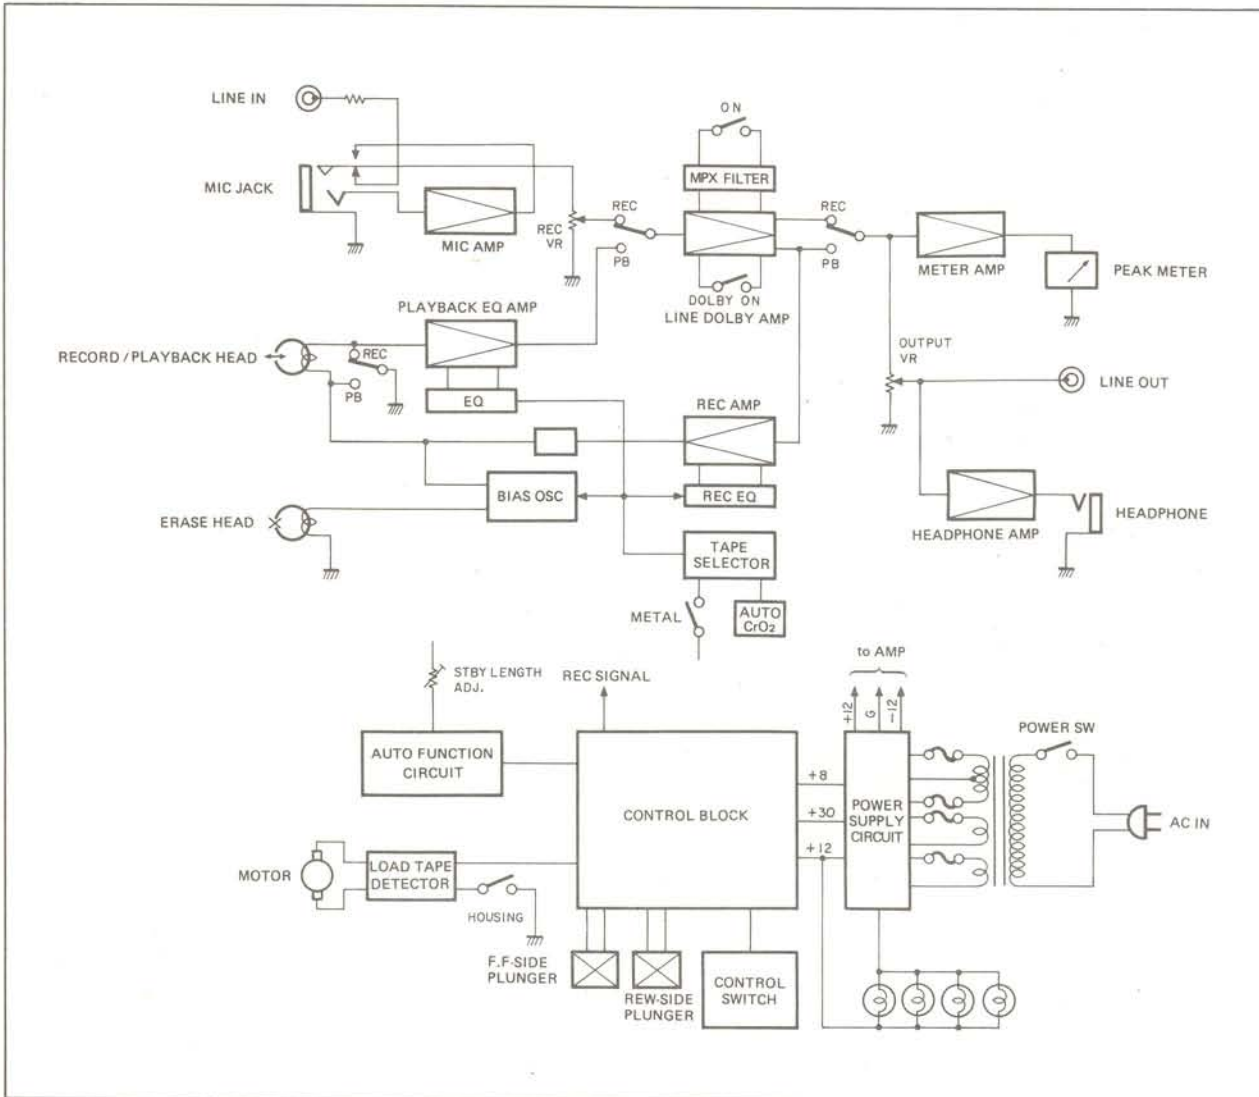

Dolby NR Effect 9dB, or more
Signal-to-Noise Ratio (CrO₂ tape) better than 52dB (DIN 333Hz
 3% without Dolby)
Overall Distortion Less than 1.0% (for LH tape)
 Less than 1.5% (CrO₂ tape)
 Less than 1.0% (Metal tape)
 (160nWb/m, 1kHz)

General

Semiconductors 2FETs, 74 Transistors, 16 ICs, 33Diodes
U.S. and Canadian Models 120C AC60Hz
North European Model 220V AC50Hz
General Model 110 to 130V/220 to 240V AC50/60Hz
British and Australian Models 240V AC50Hz
Power Consumption 30W
Dimensions 435 x 111.5 x 326.5 mm
 (W x H x D) (17-1/8 x 4-3/8 x 12-7/8")
Weight 6.6kg (14.5 lbs)

Specifications subject to change without notice.

BLOCK DIAGRAM

ADJUSTING POINTS

OVERALL ADJUSTMENT

BEFORE ADJUSTMENT;

- 1) Turn off the DOLBY NR switch.
- 2) Do head-erasing and head-cleaning when specially adjusting frequency response and azimuth in order to prevent error caused by magnetization and contamination.

1. ADJUSTMENT OF PLAYBACK RELATION

1-1 Adjustment of Tape Speed

- 1) Connect the frequency counter to the LINE OUT terminals of the left or right channel.
- 2) Set the OUTPUT control at maximum position, play back the center part of the speed adjustment tape MTT-111 (3kHz) and adjust the semi-fixed variable resistor in the motor as the frequency counter shows 3000Hz plus 15Hz minus 5Hz.

1-2 Adjustment of Playback Level

- 1) Adjust left and right channels by the following procedures.
- 2) Connect the AC voltage meter to the LINE OUT terminal.
- 3) Play back the playback adjustment tape MTT-212C (160nWb/m), set the OUTPUT control at maximum position and adjust VR101 (L-ch) and VR102 (R-ch) so as to obtain -7 ± 1 dBm signal at the LINE OUT terminals.

Note: When using the adjustment tape recorded 250nWb/m (MTT-112), adjust them so as to obtain -3 ± 1 dBm.

1-3 Confirmation of Playback Frequency Response

• Adjustment of Head Azimuth

- 1) Remove the HEAD LID and the HEAD COVER UNIT by removing two screws located on its under part.
- 2) Connect two units of AC voltage meter respectively to the LINE OUT terminals left and right channels.
- 3) Play back the azimuth adjustment tape MTT-114 (10kHz) and adjust the AZIMUTH ADJUSTMENT screw installed in the left side of the REC/PB HEAD as shown to obtain equal levels of both left and right channels at maximum output.
- 4) Paste the screw lock on it after adjustment.

• Confirmation of Playback Frequency Response

- 1) Confirmation left and right channels by the following procedures.
- 2) Connect the AC voltage meter to the LINE OUT terminal.
- 3) Set the FOCUS switch at "SHARP" position and MPX FILTER switch at "OFF" position.
- 4) Play back the playback frequency response test tape MTT-216U (LH) or MTT-116K (CrO₂) and make sure of keeping playback level at 315Hz and within ± 3 dB at 10kHz.

2. ADJUSTMENT OF RECORDING RELATION

2-1 Adjustment of Peak Level Meter

Note: Be sure to do this adjustment more than 5 minutes passed after switched on.

- 1) Adjust left and right channels by the following procedures.
- 2) Connect respectively the low frequency oscillator to LINE IN terminal and AC voltage meter to the LINE OUT terminal.
- 3) Rotate VR107, 108, 109, 110 mechanically at the center position.
- 4) In recording mode, supply the signal to the LINE IN terminal to obtain a signal of +1dBm, 1kHz at the LINE OUT terminal.

- 5) Adjust VR107 of the left channel and VR108 of the right channel so as to indicate -30 ± 5 dB in the PEAK LEVEL METERS when supplying a 30dB decreased signal.
- 6) Adjust VR109 of the left channel and VR110 of the right channel so as to indicate 0 ± 1.5 dB in the meters when supplying a 30dB increased signal.
- 7) Repeat the procedures 5), 6) and 7) several times.

2-2 Adjustment of Recording Level

- 1) Adjust left and right channels by the following procedures.
- 2) Connection is the same as in procedures 2-1-2).
- 3) In recording mode, supply the signal to the LINE IN terminal so as to obtain the signal -7 dBm 333Hz (or 315Hz) at LINE OUT terminal.

- 4) Record this signal on the reference tape AC-511 (CrO₂).
- 5) Play back this tape and adjust VR111 of the left channel and VR112 of the right channel so as to obtain a playback level of -7 ± 1.5 dBm.

2-3 Adjustment of recording Bias

Note: Set the FOCUS switch at "SHARP" position and DOLBY NR switch at "OFF" position. Connection is the same as in procedures 2-1-2).

1. "CrO₂" Position

- 1) Supply a signal 20dB lower than Reference recording level of 40Hz to 16kHz and set the level so as to obtain a signal of -27 dBm (-20 VU) at the LINE OUT terminal.
- 2) By using the reference tape AC-511 (CrO₂), record and play back this signal and adjust VR113 and 114 so as to satisfy the playback

level of each frequency against the playback level of 315Hz (or 333Hz) as in the undershown chart. When setting the DOLBY NR switch to "ON" or "OFF" position, make sure of its variation.

- 3) Set the input level at 1kHz, indicating -8dB , 0VU in the PEAK LEVEL meter, and make sure that the total harmonic distortion of the recording and playback is less than 2.5%.

2. "LH" Position

- 1) After the abovementioned procedures, by using the tape of MAXELL UD-60 record and play back the signal of 40Hz to 14kHz, and adjust VR116 in order to satisfy the undershown chart as same as the procedure 2-3-1-2).
- 2) Repeat the procedure 2-3-1-3) and make sure that the total harmonic distortion of the recording and playback is less than 2.0%.

3. "METAL" Position

- 1) Set TAPE SELECTOR at "METAL" position.
- 2) By using the reference tape AC-701* (Metal), record and play back the signal of 40Hz to 18kHz and adjust VR115 in or to satisfy the undershown chart as same as the procedure 2-3-1-2).

- 3) Repeat the procedure 2-3-1-3), and make sure that the total harmonic distortion is less than 2.0%.

* Instead of AC-701, MA-RC46 manufactured by TDK may be used.

3. CONFIRMATION OF STBY ACTION

- 1) Turn fully counterclockwise "STBY LENGTH ADJ", VR117 located on the rear panel.
- 2) Let STBY function and make sure that the figure of TAPE COUNTER shows 3 ± 1 .

4. CONFIRMATION OF BIAS OSCILLATOR FREQUENCY

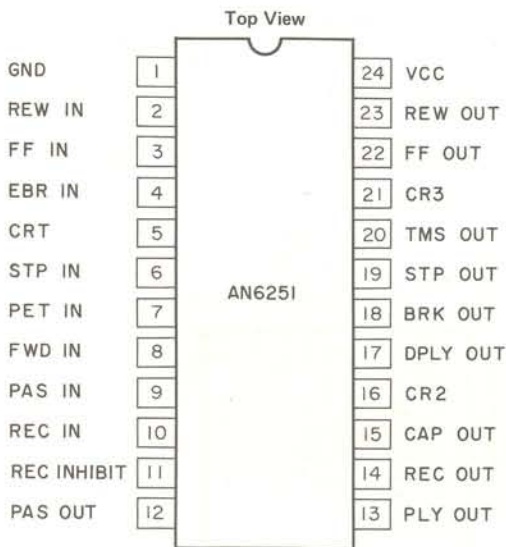

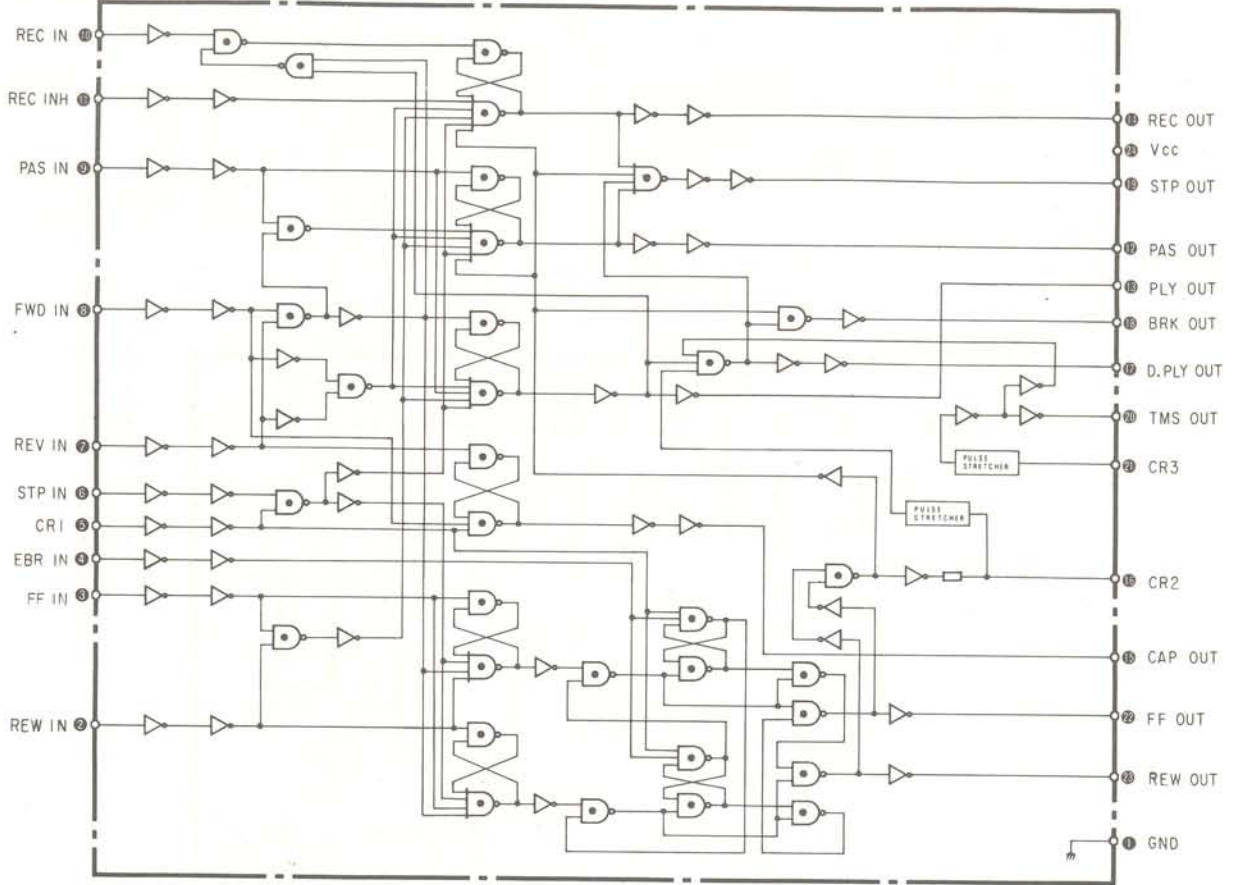

Connect the frequency counter to both end of the resistor R103 (10Ω) and make sure that the counter shows $105\text{kHz} \pm 10\text{kHz}$.

Notes:

1. Reference Playback State means that, when the reference tape of 315Hz or 333Hz is played back, the LINE OUT terminal obtains 160nWb/m the signal of -7dBm lower than reference output level.
2. Reference Recording Level is the recording level to obtain the same output level as the reference playback level of 315Hz or 333Hz 160nWb/m .
3. Regular Recording state means that the unit is adjusted to have reference recording level when the signal of 315Hz or 333Hz is supplied to the LINE IN terminal with reference input level, which obtains reference recording level.
