IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel.

It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

■ TO SERVICE PERSONNEL

1. Critical Components Information
Components having special characteristics are marked  and must be replaced with parts having specifications equal to those originally installed.
2. Leakage Current Measurement (For 120V Models Only)
When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.
 - Meter impedance should be equivalent to 1500 ohm shunted by 0.15µF.
 - Leakage current must not exceed 0.5mA.
 - Be sure to test for leakage with the AC plug in both polarities.

WARNING: CHEMICAL CONTENT NOTICE!

The solder used in the production of this product contains LEAD. In addition, other electrical/electronic and /or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

■ AMP ADJUSTMENTS

Confirmation of Idling Current

- Right after power is turned on, confirm that the voltages of between R111-R135 and R112-R136 are between 0.1mV and 10mV.
- If they exceed 10mV, cut R175, R176. Then reconfirm they are between 0.1mV and 10mV.

Note)

- If R175 (L ch) or R176 (R ch) have already been cut off and idling current does not flow, reconnect R175 (1kΩ) or R176 (1kΩ).
- Q117 and Q118 are transistors for temperature correction. Apply silicone grease to the contact surface with the heat sink.

■ TEST MODE

CAUTION: Before setting to the TEST mode, write down the existing preset memory content of the Tuner in a table as shown below. (This is because setting to the TEST mode will cause the memory content to be as factory set, i.e., all the preset memory by the user will be erased.)

012~115 Normal
000~011 Abnormal

Cancel:

When the POWER is turned OFF, the TEST mode is cancelled.

PROTECTION FUNCTION

When the microprocessor detect an abnormal condition, the Power is turned off.

Vref is the AD reference Voltage. The microprocessor compares the monitored voltage relative to Vref = 255.

PS Error Detection

PS error detection begins 1 sec. after Power ON. If the monitored level is lower than 53/255 Vref or higher than 134/255 Vref (AD value), protection is activated.

Output DC Voltage Detection

DC voltage detection begins 4.4 sec. after Power ON. If the monitored level is lower than 12/255 Vref or higher than 115/255 Vref (AD value), protection is activated.

Over Current Detection

Over current detection begins immediately after Power ON. If the monitored level is High, protection is activated.
