

AV RECEIVER RX-V667/HTR-6063/ RX-A700 SERVICE MANUAL

RX-V667/HTR-6063/
RX-A700

IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel.

It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

■ TO SERVICE PERSONNEL

1. Critical Components Information

Components having special characteristics are marked Δ and must be replaced with parts having specifications equal to those originally installed.

2. Leakage Current Measurement (For 120V Models Only)

When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.

- Meter impedance should be equivalent to 1500 ohms shunted by 0.15 μ F.

- Leakage current must not exceed 0.5mA.
- Be sure to test for leakage with the AC plug in both polarities.

For U model "CAUTION"

"F3701: FOR CONTINUED PROTECTION AGAINST RISK OF FIRE, REPLACE ONLY WITH SAME TYPE 8A, 125V FUSE."

For C model CAUTION

F3701: REPLACE WITH SAME TYPE 8A, 125V FUSE.

ATTENTION

F3701: UTILISER UN FUSIBLE DE RECHANGE DE MÊME TYPE DE 8A, 125V.

WARNING: CHEMICAL CONTENT NOTICE!

This product contains chemicals known to the State of California to cause cancer, or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

About lead free solder

All of the P.C.B.s installed in this unit and solder joints are soldered using the lead free solder.

Among some types of lead free solder currently available, it is recommended to use one of the following types for the repair work.

- Sn + Ag + Cu (tin + silver + copper)
- Sn + Cu (tin + copper)
- Sn + Zn + Bi (tin + zinc + bismuth)

Caution:

As the melting point temperature of the lead free solder is about 30°C to 40°C (50°F to 70°F) higher than that of the lead solder, be sure to use a soldering iron suitable to each solder.

SERVICE PRECAUTIONS

Safety measures

- Some internal parts in this product contain high voltages and are dangerous. Be sure to take safety measures during servicing, such as wearing insulating gloves.
- Note that positions indicated below are dangerous even after the power is turned off because an electric charge remains and a high voltage continues to exist there. Before starting any repair work, perform discharge by connecting a discharge resistor (5k-ohms/10W) between terminals at following positions. The time required for discharging is about 30 seconds.

Refer to "PRINTED CIRCUIT BOARDS: VIDEO (2) P.C.B.".

DISASSEMBLY PROCEDURES

(Remove parts in the order as numbered.)

Disconnect the power cable from the AC outlet.

1. Removal of Top Cover

- Remove 4 screws (①) and 5 screws (②). (Fig. 1)
- Lift the rear of the top cover to remove it.

2. Removal of Front Panel Unit

- Remove 7 screws (③), and remove W4401. (Fig. 1)
- Remove CB8, CB458, CB472 and CB914. (Fig. 1)
- Unlock and remove CB333. (Fig. 1)
- Release 2 hooks, and remove the front panel unit. (Fig. 1)

Fig. 1

**3. Removal of DIGITAL (3) P.C.B.
(RX-A700 model only)**

- a. Remove 2 jack screws (④). (Fig. 3)
- b. Remove CB901 and remove the DIGITAL (3) P.C.B. (Fig. 2)

4. Removal of DIGITAL (1) P.C.B.

- a. Remove screw (⑤) and 6 screws (⑥). (Fig. 3)
- b. Remove 3 screws. (⑦). (Fig. 2)
- c. Remove CB34, CB73, CB904, CB913 and CB31 (B, G, F models). (Fig. 2)
- d. Unlock and remove CB906-907 and CB911. (Fig. 2)
- e. Remove the DIGITAL P.C.B. which is connected directly to the OPERATION (2) P.C.B. with board-to-board connectors. (Fig. 2)

5. Removal of AMP Unit

- a. Remove screw (⑧), 2 screws (⑨) and 4 screws (⑩). (Fig. 2)
- b. Remove 3 screws (⑪). (Fig. 3)
- c. Remove the amp unit. (Fig. 2)

Fig. 2

Fig. 3

When checking the P.C.B.s:

- Follow the procedure below to place the P.C.B.s (with rear panel) upright. (Fig. 5)
 - a. Remove the top cover. (Fig. 1)
 - b. Cut out a part of the DIGITAL (1) P.C.B. as shown in the figure below in order that screw (⑧) can be removed. (Fig. 4)
 - c. Remove screw (⑧), 2 screws (⑨) and 5 screws (⑩). (Fig. 2)
 - d. Remove 3 screws (⑩). (Fig. 3)
- Connect the ground points of the heatsink, rear panel and MAIN (1) P.C.B. (G101) to the chassis with a ground lead or the like. (Fig. 5)
- When connecting the flexible flat cable, be careful with polarity.
- Reconnect all cables (connectors) that have been disconnected.

■ UPDATING FIRMWARE

When the following parts are replaced, the firmware must be updated to the latest version.

DIGITAL P.C.B.

IC951 (TI (DSP) flash ROM) of DIGITAL P.C.B.

● Confirmation of firmware version and checksum

Before and after updating the firmware, check the firmware version and checksum by using the self-diagnostic function menu.

Start up the self-diagnostic function and select "S4. ROM VER/SUM" menu.

Using the sub-menu, have the firmware version and checksum displayed, and note them down.

(See "SELF-DIAGNOSTIC FUNCTION")

* When the firmware version is different from written one after updating, perform the updating procedure again from the beginning.

● Initializing the back-up IC (EEPROM: IC903 of the DIGITAL P.C.B.)

After updating the firmware, the back-up IC MUST be initialized by the following procedure to have proper memorization of the set up information (soundfield parameters, system memory and tuner presetting, etc.).

Start up the self-diagnostic function and select "S3. FACTORY PRESET" menu. (See "SELF-DIAGNOSTIC FUNCTION")

Select "PRESET RSRV", press the "MAIN ZONE ⏻"(power) key of this unit to turn off the power once and turn on the power again. Then the back-up IC is initialized.

● Required Tools

- BD, DVD or CD player (with DIGITAL OUTPUT (OPTICAL or COAXIAL) jack)
- Optical cable (when OPTICAL jack is used)
- Digital audio pin cable (when COAXIAL jack is used)

• Firmware CD

* Download the latest firmware from the specified download source and create the firmware CD.

● **Connection**

Connect this unit and BD/DVD/CD player as shown below. (Fig. 1)

Example of OPTICAL jack

Example of COAXIAL jack

Fig. 1

● **Operation Procedures**

1. While pressing the "TUNING >>" key of this unit, connect the power cable of this unit to the AC outlet. (Fig. 2)
The FIRMWARE UPDATE mode is activated and "CDDA Upgrader" is displayed. (Fig. 2)

Display

Fig. 2

2. Play the firmware CD on the BD/DVD/CD player. Writing of the firmware starts automatically. (Fig. 3)
3. When writing of the firmware is completed, "Update Success", "Please..." and "Power off!!" are displayed repeatedly. (Fig. 3)

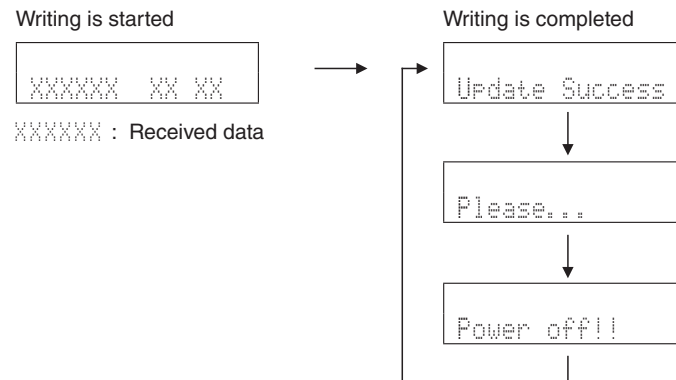

Fig. 3

- * If the display remains unchanged for more than 10 seconds after starting the firmware CD play procedure, perform the firmware CD play procedure again from the beginning.
If "FILE CORRUPTED" is displayed after "Address:XXXXXX", make sure that the written data is not corrupted and perform Steps 1 to 3 of "Operation Procedures" again.
If "Upgrade Failed" is displayed, perform "operation procedures" again from the beginning.

4. Press the "MAIN ZONE ⏻" (power) key of this unit to turn off the power.
5. Eject the firmware CD from the BD/DVD/CD player.
6. Start up the self-diagnostic function and check that the firmware version and checksum are the same as written ones. (See "Confirmation of firmware version and checksum")

■ SELF-DIAGNOSTIC FUNCTION

This unit has self-diagnostic functions that are intended for inspection, measurement and location of faulty point.

There are 25 main menu items, each of which has sub-menu items.

Listed in the table below are main menu items and sub-menu items.

Note that not all menu items listed will apply to the models covered in this service manual.

● Starting Self-Diagnostic Function

While pressing the “TONE CONTROL” and “INFO” keys of this unit as shown in the figure below, press the “MAIN ZONE ⏻” (power) key of this unit to turn on the power.

The self-diagnostic function mode is activated.

● Starting Self-Diagnostic Function in the protection cancel mode

If the protection function works and causes hindrance to trouble shoot, cancel the protection function as described below, and it will be possible to enter the self-diagnostic function mode.

(The protection functions other than the excess current detect function will be disabled.)

While pressing the “TONE CONTROL” and “INFO” keys as shown in the figure above, press the “MAIN ZONE ⏻” (power) key to turn on the power and keep pressing those 2 keys for 3 seconds or longer.

The self-diagnostic function mode is activated with the protection functions disabled.

In this mode, the “SLEEP” segment of the FL display of this unit flashes to indicate that the mode is self-diagnostic function mode with the protection functions disabled.

CAUTION!

Using this product with the protection function disabled may cause further damage to this unit. Use special care for this point when using this mode.

● Canceling Self-Diagnostic Function

1. Before canceling self-diagnostic function, execute setting for FACTORY PRESET of main menu No. S3. (Memory initialization inhibited or Memory initialized).
 - * In order to keep the user memory preserved, be sure to select PRESET INHIBIT (Memory initialization inhibited).
2. Press the “MAIN ZONE ⏻” (power) key of this unit to turn off the power.

● Display provided when Self-Diagnostic Function started

The display is as described below depending on the situation the last time the power to this unit is turned off.

1. When the power is turned off by usual operation:

The FL display of this unit displays "NO PROTECT" then the main menu (sub-menu "A1-1. DSP MARGIN" of main menu No. A1 DSP AUDIO) a few seconds later.

2. When the protection function worked to turn off the power:

The FL display of this unit displays the data of protection function which worked at that time then the main menu (sub-menu "A1-1. DSP MARGIN" of main menu No. A1 DSP AUDIO) a few seconds later.

Note: At that time if you reactivate the self-diagnostic function after turning off the power once by pressing the "MAIN ZONE ϕ " (power) key, "NO PROTECT" will be displayed because that situation is equal to "1. When the power is turned off by usual operation:" described above.

However the protection function history is stored in a back-up IC with a backup. For details, refer to main menu P2 PROTECTION HISTORY."

2-1. When there is a history of protection function due to excess current.

The diagram shows a rectangular box containing the text 'I PROTECT'.

Cause: An excessive current flowed through the power amplifier.

Supplementary information: As current of the power amplifier is detected, the abnormal channel can be identified by checking the current detect transistor.

Turning on the power without correcting the abnormality will cause the protection function to work immediately and the power supply will instantly be shut off.

Notes)

- Applying the power to this unit without correcting the abnormality can be dangerous and cause additional circuit damage. To avoid this, if "I PROTECT" protection function works 1 time, the power will not turn on even when the "MAIN ZONE ϕ " (power) key is pressed. In order to turn on the power again, start up the self-diagnostic function.
- The output transistors in each amplifier channel should be checked for damage before applying power to this unit.
- Amplifier current should be monitored by measuring DC voltage across the emitter resistors for each channel.

2-2. When the protection function worked due to abnormal DC output.

Cause: DC output of the power amplifier is abnormal.

Supplementary information: The protection function worked due to a DC voltage appearing at the speaker terminal. A cause could be a defect in the amplifier.

Turning on the power without correcting the abnormality will cause the protection function to work in 3 seconds and the power supply will be shut off.

2-3. When the protection function worked due to abnormal voltage in the power supply section.

Cause: The voltage in the power supply section is abnormal.

Supplementary information: The protection function worked due to a defect or overload in the power supply.

Turning on the power without correcting the abnormality will cause the protection function to work in 1 seconds and the power supply will be shut off.

Notes)

- Applying the power to this unit without correcting the abnormality can be dangerous and cause additional circuit damage. To avoid this, if “PS” and “DC” protection function works 3 times consecutively, the power will not turn on even when the “MAIN ZONE ⏻” (power) key is pressed. In order to turn on the power again, start up the self-diagnostic function.
- The output transistors in each amplifier channel should be checked for damage before applying power to this unit.
- Amplifier current should be monitored by measuring DC voltage across the emitter resistors for each channel.

2-4. When the protection function worked due to excessive heatsink temperature.

TMP PRT:xxxL

AD conversion value when the protection function is working

Cause: The temperature of the heatsink is excessive.

Supplementary information: The protection function worked due to the temperature limit being exceeded. Causes could be poor ventilation or a defect related to the thermal sensor.

Turning on the power without correcting the abnormality will cause the protection function to work in 1 seconds and the power supply will be shut off.

● History of protection function

When the protection function has worked, its history is stored in memory with a backup.

Even if no abnormality is noted while servicing the unit, an abnormality which has occurred previously can be defined as long as the backup data has been stored.

For details, refer to main menu P2 PROTECTION HISTORY.

● Operation procedure of Main menu and Sub-menu

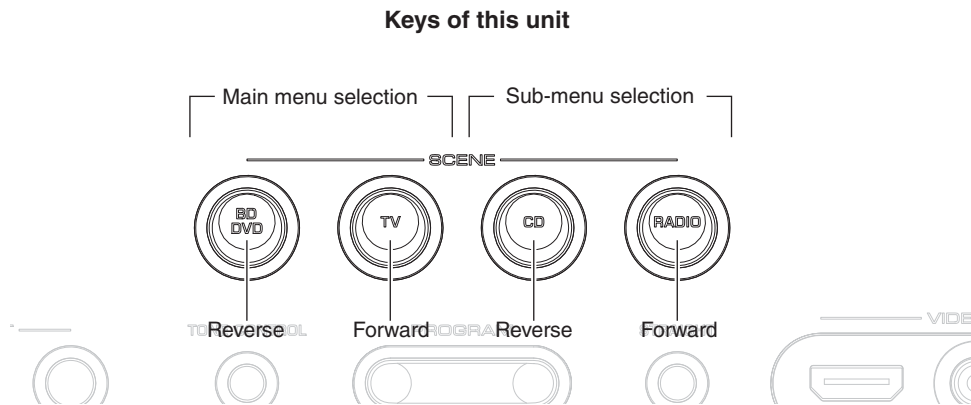

There are 25 main menu items, each of having sub-menu items.

Main menu selection

Select the menu using “SCENE TV” (forward) and “SCENE BD/DVD” (reverse) keys.

Sub-menu selection

Select the sub-menu using “SCENE RADIO” (forward) and “SCENE CD” (reverse) keys.

● Functions in Self-Diagnostic Function mode

In addition to the self-diagnostic function menu items, functions as listed below are available.

- Power ON/OFF
- Master volume
- Muting
- Input selection
- * Functions related to the tuner and the set menu are not available.

● Initial settings used to start Self-Diagnostic Function

The following initial settings are used when starting self-diagnostic function.

When self-diagnostic function is canceled, these settings are restored to those before starting self-diagnostic function.

- Master volume: -20 dB / Zone volume: +2.5dB
- Input: HDMI1 / Zone: AUDIO1
- Main menu: A1-1. DSP MARGIN
- Speaker setting: LARGE, Bass out to SWFR (All channels)
- HDMI Control: Off
- Zone: On

● Details of Self-Diagnostic Function menu

A1. DSP AUDIO

This menu is used to check audio signal route via DSP.

A1-1. DSP MARGIN

The audio signal is output including the head margin via DSP.

Head margin

Front L/R, Center, Surround L/R, Surround Back L/R Presence L/R: +12 dB

Subwoofer: +18 dB

* When input source is stereo, signal is assigned as below.

A3. HDMI AUDIO

This menu is used to check the route of audio signal input to HDMI IN/OUT.

* Before check using sub-menu A3-3, be sure to connect a TV monitor equipped with Audio Return Channel function to this unit.

A4. SPEAKERS SET

This menu is used to check the speaker output.

A5. MULTI CHANNEL INPUT

This menu is used to check the route of audio signal input to MULTI CHANNEL INPUT.

A5-1. 8 CHANNEL INPUT 8 ohms

The audio signal input to MULTI CHANNEL INPUT is output with the speaker impedance "8 ohms" setting.

```
A5-1
8ch Input 8ohm
```

A5-2. 8 CHANNEL INPUT 6 ohms

The audio signal input to MULTI CHANNEL INPUT is output with the speaker impedance "6 ohms" setting.

```
A5-2

```

A6. MIC CHECK

A6-1. MIC ROUTE CHECK

The signals input through the YPAO microphone are output to only FRONT L channel via A/D-D/A.

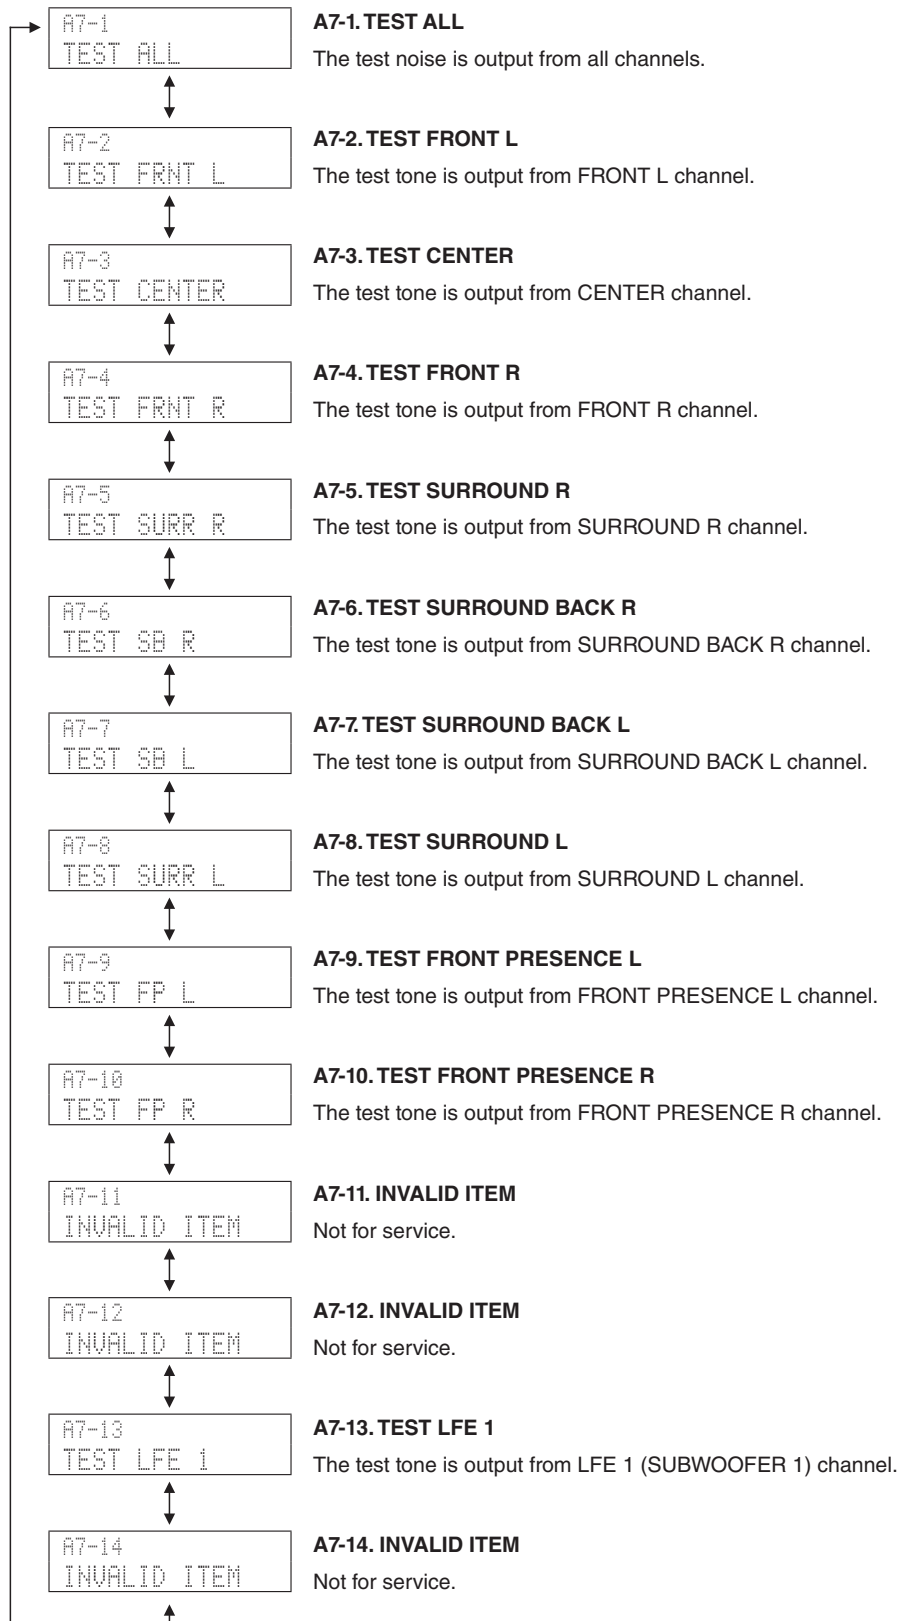

```
A6-1
MIC ROUTE
```

A7. MANUAL TEST

The built-in noise generator of DSP outputs the test noise or test tone through the channels specified by using the sub-menu.

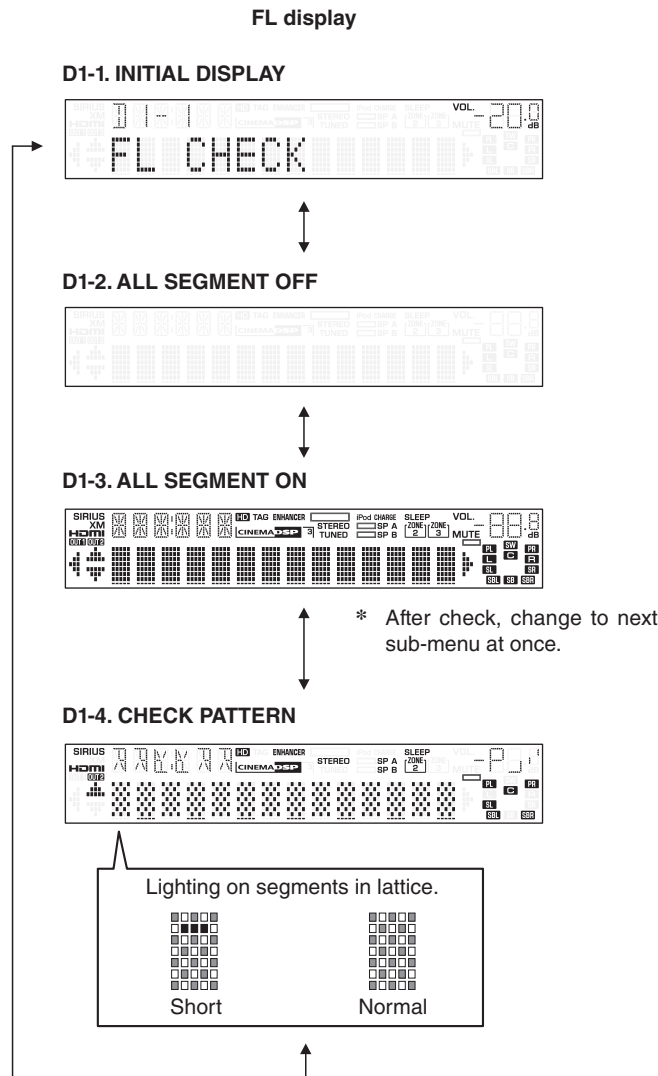

The noise frequency for LFE is 30 to 80 Hz. Other than that, the noise frequency is 500 to 2 kHz.

The tone frequency for LFE is 50 Hz sine wave. Other than that, the tone frequency is 1kHz sine wave.

D1. FL CHECK

This menu is used to check the FL display.

Segment conditions of the FL driver and the FL tube are checked by turning ON and OFF all segments.

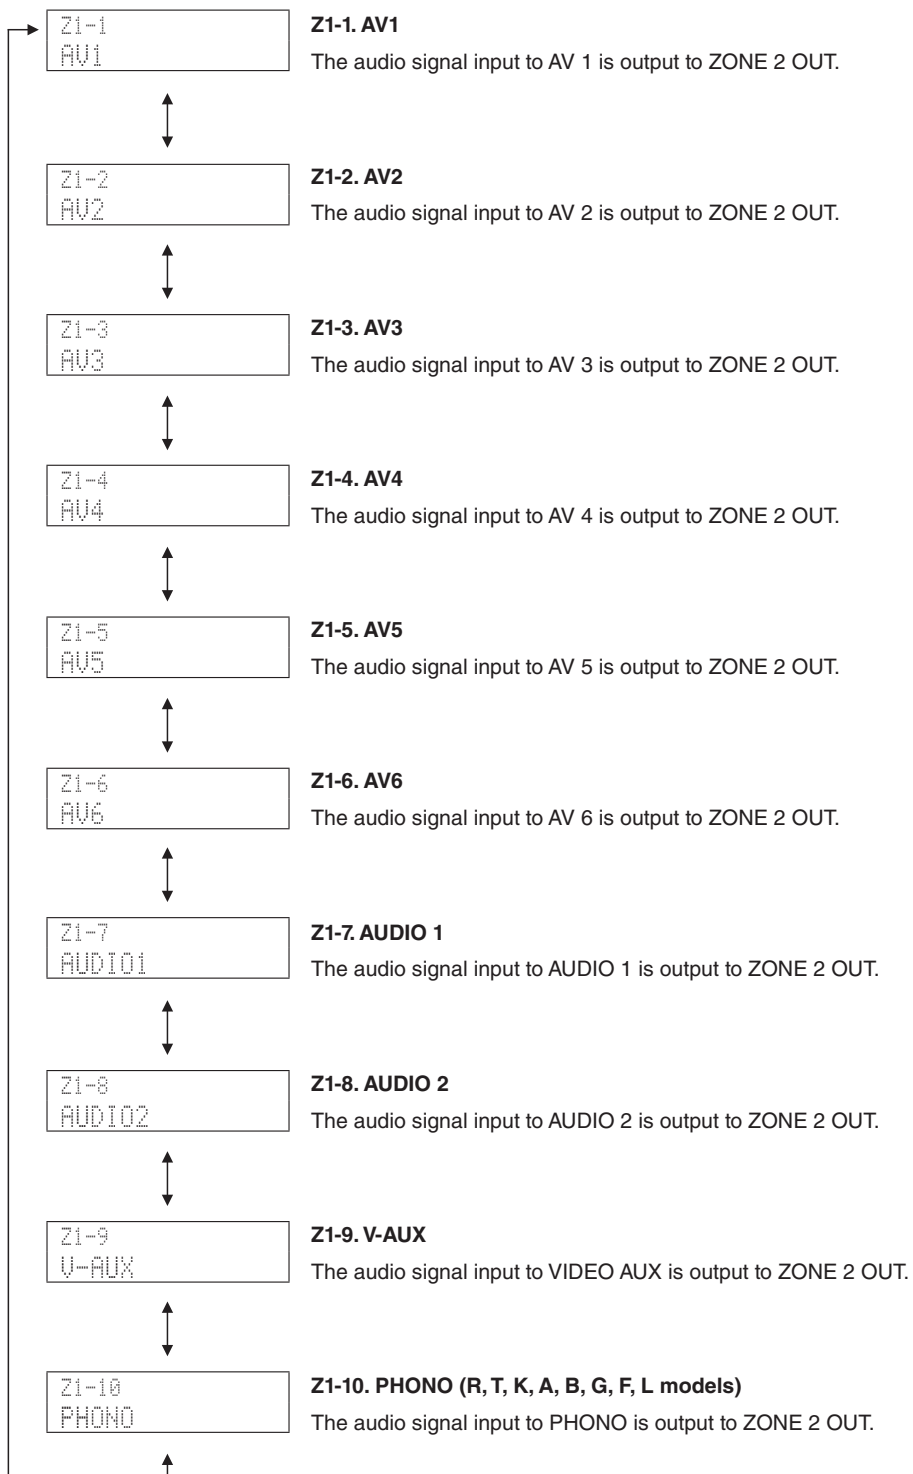

Next, the operation of the FL driver is checked by using the dimmer control.

Then a short between segments next to each other is checked by turning ON and OFF all segments alternately (in lattice).

(In the above example, the segments in the second row from the top are shorted.)

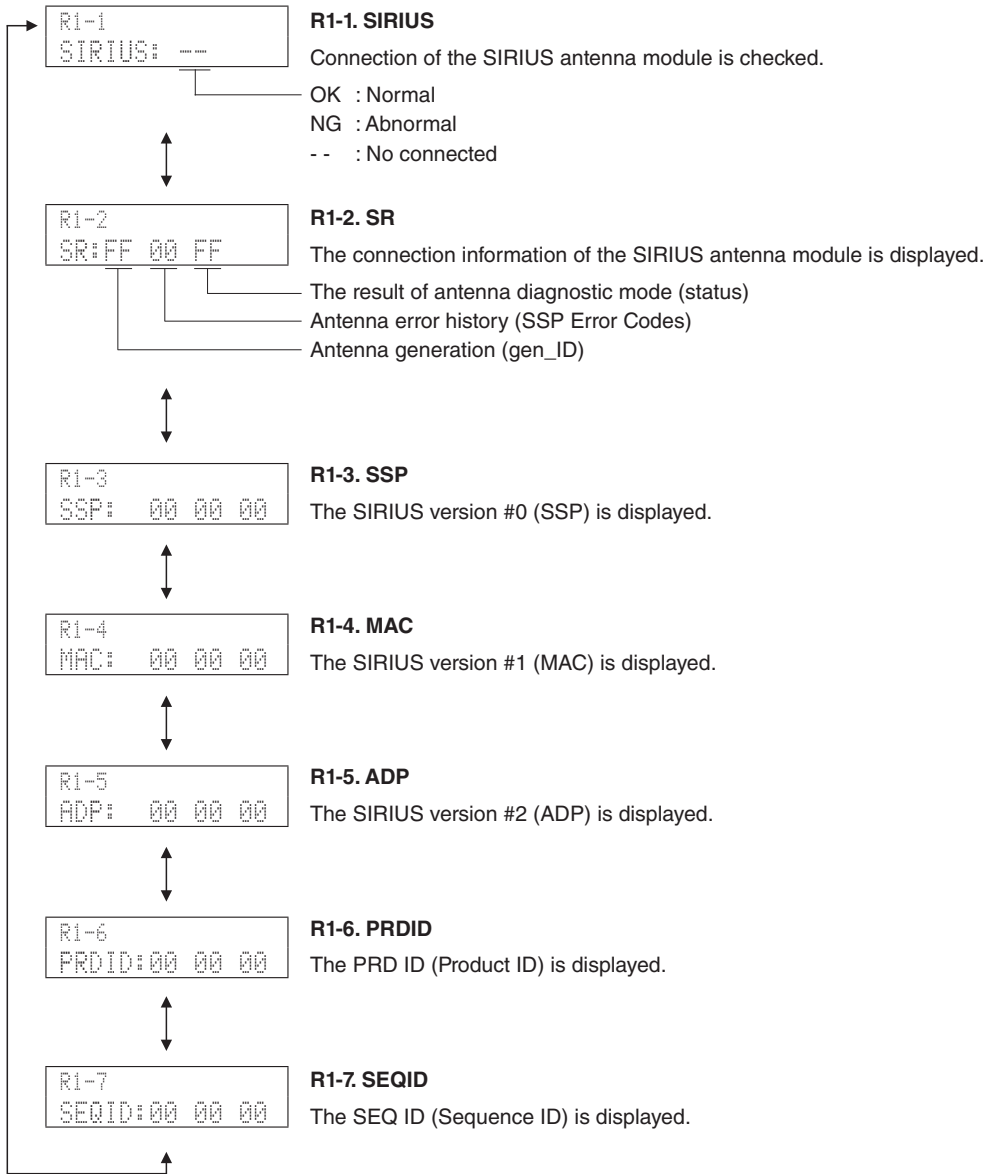

Z1. ZONE TEST

This menu is used to check audio signal route to ZONE 2 OUT.

R1. SIRIUS (U model)

The SIRIUS information are displayed.

U1. DOCK

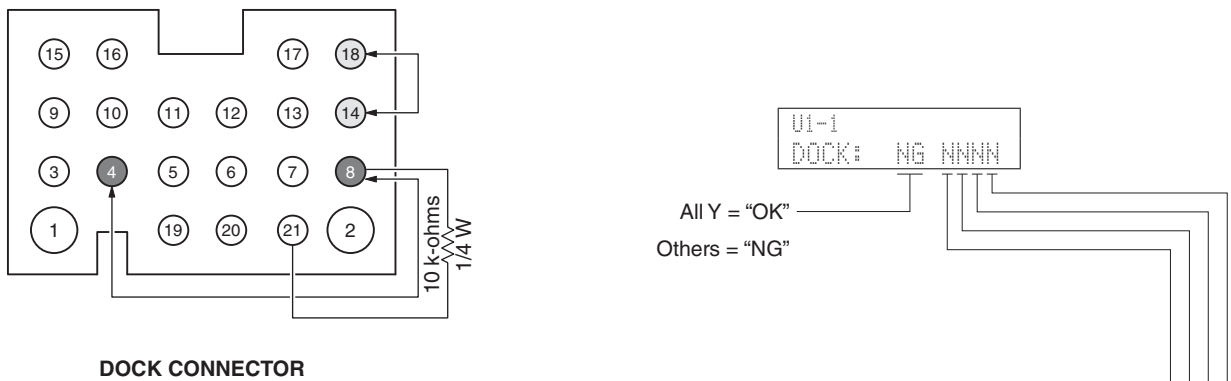

This menu is used to check the DOCK connector without the iPod itself.

With the power to this unit turned off, short between pins No. 14 (TX) and No. 18 (RX), between pins No. 4 (iPDET) and No. 8 (DGND). Also, connect a 10 k-ohms, 1/4 W resistor between pins NO. 21 (DKID) and No. 8 (DGND). (Make sure that the power is turned off when shorting pins.)

Start up the self-diagnostic function and select this menu.

The check result is displayed according to the following display specifications.

Note) Be sure to return the shorted pins to their original condition after executing this test.

Check item	Result		Display
UART loop back test	OK		Y
	NG		N
DOCK_AP (iPod accessory power) detection	-	High = YES	Y
		Low = No	N
DOCK_PON (iPod installation to DOCK) detection	IC904 pin No. 9	Low = installed	Y
		High = not installed	N
DOCK_N_DET (DOCK ID) detection	IC908 pin No. 34	10 k-ohms, 1/4 W pull down	Y
		Other	N

**C1. DIGITAL P.C.B. CHECK**

This menu is used to check the communication and bus line connection between devices on the DIGITAL P.C.B..

C1-1. ALL

The synthetic judgment result of sub-menu C1-2. to C1-9 is displayed.

- OK : No error detected
- NG : An error is detected

```

C1-1
ALL:OK

C1-2
BUS_FLASH:OK
  
```

C1-3. BUS FPGA

Communication and bus line connection between microprocessor (IC908) and FPGA (IC64) are checked.

- OK : No error detected
- NG : An error is detected

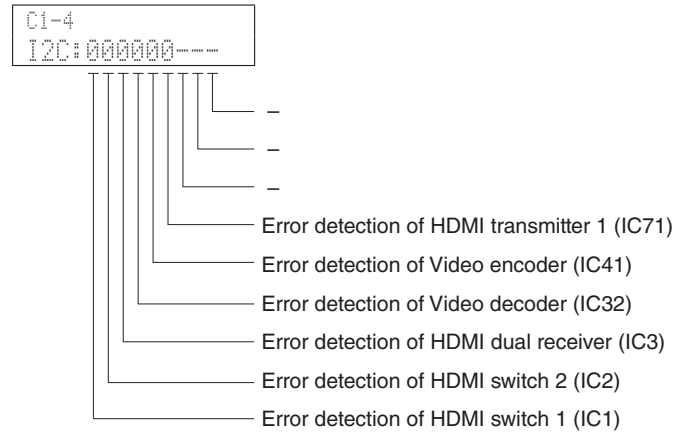

```

C1-3
BUS_FPGA:OK
  
```

C1-4. I2C

The I2C (Inter integrated route) bus line connection is checked.

- 0 : No error detected
- 1 : An error is detected

**C1-5. FPGA RAM**

Reading/writing SDRAM (IC62) are checked.

- OK : No error detected
- NG : An error is detected

**C1-6. BUS DIR**

Communication and bus line connection between microprocessor (IC908) and DIR (IC42) are checked.

- OK : No error detected
- NG : An error is detected

**C1-7. BUS DSP1**

Communication and bus line connection between microprocessor (IC908) and DSP1 (IC945) are checked.

- OK : No error detected
- NG : An error is detected

C1-8. EEPROM

The Read check of EEPROM (IC903) are executed.

- OK : No error detected
- NG : An error is detected

```
C1-8

V1-4. MUTE CHECK

The video signal is muted.

MUTE signals "VID_N_MMT" (8 pin), "CPNT_N_VMT" (12 pin) and "VID_N_RMT" (17 pin) are output from the IC of the VIDEO P.C.B..

V1-5. TEST PATTERN

The test pattern is output from video encoder (IC41 of the DIGITAL P.C.B.).

Analog bypass

Test pattern

V1-6. VIDEO INFORMATION

The information of input analog video signals is displayed.

V2. DIGITAL VIDEO CHECK

This menu is used to check the digital video signal route.

Before checks using sub-menu V2-1 and V2-2, connect between HDMI OUT and HDMI IN terminals of this unit with an HDMI cable in advance.

V2-1. LOOPBACK TEST 1

The video signal route as shown below is checked automatically and result (OK or NG) is displayed.

V2-1
TEST1:OK

V2-2. LOOPBACK TEST 2

The video signal route as shown below is checked automatically and result (OK or NG) is displayed.

V2-2
TEST2:OK

V2-3. LOOPBACK TEST 3

Not for service.

V2-4. HDMI REPEAT

* Before check using sub-menu V2-4, disconnect the HDMI cable connected between HDMI OUT and HDMI IN terminals of this unit.

The video/audio signals input to HDMI IN terminal are output to HDMI OUT terminal.

V2-5. DIGITAL CVBS

The video (CVBS) signal is converted and output as shown below.

V2-6. DIGITAL Y/C (B, G, F models)

The s-video (Y, C) signal is converted and output as shown below.

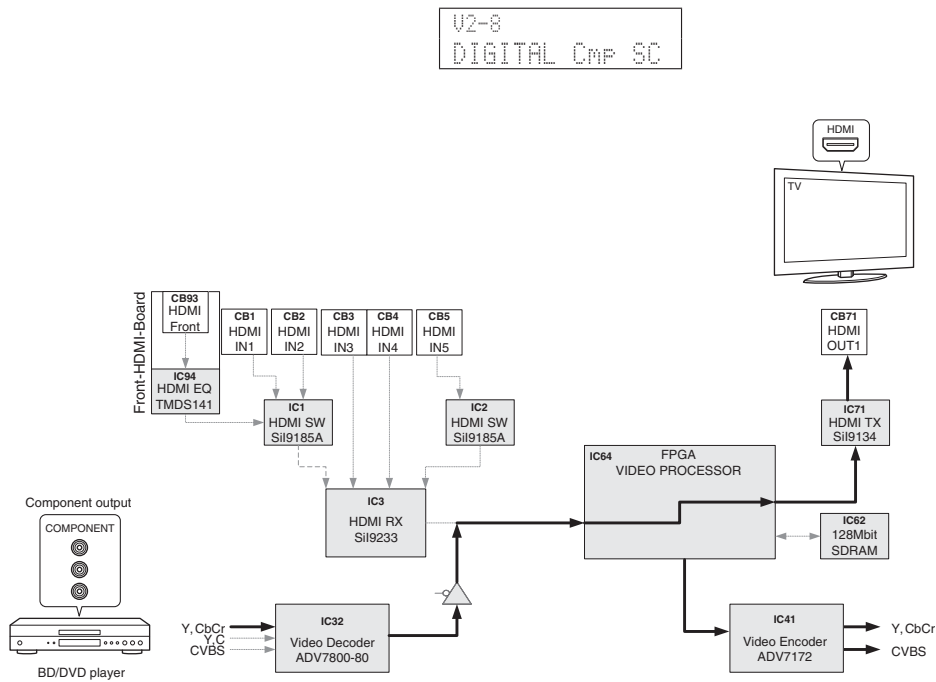

V2-7. DIGITAL COMPONENT

The component video (Y, Cb, Cr) signal is converted and output as shown below.

V2-8. DIGITAL COMPONENT SC

The component video (Y, Cb, Cr) signal is converted and output as shown below.
HDMI video output up-scaling: 480i/p, 576i/p => 1080p

V2-9. GUI-VIDEO OUT

The GUI from FPGA (IC64 of the DIGITAL P.C.B.) is output.

P1. SYSTEM MONITOR

This menu is used to display the A/D conversion value of the microprocessor which detects panel keys of this unit and protection functions by using the sub-menu.

When "P1-7. KEY1/KEY2" sub-menu is selected, keys become non-operable due to detection of the values of all keys. However, it is possible to advance to the next sub-menu by pressing the "SCENE RADIO" (forward) or "SCENE CD" (reverse) key of the remote control.

* Numeric values in the figure are given as reference only.

P1-1. DC

DC: Power amplifier DC (DC voltage) output is detected.

The voltage at 1 pin (DC_PRT) of IC902 is displayed.

Normal value: 32 to 74 (Reference voltage: 3.3 V=255)

* If DC becomes out of the normal value range, the protection function works to turn off the power.

P1-2. PS1/PS2

Power supply voltage protection detection

The voltage at 2 pin (PS1_PRT)/1 pin (PS2_PRT) of IC902 are displayed.

Voltage detects:

PS1: ACBH, ACBL, AC_12, AC-5, ± 12 , ± 7 , +3.3D, +1.8D

PS2: +5I and -5V

Normal value

PS1: 38 to 141

PS2: 34 to 138 (Normal), 120 to 224 (PURE DIRECT mode)
(Reference voltage: 3.3 V=255)

* If PS1 or PS2 becomes out of the normal value range, the protection function works to turn off the power.

```
P1-2
PS: 90 / 88
```

P1-3. TM

TM: Temperature of the heatsink is detected.

The voltage at 2 pin (TMH1) of IC902 is displayed.

Normal value: 42 to 255 (U, R, T, K, A, B, G, F, L models)
116 to 255 (C model)

(Reference voltage: 3.3 V=255)

* If TM becomes out of the normal value range, the protection function works to turn off the power.

```
P1-3
TM: 111
```

P1-4. OUTPUT LEVEL

Output level of speaker output is detected.

The voltage at 4 pin (AMP_OLV) of IC901 is displayed.

(Reference voltage: 3.3 V=255)

```
P1-4
OUTLVL: 255
```

P1-5. LIMITER CONTROL

Power limiter control is detected.

The voltage at 4 pin (AMP_OLV) of IC901 is displayed.

P1-7. KEY1/KEY2

Panel key of this unit is detected.

When the A/D conversion value of the panel key becomes out of the specified range, normal operation will not be available.

In that case, check the constant of voltage dividing resistor, solder condition, etc. Refer to table.

* When "P1-7. KEY1/KEY2" sub-menu is selected, keys become non-operable due to detection of the values of all keys. However, it is possible to advance to the next sub-menu by pressing the "SCENE RADIO" (forward) or "SCENE CD" (reverse) key of the remote control.

P2. PROTECTION HISTORY

This menu is used to display the history of protection function.

All history of protection function will be erased by pressing the "STRAIGHT" key.

* Numeric values in the figure are given as reference only.

S1. F/W UPDATE

Not for service.

S2. SET INFORMATION

The model name and destination values are displayed.

S2-1. MODEL

The model name of this unit is displayed.

Model name	RX-V667	RX-A700	HTR-6063
A/D conversion value (3.3 V=255)	0-10	11-33	34-54

S2-2. DESTINATION

The destination of this unit is displayed.

Destination	U	C	R	T	K	A	B, G, F	L
A/D conversion value (3.3 V=255)	13-40	41-67	68-92	93-115	116-140	141-182	183-221	222-244

S2-3. DEBAG

Not for service.

S3. FACTORY PRESET

This menu is used to reserve/inhibit initialization of the back-up IC (EEPROM: IC903 of the DIGITAL P.C.B.).

S3-1. PRESET INHIBIT (Initialization inhibited)

Initialization of the back-up IC is not executed. Select this sub-menu to protect the values set by the user.

S3-2. PRESET RESERVED (Initialization reserved)

Initialization of the back-up IC is reserved. (Actual initialization is executed the next time the power is turned on.) To reset to the original factory settings or to reset the backup IC, select this sub-menu and press the "MAIN ZONE ⏻"(power) key to turn off the power. Any protection history also will be initialized at the same time.

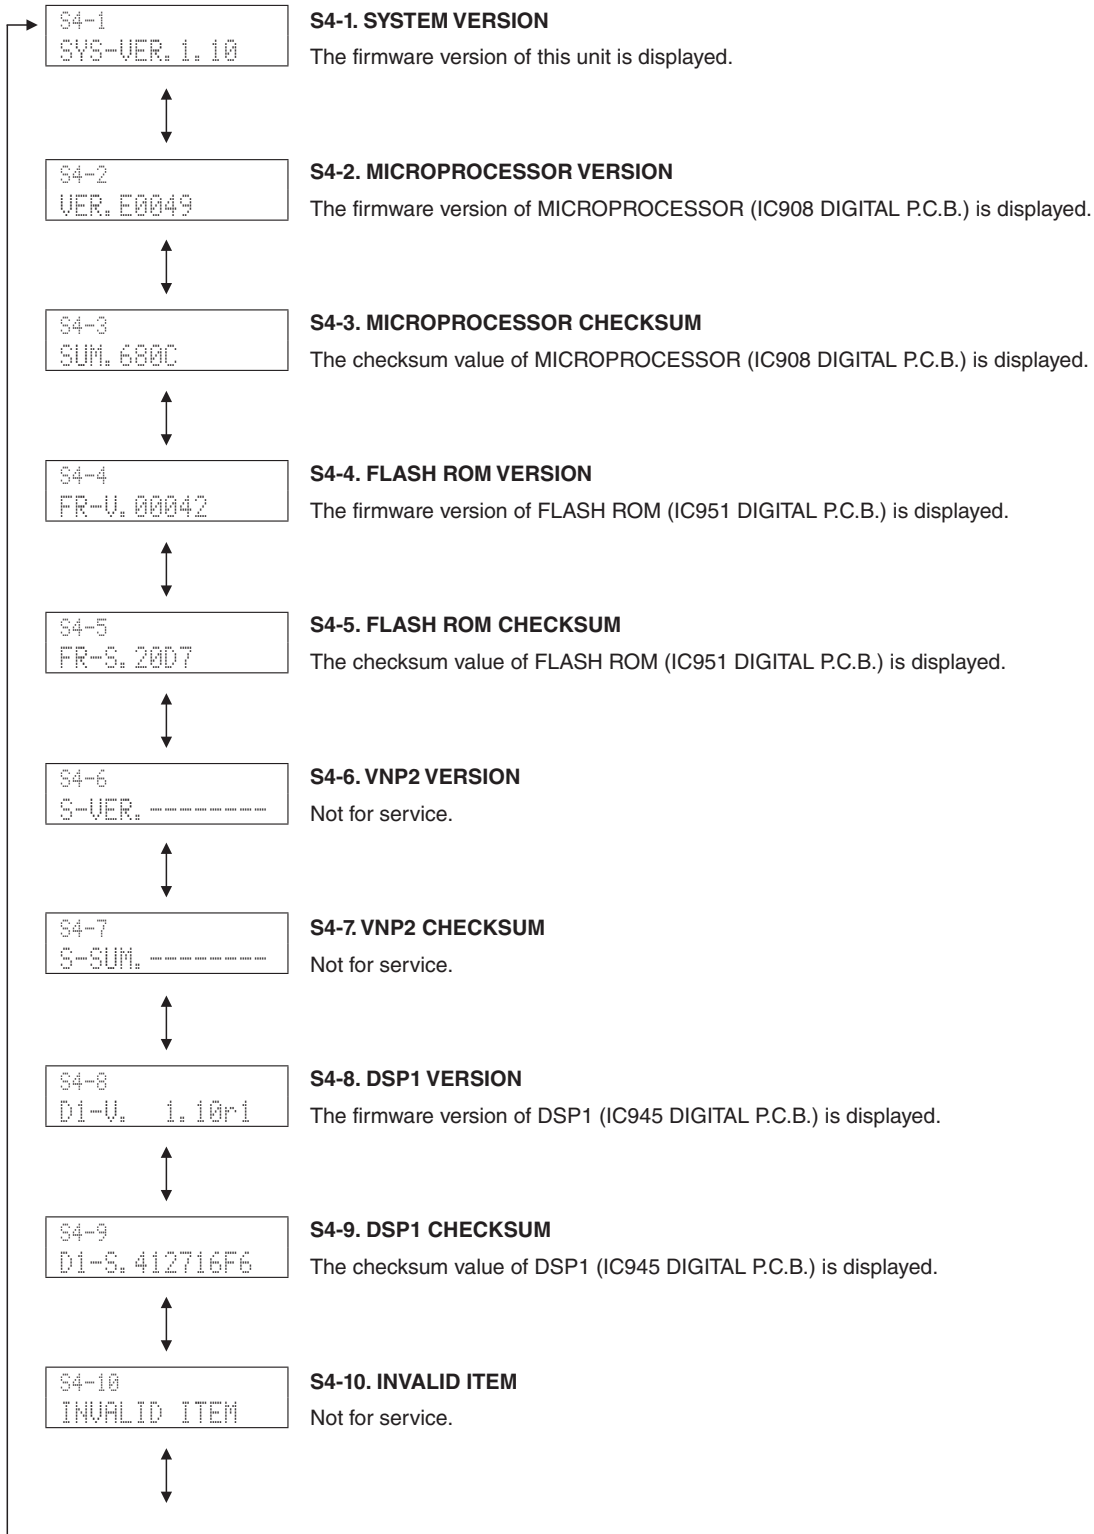

CAUTION: Before setting to the PRESET RESERVED, write down the existing preset memory content of the tuner. (This is because setting to the PRESET RESERVED will cause the user memory content to be erased.)

S4. ROM VERSION/CHECKSUM

The firmware version and checksum values are displayed.

The checksum is obtained by adding the data at every 8-bit and expressing the result as a 4-figure hexadecimal notation.

* Numeric values in the figure are given as reference only.

**S5. INVALID ITEM**

Not for service.

■ CONFIRMATION OF IDLING CURRENT OF AMP UNIT

- Right after power is turned on, confirm that the voltage across the terminals of R1152 (SURROUND BACK Rch), R1154 (SURROUND Rch), R1150 (FRONT Rch), R1148 (CENTER), R1149 (FRONT Lch), R1153 (SURROUND Lch), R1151 (SURROUND BACK Lch) are between 0.1 mV and 10.0 mV.
- If it exceeds 10.0 mV, open (cut off) R1090 (SURROUND BACK Rch), R1092 (SURROUND Rch), R1088 (FRONT Rch), R1086 (CENTER), R1087 (FRONT Lch), R1091 (SURROUND Lch), R1089 (SURROUND BACK Lch) and reconfirm the voltage.

Attention

If the measured voltage exceeds 10.0 mV after an amplifier repair, first check for a defective component before cutting the bias resistor.

- Confirm that the voltage is 0.2 mV to 15.0 mV after 60 minutes.

Notes)

Safety measures

- Some internal parts in this product contain high voltages and are dangerous. Be sure to take safety measures during servicing, such as wearing insulating gloves.
- Note that positions indicated below are dangerous even after the power is turned off because an electric charge remains and a high voltage continues to exist there. Before starting any repair work, perform discharge by connecting a discharge resistor (5k-ohms/10W) between terminals at following positions. The time required for discharging is about 30 seconds.

Notes Safety measures Some internal parts in this product contain high voltages and are dangerous. Be sure to take safety measures during servicing, such as wearing insulating gloves. Note that positions indicated below are dangerous even after the power is turned off because an electric charge remains and a high voltage continues to exist there. Before starting any repair work, perform discharge by connecting a discharge resistor (5k-ohms/10W) between terminals at following positions. The time required for discharging is about 30 seconds. ■ ADVANCED SETUP

- U model

The Advanced Setup menu can be used for unit initialization and other useful extended functions. The Advanced Setup menu can be operated as follows.

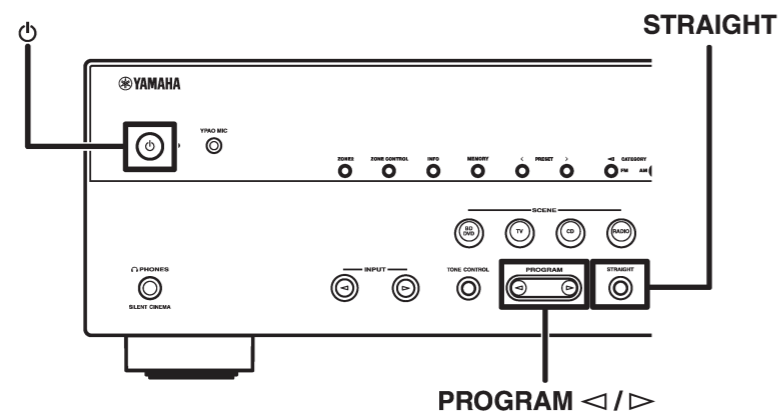

Displaying/Setting the Advanced Setup menu

1 Switch this unit to the standby mode.

2 Press  while pressing and holding **STRAIGHT** on the front panel.

Release **STRAIGHT** when “ADVANCED SETUP” is displayed on the front panel display.

After approximately a few seconds, the top menu items are displayed.

3 Use **PROGRAM** </> to select the item to be set from the following items.

In the Advanced Setup menu, you can set the following settings.

SP IMP.	Sets the impedance of speakers.
REMOTE ID	Changes the remote control ID of a receiver.
SR PIN	Resets the parental lock code for the SIRIUS Satellite Radio tuner.
TV FORMAT	Specifies the TV's color encoding format.
MON.CHK	Removes the up-scaling limitation on HDMI video output.
INIT	Initializes various settings for this unit.

4 Press **STRAIGHT** repeatedly to select the value you want to change.

5 Switch this unit to the standby mode, and then switch it on again.

The settings become effective and the unit is powered on. If initialization is selected, it will be performed when the unit is powered on again.

Setting the impedance of speakers

SP IMP. -8ΩMIN

Changes the unit settings depending on the impedance of the speakers connected.  1

6ΩMIN	Select the impedance when 6Ω speakers are connected.
8ΩMIN (Default)	Select the impedance when speakers above 8Ω are connected.

 1 : For detailed procedures of speaker impedance settings, refer to “Changing speaker impedance”.

- 13 Numeric keys
- 15 CODE SET
- 17 SOURCE/RECEIVER

Avoiding crossing remote control signals when using multiple Yamaha receivers

The remote control of the unit can only receive signals from a receiver which has an identical ID (remote control ID). When using multiple Yamaha AV receivers, you can set each remote control with a unique remote control ID for its corresponding receiver.

On the contrary, if you are setting the same remote control ID for all receivers, you can use one remote control to operate 2 receivers.

ID1 (Default)	Receives the remote control signals set in ID1.
ID2	Receives the remote control signals set in ID2.

ID1 is set for both remote control and receiver by default. To avoid crossing remote control, change the remote control ID for both remote control and receiver.

Resetting the SIRIUS Satellite Radio™ parental lock code

Reset the SIRIUS Satellite Radio parental lock code to the factory default setting.

RESET	Resets the code to the factory default setting.
CANCEL (Default)	Cancels resetting of the parental lock code.

■ To change the remote control ID

Perform each of the following steps within 1 minute. Settings will be automatically stopped if more than 1 minute passes since the last operation. To reset, repeat from step 1.

- 1 Press **15**CODE SET on the remote control using a pointed object such as the tip of a ballpoint pen.
- 2 Press **17**SOURCE/RECEIVER on the remote control.
- 3 Enter the desired remote control ID code.

To switch to ID1:

Enter “5019” using **13**Numeric keys.

To switch to ID2:

Enter “5020” using **13**Numeric keys.

Once the remote control code is registered successfully **17**SOURCE/RECEIVER will blink twice.

Registration successful: blinks twice
Registration failed: blinks 6 times

- If setup fails, repeat from step 1.
- Returns to ID1 after the remote control code is initialized.

Changing TV format

TV FORMAT-NTSC

Change the color encoding format to PAL or NTSC (default), to match the format used by the TV connected via the HDMI OUT or VIDEO (MONITOR OUT) jack.

Removing HDMI video output up-scaling limits

MON. CHK - YES

Removes the up-scaling limitation on video resolution when this unit and a TV are connected via HDMI jacks.

If a resolution supported by the monitor cannot be detected when configuring the up-scaling settings, this setting will remove the output limitation.

YES (Default)	Video output signals of a resolution not supported by the TV will not be transmitted.
SKIP	This unit ignores the TV's support capability and transmits input video signals to the TV.

Initializing various settings for this unit

INIT- CANCEL

Initializes various settings stored in this unit and sets it back to default.

Select the items to be initialized from the following.

DSP PARAM	Initializes all parameters for the sound programs.
VIDEO	Resets video conversion settings (resolution/aspect ratio) in the Setup menu.
ALL	Resets this unit to default factory settings.
CANCEL (Default)	Does not initialize.

- C, R, T, K, A, B, G, f, L models

The Advanced Setup menu can be used for unit initialization and other useful extended functions. The Advanced Setup menu can be operated as follows.

Displaying/Setting the Advanced Setup menu

1 Switch this unit to the standby mode.

2 Press  while pressing and holding **STRAIGHT** on the front panel.

Release **STRAIGHT** when “ADVANCED SETUP” is displayed on the front panel display.

After approximately a few seconds, the top menu items are displayed.

3 Use **PROGRAM**   to select the item to be set from the following items.

In the Advanced Setup menu, you can set the following settings.

SP IMP.	Sets the impedance of speakers.
REMOTE ID	Changes the remote control ID of a receiver.
TV FORMAT	Specifies the TV's color encoding format.
MON.CHK	Removes the up-scaling limitation on HDMI video output.
TU  1	Selects one of the following FM/AM frequency steps.
INIT	Initializes various settings for this unit.

4 Press **STRAIGHT** repeatedly to select the value you want to change.

5 Switch this unit to the standby mode, and then switch it on again.

The settings become effective and the unit is powered on. If initialization is selected, it will be performed when the unit is powered on again.

Setting the impedance of speakers

Changes the unit settings depending on the impedance of the speakers connected.  2

6ΩMIN	Select the impedance when 6Ω speakers are connected.
8ΩMIN (Default)	Select the impedance when speakers above 8Ω are connected.

 1 : Asia and General models only.

 2 : For detailed procedures of speaker impedance settings, refer to “Changing speaker impedance”.

ID2	Receives the remote control signals set in ID2.

ID1 is set for both remote control and receiver by default. To avoid crossing remote control, change the remote control ID for both remote control and receiver.

To change the remote control ID

Perform each of the following steps within 1 minute. Settings will be automatically stopped if more than 1 minute passes since the last operation. To reset, repeat from step 1.

- 1 Press 15 CODE SET on the remote control using a pointed object such as the tip of a ballpoint pen.
- 2 Press 17 SOURCE/RECEIVER on the remote control.
- 3 Enter the desired remote control ID code.

To switch to ID1:
Enter "5019" using 13 Numeric keys.

To switch to ID2:
Enter "5020" using 13 Numeric keys.

Once the remote control code is registered successfully 17 SOURCE/RECEIVER will blink twice.

Registration successful: blinks twice
Registration failed: blinks 6 times

- If setup fails, repeat from step 1.
- Returns to ID1 after the remote control code is initialized.

Changing TV format

TV FORMAT-NTSC

Change the color encoding format of OSD to PAL or NTSC (default), to match the format used by the TV connected via the HDMI OUT or VIDEO (MONITOR OUT) jack.

Removing HDMI video output up-scaling limits

MON. CHK - YES

Removes the up-scaling limitation on video resolution when this unit and a TV are connected via HDMI jacks. If a resolution supported by the monitor cannot be detected when configuring the up-scaling settings, this setting will remove the output limitation.

YES (Default)	Video output signals of a resolution not supported by the TV will not be transmitted.
SKIP	This unit ignores the TV's support capability and transmits input video signals to the TV.

Changing FM/AM frequency steps (R, L models)

TU - AM9/FM50

You can select one of the following FM/AM frequency steps:  1

AM10/FM100	You can adjust the AM frequency by steps of 10kHz and FM by steps of 100kHz.
AM9/FM50 (Default)	You can adjust the AM frequency by steps of 9kHz and FM by steps of 50kHz.

 1 : For details on setting FM/AM frequency steps, refer to “FM/AM tuning”.

Initializing various settings for this unit

INIT- CANCEL

Initializes various settings stored in this unit and sets it back to default.

Select the items to be initialized from the following.
